A. Supplementary Figures

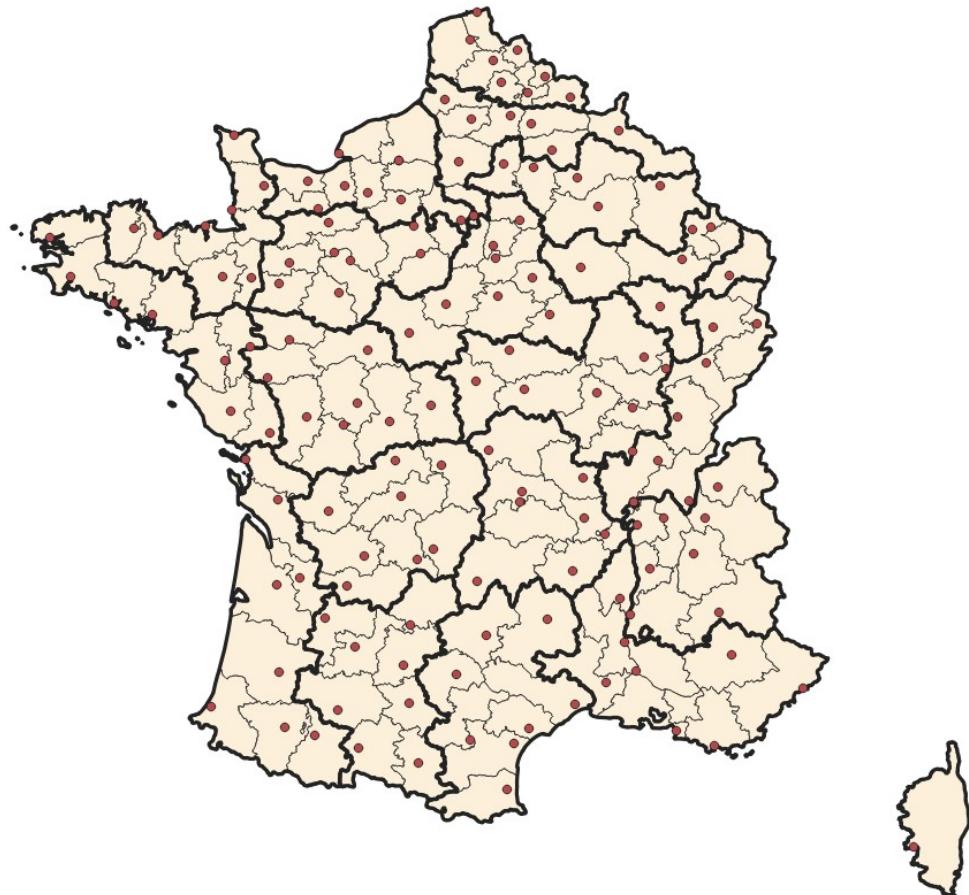

Figure A.1. Military Regions, Subdivisions, and Recruitment Bureaus in 1914

Notes: This figure displays the geography of military regions (thick black lines), subdivisions of military regions (thin black lines), and recruitment bureaus (red dots) in August 1914. Shapefiles from Gay (2020).

