

## Appendix A: Propagation transects

Pictures of both propagation transects are shown in Table A-1 and A-2. The camera pointed in the direction of the microphone at about 1.5m above the ground. Vegetation is slightly denser in the Neotropical rainforest with more foliage. The maximum visibility is about 10m in both forests.

*Table A-1 : Vegetation and landscape at each step along the 100 m propagation transect in the Neotropical rainforest (French Guiana, France). No measurement was performed at 2 and 5 m (gray rectangles).*

*Table A-2 : Vegetation and landscape at each step along the 100m propagation transect in the Alpine coniferous forest (Jura, France).*
