## Appendix D - Description of the ageing studies, ordered by walking task.

Abbreviations: years old: $y$; male: $m$; female: $f$.
Shading: not reported
Risk of bias: - Low, © Moderate, - Serious
Assessment of participant status:

- Fall history:
- $\checkmark$ if fall history preceding the measurement was assessed
- $x$ if fall history was assessed and fallers excluded from the study; in this case, we indicate the older adults as being at low fall risk.
- Physical/mental level:
- $\checkmark$ if physical/mental level was tested
- $\mathbf{x}$ if physical/mental level was tested and subjects with low (respectively high) fitness were excluded from the study; in this case, we indicate the older adults as being at low (respectively high) risk.
Medicine usage
- $\checkmark$ if participants took medication during the measurement period
- $\mathbf{x}$ if participants did not take medication during the measurement period

Measurement devices: if force platforms or infrared cameras were used, but their number was not reported, this is indicated by $\checkmark$
Task description: Expected:

- $\mathbf{x}$ if unexpected changes in the task occurred from trial to trail (for example: if various obstacles or stairs were used and these were presented in random order, or if perturbations occurred at random times)
- $\checkmark$ otherwise