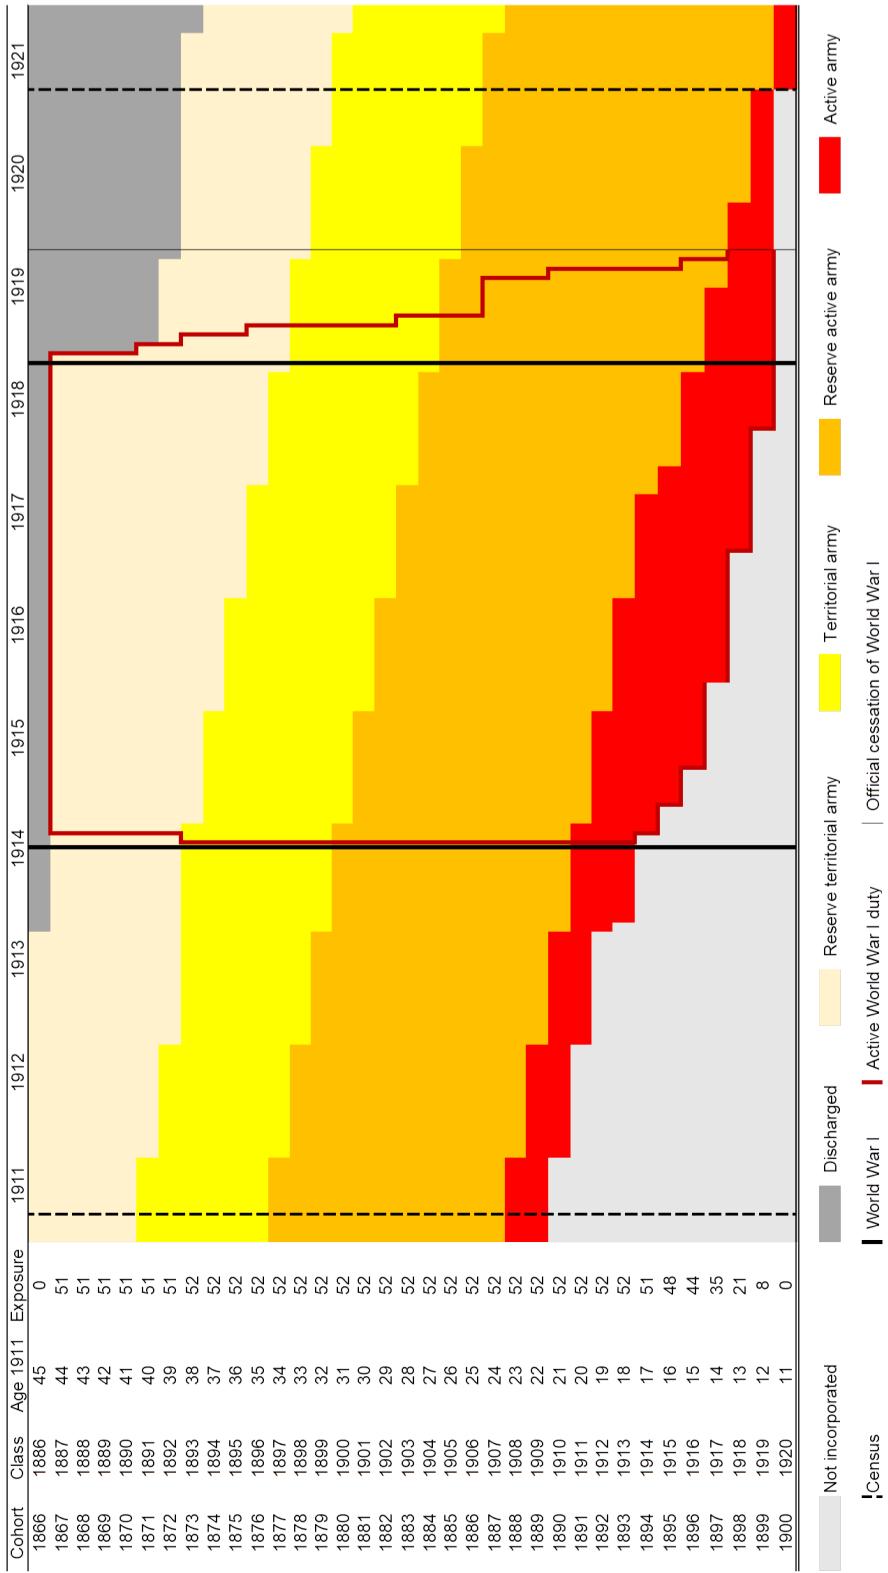

Figure A.2. Military Duties by Cohort (1911–1921)

Notes: This figure displays the evolution of military obligations by cohort between 1911 and 1921. *Class* corresponds to the year in which men were drafted, at age 20. *Exposure* corresponds to the number of months a cohort was actively engaged in World War I, between August 2, 1914, and October 23, 1919. The thick red line displays the timing of active World War I duty, which, for most cohorts, lasted beyond the Armistice of November 1918.

