Submitted on 30 May 2023

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

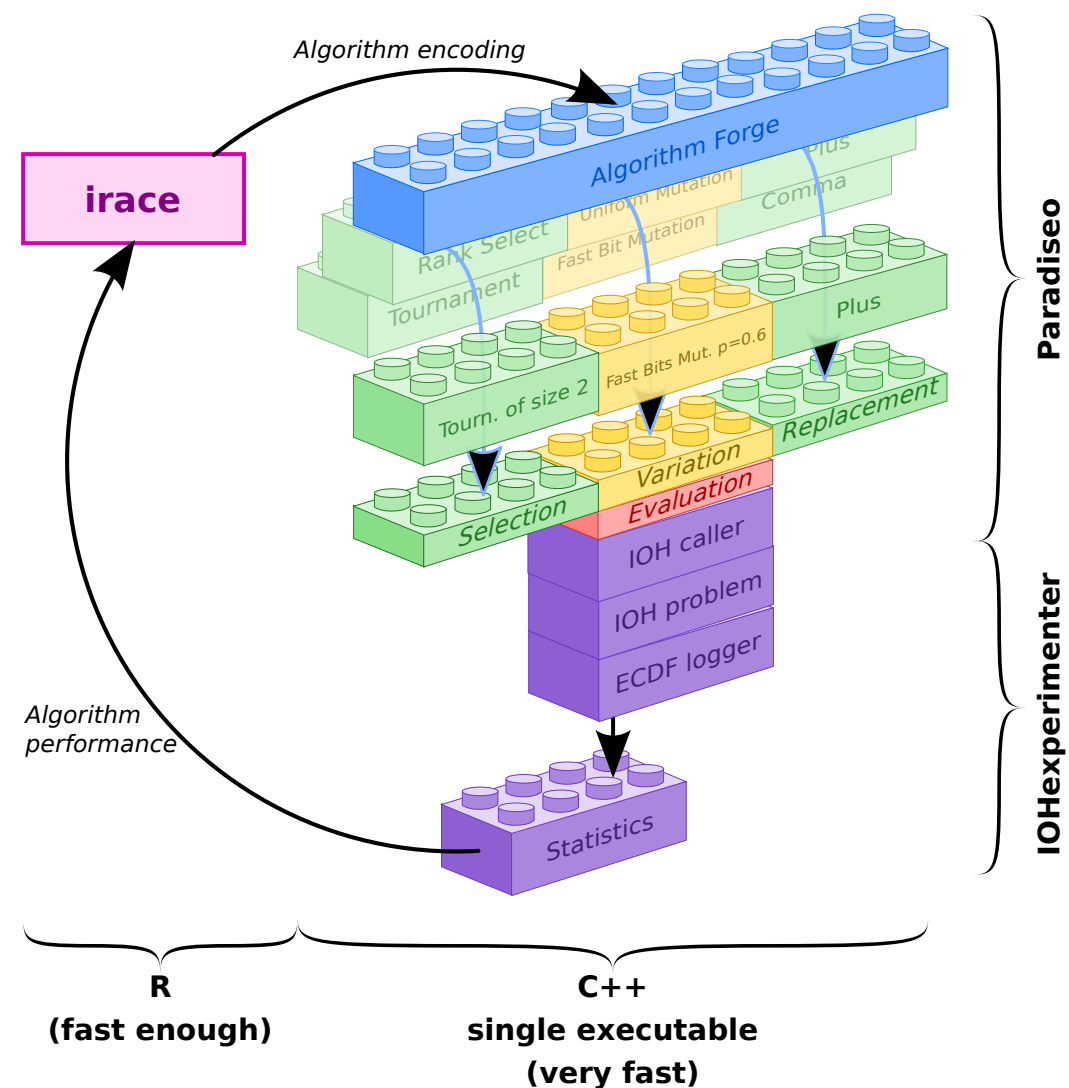

Using Irace, Paradiseo and IOHprofiler for Large-Scale Algorithm Configuration

Johann Dreo, Carola Doerr, Amine Aziz-Alaoui, Alix Zheng

1. Fast Automated Pipeline

100 000 runs for each of 19 problems
in 3 hours on a laptop

(at least 10 times faster than optimized C/Python/Numpy counterpart)

Very fast runs,
 very expressive models,
 (for algorithms and performance)
 standardized results data,
 that can be easily explored,
 Open-source.

2. Killer Features

- Large set of Parametrized Components
- +
- Large Algorithms Families
- +
- Expressive Benchmark Generators
- +
- Expressive Performances Statistics
- +
- Automatic Configurator Interface
- +
- Comprehensive Behaviour Logging
- +
- Data Export to Interactive Analyzer

3. Example

Algo. : FastGA $\approx 6e8$ algorithms
 Bench.: W-models = 19 problems w. invariance instances
 Stat. : 2D Quality/Time log ECDH volume

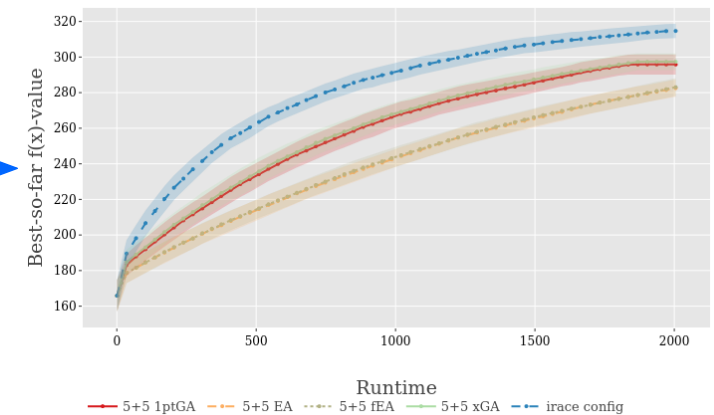

Per-instance configuration with irace.

4. Results

Elite algo outperforms baselines

Elite operators vary across problems

Op. index	Problem 5										Problem 17										All problems												
	0	1	2	3	4	5	6	7	8	9	10	0	1	2	3	4	5	6	7	8	9	10	0	1	2	3	4	5	6	7	8	9	10
Pc	5	6	1	3											1	14							18	74	56	57	65						
SelectC	1		5	2		4	3							15									18	16	141	19	18	30	28				
Crossover	1	5	2	2	1	1				1	2			15									11	29	78	24	6	8	11	19	18	23	43
Pm			2	3	10											15							4	9	25	49	183						
SelectM			14				1					6	2	1	2	2							26	17	61	36	27	41	62				
Mutation	2	5		1	1	2	4												1	9	4	1	2	7		3	1	2	6	10	62	81	96
Replace	15											15											245	2	3	6	2	1	2	5	1	3	

5. Perspectives

- Interfaces toward other configuration solvers.
- Even larger studies.
- Even more algorithms/operators.
- Even more benchmarks.
- Grammar-based/bottom-up framework.
- Assessing the contribution of new ideas in interplay with operators and parameters.
- Stop thinking of "algorithms" and think of "combination of parametrized operators".
