HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

MAIN RESULTS

- Two carpenters hoards in Malia (Quartier Mu) appear to be well attested woodworking toolkits both typologically and by tool association. Lithic tools are a complementary association (Karimali 2008) to metal toolkits for woodworking (Loescher 2021).
- Tool hoards alone are not a significant proof for a workshop (Evely 1988) they should rather be considered as toolkits (Procopiou 2013) stored pending future use. They can create a workspace "wherever [they are] laid" (Gorgues 2017)
- A first referential of archaeological and experimental traces.
- No woodworking related traces could be identified, but manufacture traces such as polishing marks and indirect percussion (teeth setting) were recognized.

AN ONGOING RESEARCH PROJECT

A PhD Thesis started in 2021 on "Woodworking in Minoan Crete (3200-1100 B.C.) : tool hoards, contexts and technology" with the aim to expand the investigation method to all 26 Cretan hoards previously identified as potentially related to woodworking.

CARPENTER HOARDS IN MINOAN CRETE, TOOLS FOR WOODWORKING ? TECHNOLOGICAL AND FUNCTIONAL STUDY OF COPPER ALLOY TOOLS FROM MALIA

INTRODUCTION

How may we study woodworking when the material is not preserved in the archaeological record?

During the Bronze Age in Crete (3200-1100 B.C.) there are hoarding practices of metal tools within the settlements (Blackwell 2018). 13 of them have been referred to as "carpenter's hoards" (Branigan 1969 ; Deshayes 1960 ; Evely 1993 ; Poursat 1985). From a first synthetic study (Loescher 2020) we identified a larger panel of 26 "tool kits" (Procopiou 2013) potentially related to woodworking. These attributions, which are based on typology and associations within the assemblages, remain however uncertain. The difficulties are due to the versatility of the tools and the use of the same techniques (sawing, cutting) in wood, stone and bone working.

This research therefore questions the functional attribution of metal tool deposits in Minoan Crete through a use-wear and an experimental approach.

METHODS

Use-wear analysis

Application to metal artifacts is a recent field in archaeological research (Dolfini, Crellin 2016 ; Kienlin, Ottaway 1998)

Referential of traces used (Gutiérrez, Munoz Moro 2020 : table 1).

Material : Optical Microscope Dino-Lite (x20 and x50).

Experimentation

6 saws whose versatility is known from their archaeological context (Poursat 1996).

Recent developments of archaeological experiments around tools in the aegean world (Maragoudaki, Kavouras 2012 ; Maragoudaki 2019 ; Löwe Fri 2011)

Collaborations with :

- François Allier (Fonderie de l'Oppidum) for the reproduction
- LTDS (Tribology and Systems Dynamics Laboratory UMR 5513) for analysis