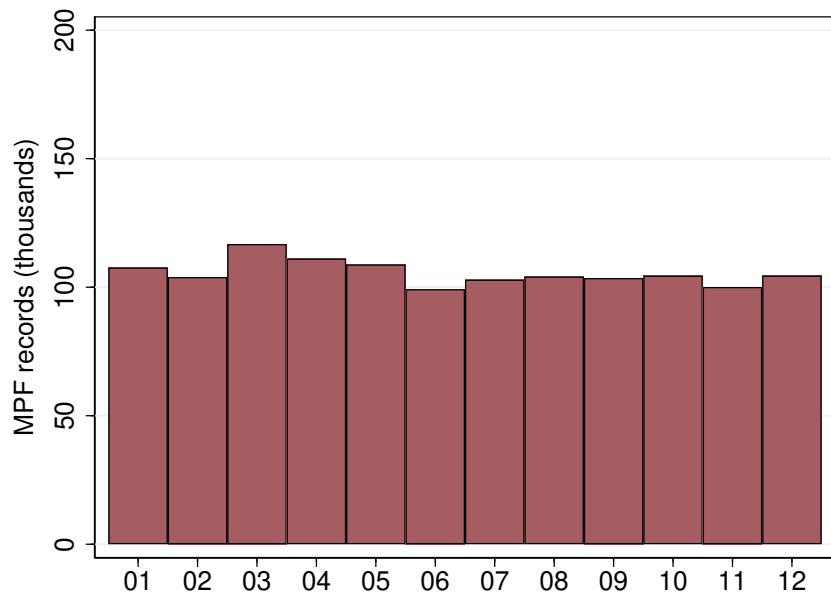

Figure A.3. Distribution of Months of Birth Among MPF Records

Notes: Each bar represents the number of MPF records that were born in a given month. This figure is based on 1,267,189 MPF records for which the month of birth is available.

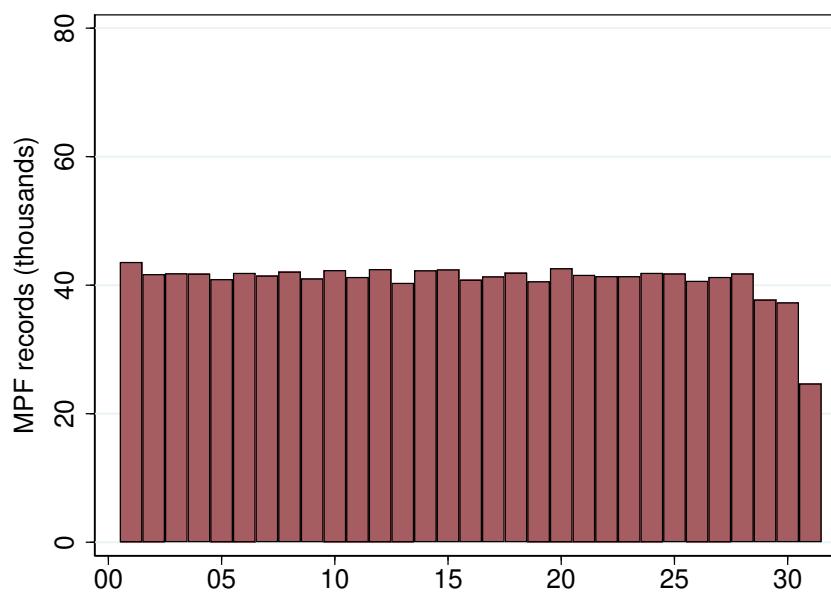

Figure A.4. Distribution of Days of Birth Among MPF Records

Notes: Each bar represents the number of MPF records that were born in a given day. This figure is based on 1,267,094 MPF records for which the day of birth is available.

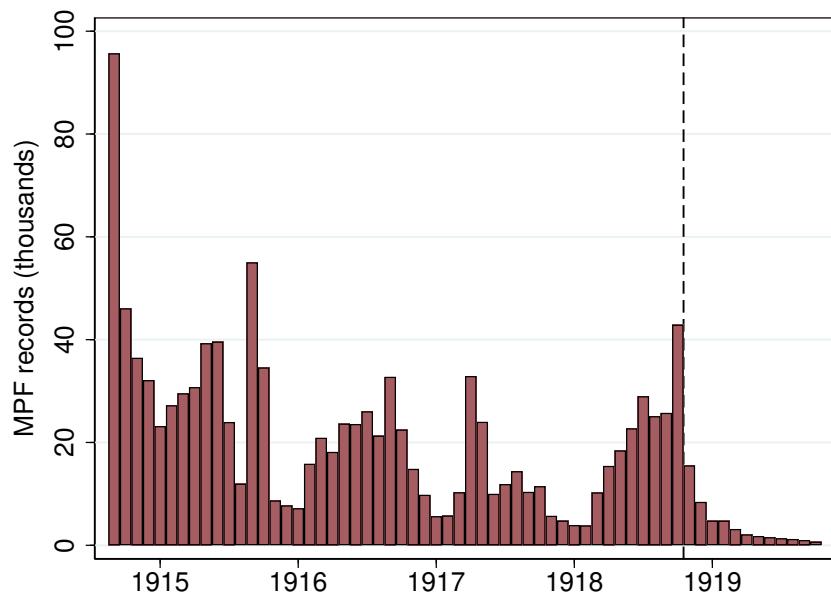

Figure A.5. Distribution of Monthly Deaths Among MPF Records

Notes: Each bar represents the number of MPF records that died in a given month. The vertical dashed line corresponds to the date of the Armistice on November 11, 1918. This figure is based on the 1,252,039 MPFs who died between August 2, 1914 and October 23, 1919.

