HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Characterization of a multilayer x-ray waveguide by x-ray diffuse scattering and grazing incidence x-ray fluorescence

Geometry of the **diffuse scattering** experiment and scattering curves measured at 10.25 keV. The detector is at 2° from the incident direction. (a): whole scanned range. (b): angular range where the guided mode feature is present. (c): comparison between experiment (solid line) and simulation (dashed line).

X-ray emission spectrum of the sample measured by a SDD (left). Comparison of the experimental (solid-dotted line) and simulated (dashed line) **GIXRF** curves of W La (a) and Zr La (b); (d) W La and W Mb curves plotted on a common intensity scale. Measurements are performed at 10.25 keV.

Conclusion

	Thickness from design (nm)	Thickness from GIXR - XDS (nm)	Diffuseness from GIXR - XDS (nm)	In-plane correlation length (nm)
Al	5	7 ± 1	2.8 ± 0.2	20 ± 10
ZrC	7	8.0 ± 0.5	2.8 ± 0.2	30 ± 5
Al	15	20 ± 1	2.8 ± 0.2	20 ± 10
W	50	50	-	-

The combination of diffuse scattering and GIXRF results puts constraints on the fit process and makes us expecting a precise description of this Al/ZrC/Al/W planar waveguide.
