HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Context: An environmental sustainability framework

The planetary boundaries framework shows the current unsustainability of our societies: **6 of the 9 limits guarantying a safe operating space (SOS) for humanity have been crossed in 2022.** Facing this massive issue, institutions all over the world address the necessity to build collectively the transitions toward sustainability: IPCC/IPBES reports, European Commission reports, SNBC and RTE/ADEME scenarios in France. In engineering, scientific methods to support the anticipation capacity of product designers in an upscaling context are lacking.

Therefore, designers should be better equipped to follow sustainable strategies by assessing the sustainable potential of an emerging technology before its upscaling in an environmental perspective.

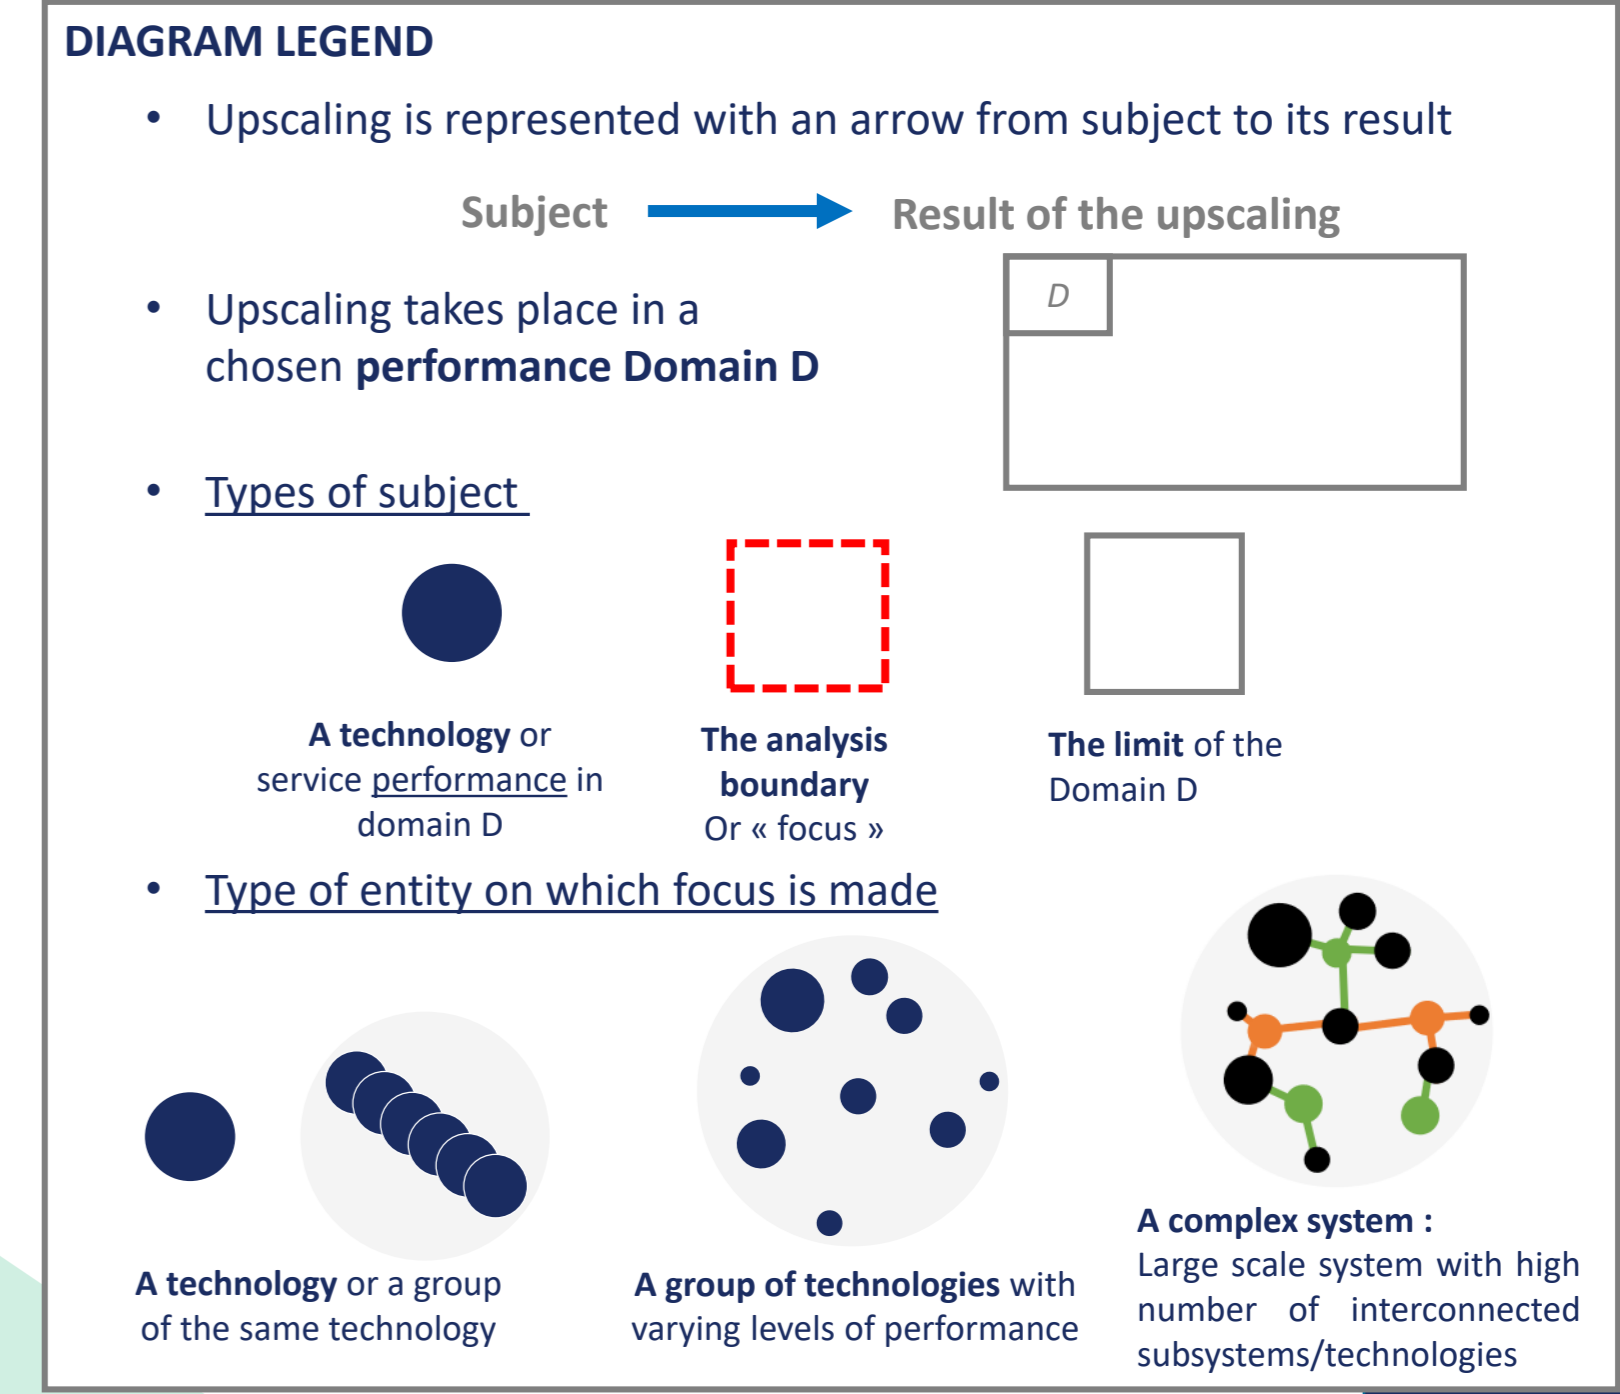

State(s) of the Art and research questions

The term "upscaling" is polysemic in the literature: A characterization requirement.

RQ 1 : What is an upscaling and how to environmentally assess it?

Characterization framework
 Riondet L, Rio M, Perrot-Bernardet V, Zwolinski P. 2022. For an upscaling assessment integration in product. 32th CIRP Design Conference.

Maturity of the definition and assessment methodologies for designers

5 archetypes of upscaling have been identified in the literature.

Paper Riondet et al. (2023) in preparation. Upscaling of emerging technologies and environmental assessment: review and perspectives for designers and LCA practitioners.

RQ 2 : How to integrate the upscaling assessment expertise in the design process? Eco-design approach !

SubRQ1.1: What should be the scope of such a prospective analysis ?

SubRQ1.2: What are the prevalent phenomena to focus on? Which metrics/indicators to describe them?

Case study: LCA applied to the upscaling of photovoltaic systems

Perspectives

- Application of different LCA modes (dynamic, prospective, absolute, regionalized) to assess the upscaling of PV systems,
- Validation of the LCA methodology (scope, metrics),
- Development of a designer-oriented tool on
