HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Views on green hydrogen, from a middle income country

Dr. Minh Ha-Duong

Vietnam Initiative for Energy Transition

COP27 side event

*Green hydrogen: how to reconcile North/South stakes in the
development of the future market*

2022-11-16

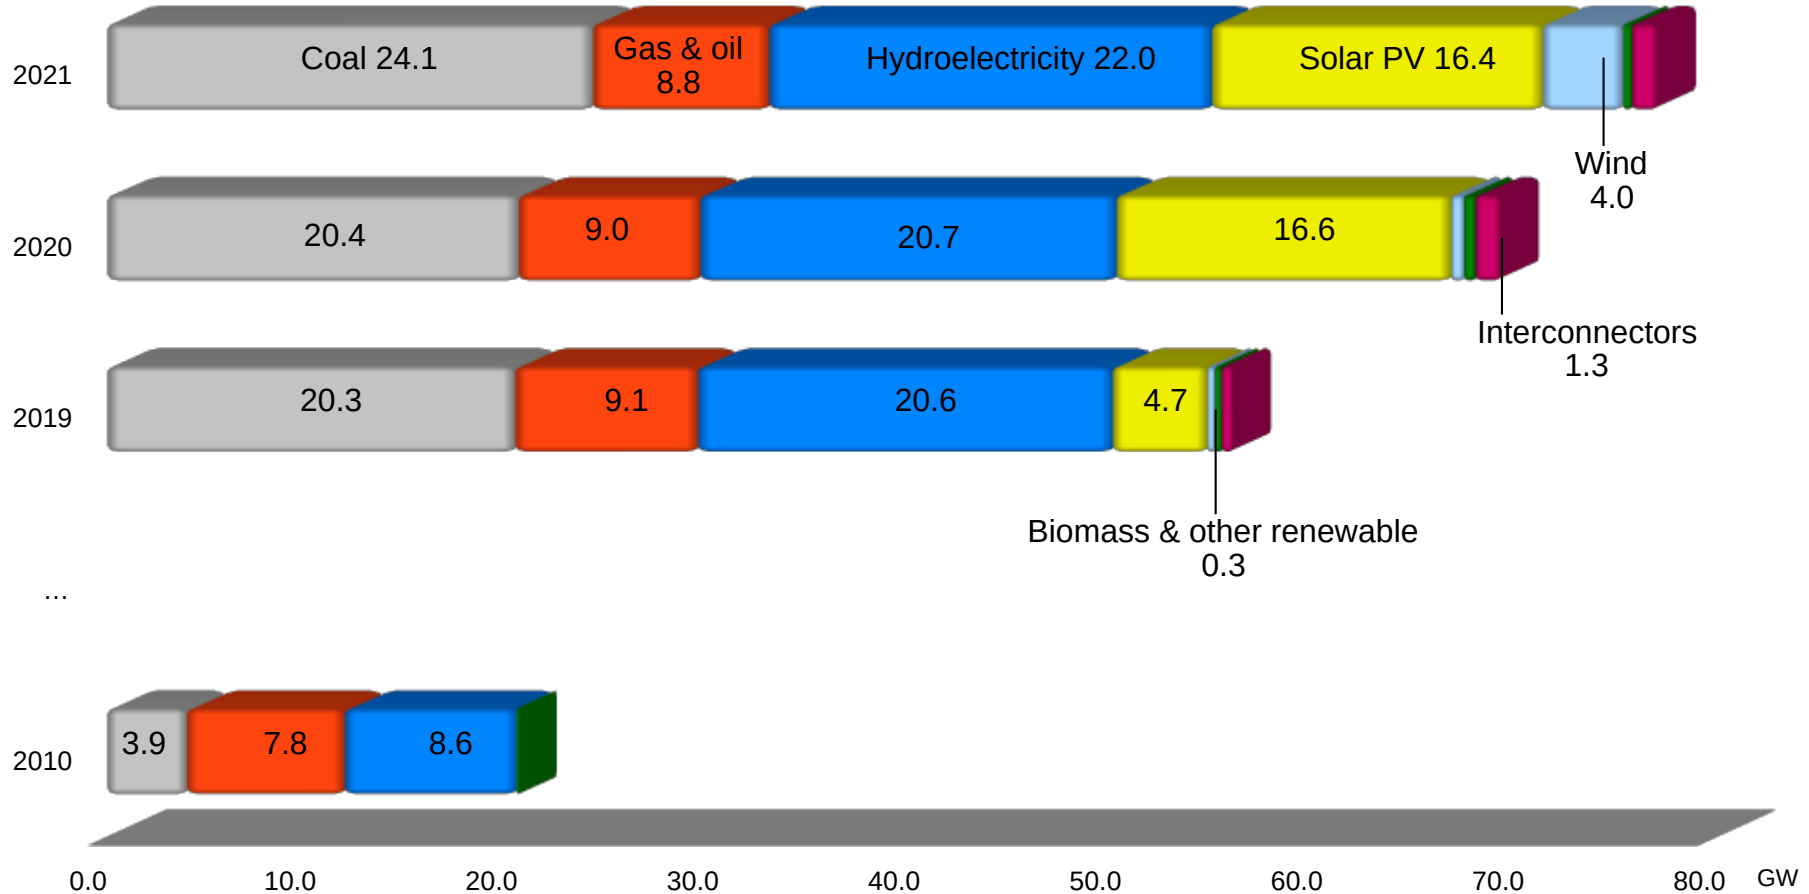

Vietnam aims to achieve net-zero carbon emissions by 2050

CO2 emissions of Vietnam by source

Annual carbon dioxide (CO₂) emissions from different fuel types, measured in t per year.

