Fig. SM1. (a) Temperature variation of specific heat  $C_P$  of  $\text{UNi}_{0.34}\text{Ge}_2$  together with the estimated phonon contribution  $C_{\text{ph}}$  (based on the parameters described in the article). (b) Non-phonon part of the specific heat (left axis, orange dots), defined as  $C_{\text{el+magn}} = C_P - C_{\text{ph}}$ , and the non-phonon entropy  $S_{\text{el+magn}}$  as a function of  $T$  (green line).