SAMPLE STUDIED

CONTEXTS

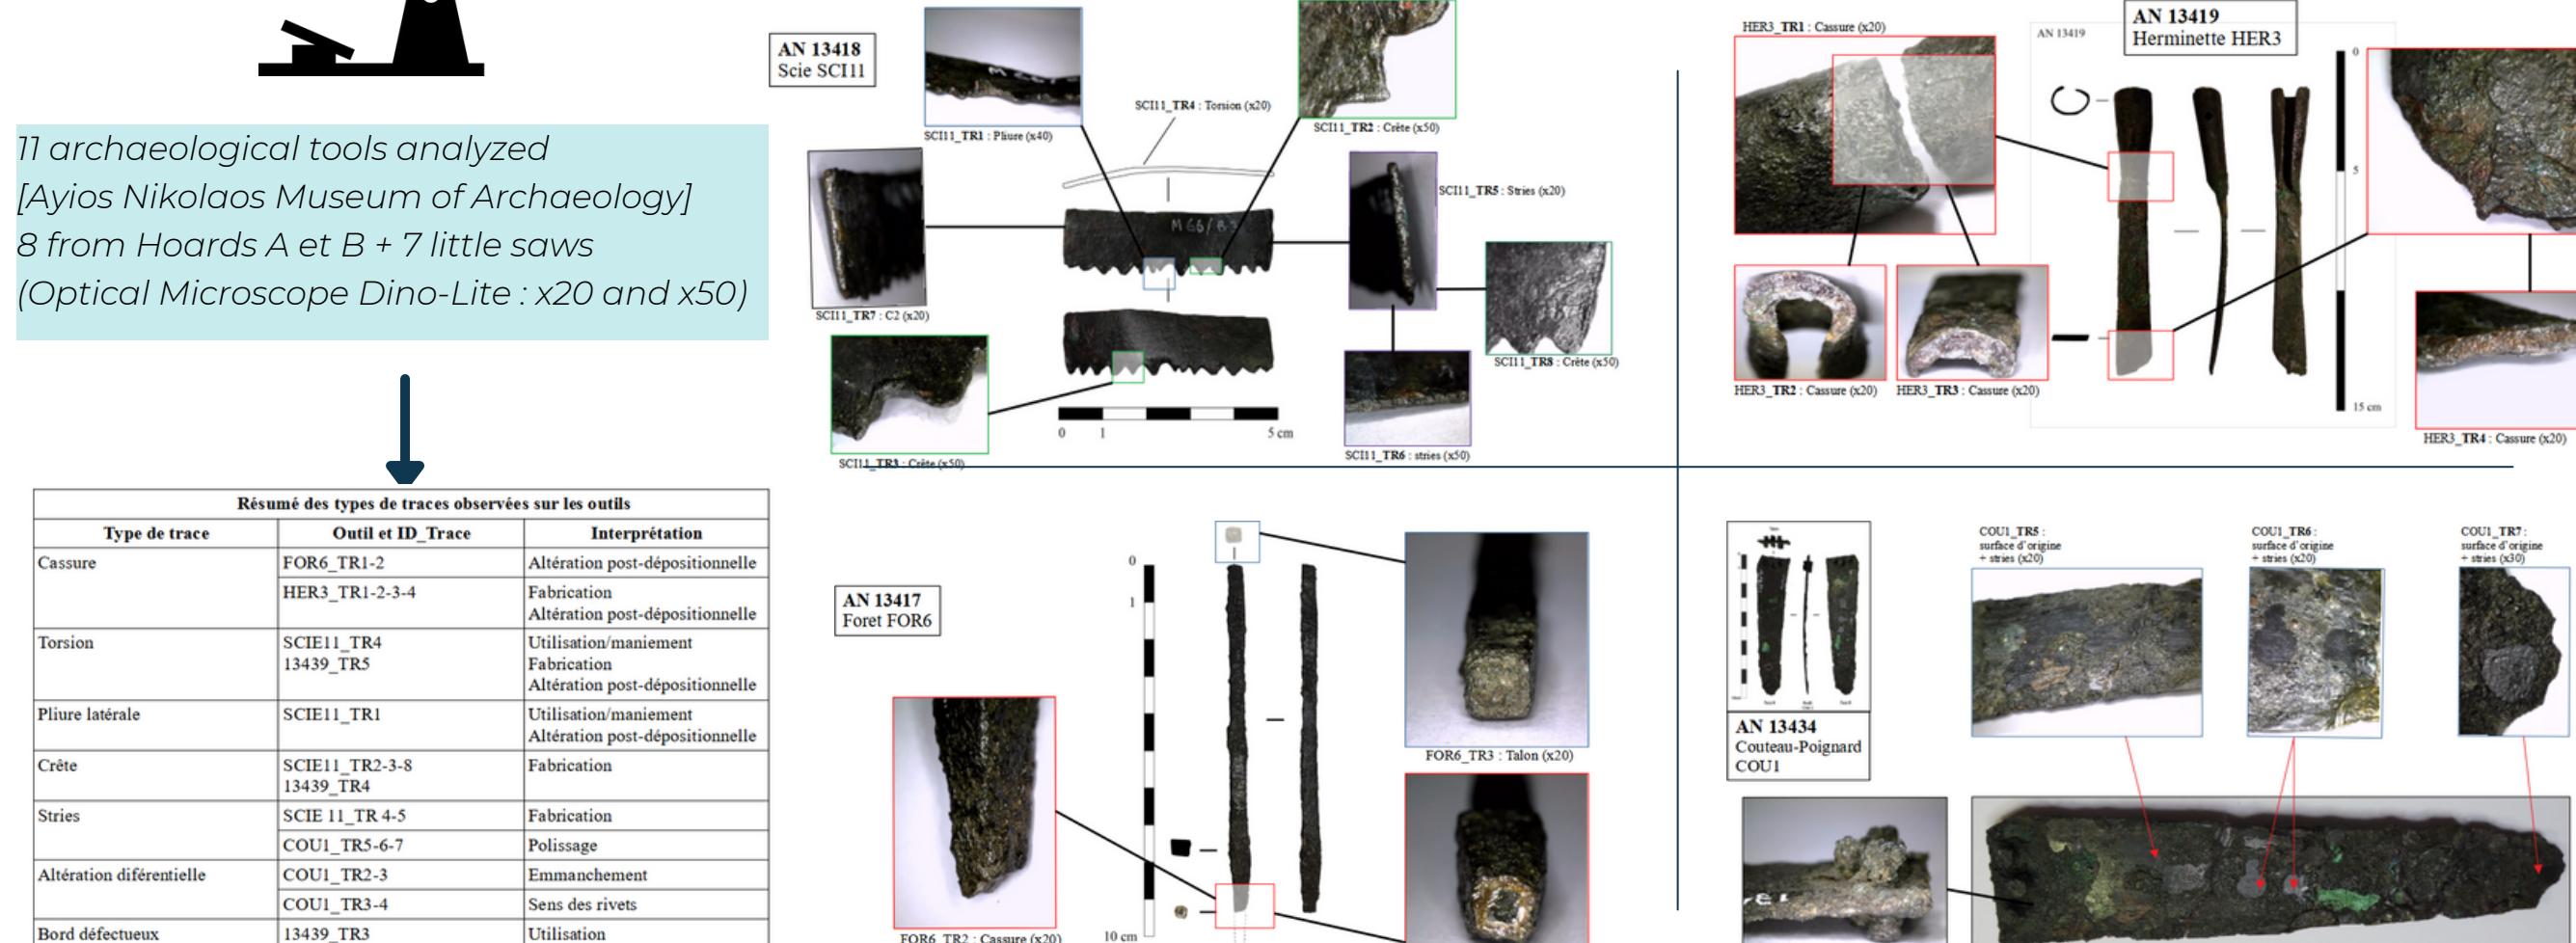

Malia, Quartier Mu (Hoards A I9 et B IV4) :

- 2 "administrative" buildings
- MM II (~1700 B.C.), destruction layer
- fallen from upstairs
- only tools ; typologically related to woodworking (modern parallels)
- association of lithic and metal tools

USE-WEAR ANALYSIS ARCHAEOLOGICAL TOOLS

6 versatile small saws reproduced and tested

Saw model from Quartier Mu, Hoard A et B (Evely 1993 : type 1)

3 different materials :

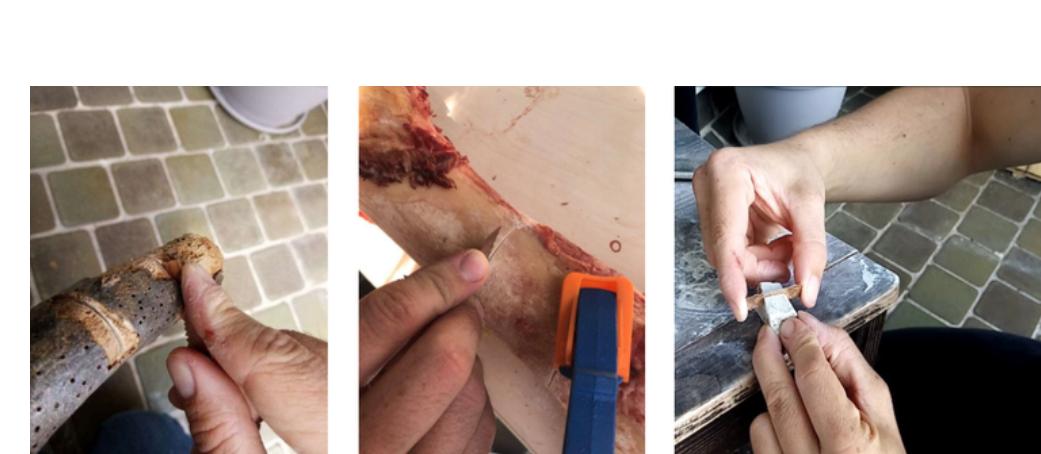

- wood (olive tree)
- bone (bovid)
- soft stone (steatite)

2 variables :

- bronze alloy (tin 3% and 8 %)
- worked material

3 sessions of 30 min work, observations carried after each session

EXPERIMENTATION

Type de trace	Outil et ID, Trace	Interprétation
Résidus	SE3-1_TR1	Utilisation
	SES-2_TR1; SES-3_TR2	Dépot lié au travail du bois
	SES-3_TR1; SES-3_TR2	Utilisation
Émoussé	SES-2_TR1; SES-3_TR1; SES-3_TR2	Dépot dans le cuir et de chaire
Entaille et pliure latérale	SE3-2_TR1; SE3-2_TR2	Utilisation
	COU1_TR4 Altération différentielle	Dépot de poudre de stéatite
Stries	SE3-2_TR1	Utilisation
	SE3-3_TR2	Mise en évidence des dents à la cassure
	COU1_TR4 Altération différentielle	Fabrication
	COU1_TR4 surface d'érosion + résidus	Martelage
	COU1_TR4 surface d'érosion + résidus	Utilisation