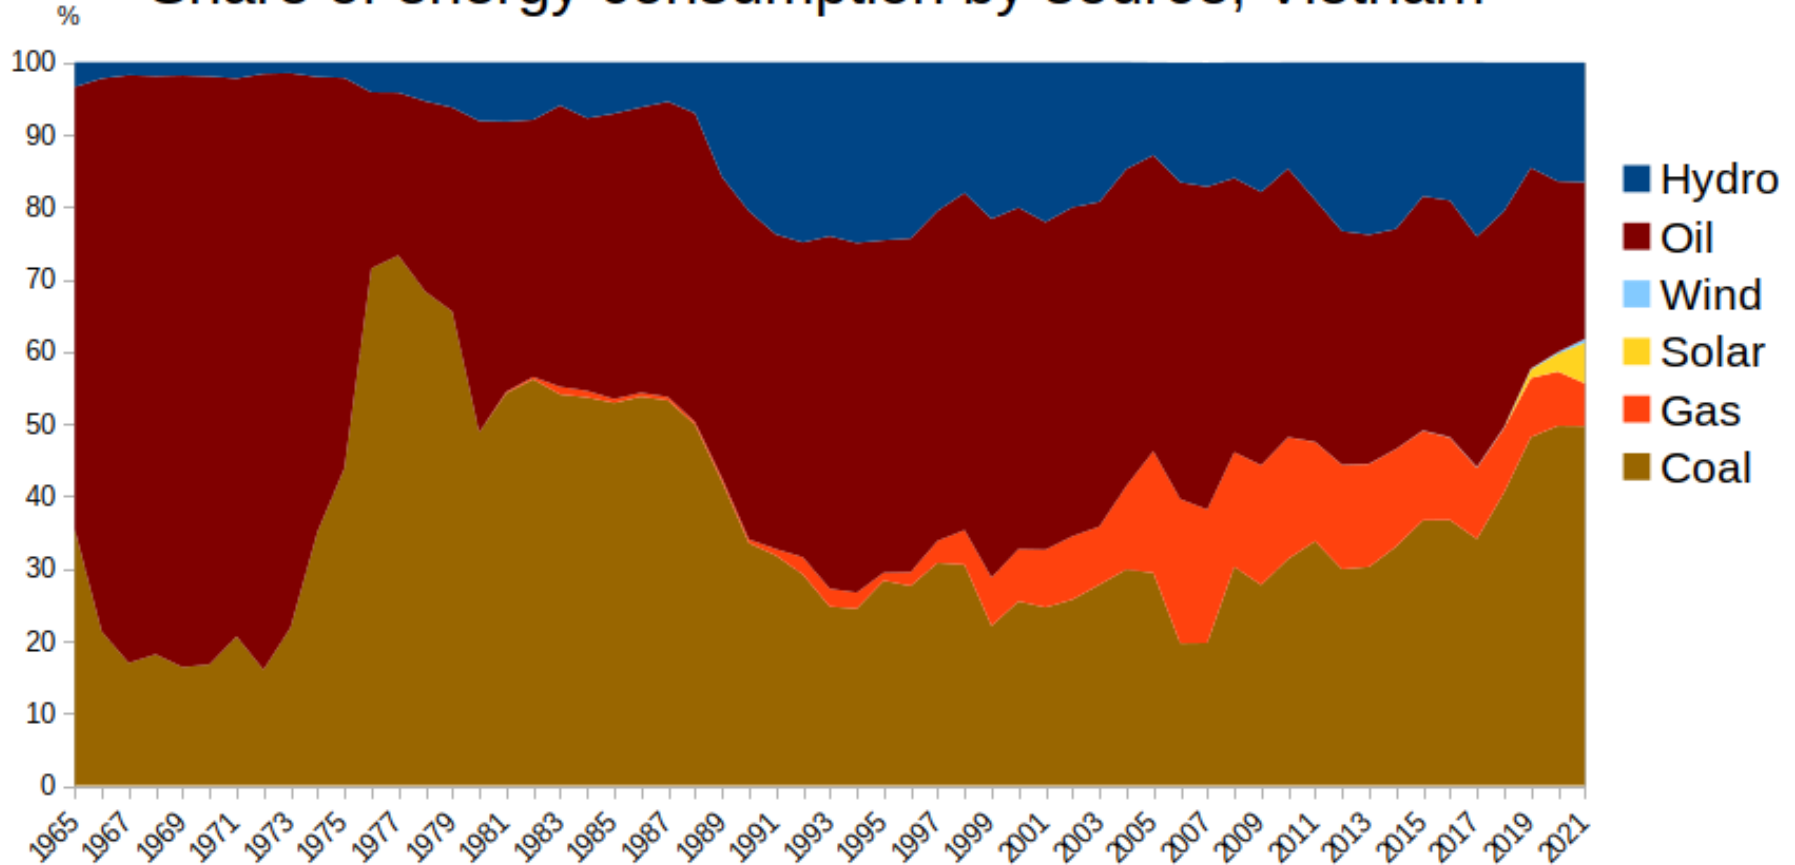

Vietnam installed 40GW of power generation capacity in 2010-2021

Share of energy consumption by source, Vietnam

Power Plan 8

Draft 6328

MW		2020	2030 _{recommended}
PMax		38.617	93.343
Hydro		20.993	28.946
Coal	+10GW	21.383	30.127
Gas	+30GW	7.422	38.830
Oil & flexible engines		1.603	300
Wind		538	28.480
Solar		8.751	11.164
Solar rooftop, <i>at least</i>		7.755	10.755
Biomass + cogeneration		325	5.170
Interconnectors + storage		572	7.700
Total installed capacity		69.342	159.044

P = 45.528 MW
on 2022-06-21

Hydrogen in the proposed power plan

In 2035, start cofiring biomass, NH₃, H₂.

In 2050:

100% biomass, NH₃ coal plants = 25 GW

100% H₂ gas power plants = 31 GW

But H2 may not be affordable
for the power sector

Vietnam needs a national H2 strategy

Principles: national security,
competitiveness and carbon neutrality.

Conclusion

Priorities for a national H2 strategy

1. Decarbonize existing production
2. Grow it to meet domestic demand
3. Produce locally cheaper than imports

Thank you!