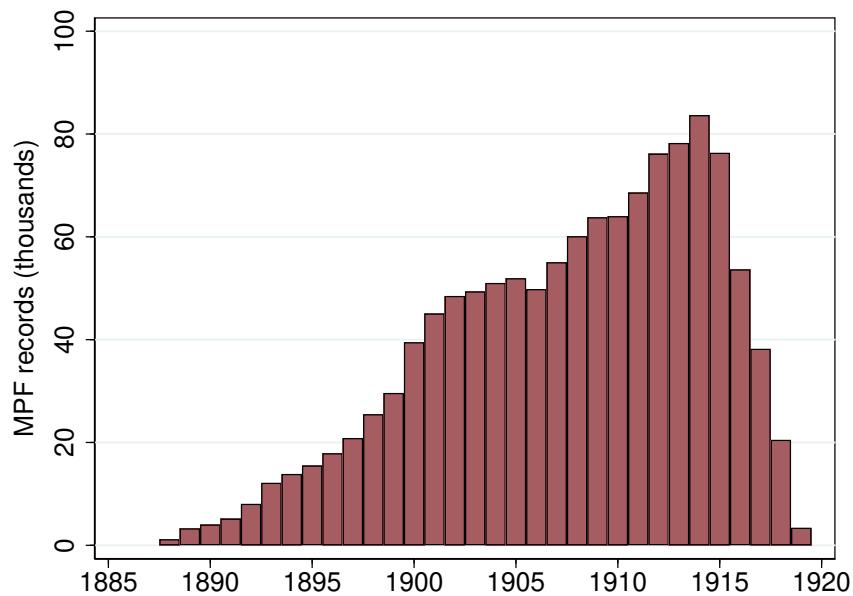

Figure A.6. Distribution of Recruitment Classes Among MPF Records

Notes: Each bar represents the number of MPF records that were recruited on a given year. This figure is restricted to the recruitment classes 1885–1920 and a total of 1,236,419 MPF records for which the recruitment class is available.

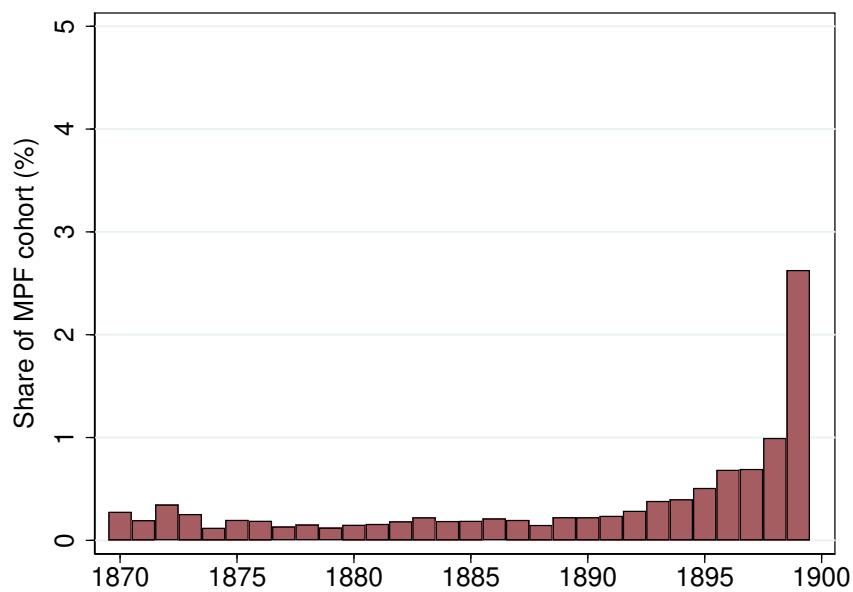

Figure A.7. Share of War Volunteers Across Cohorts

Notes: Each bar represents the share of MPF records of a given year of birth that was a war volunteer. This figure is restricted to the cohorts 1870–1899, for which there are at least one thousand MPF records. These represent 1,229,970 MPF records for which the recruitment class is available.

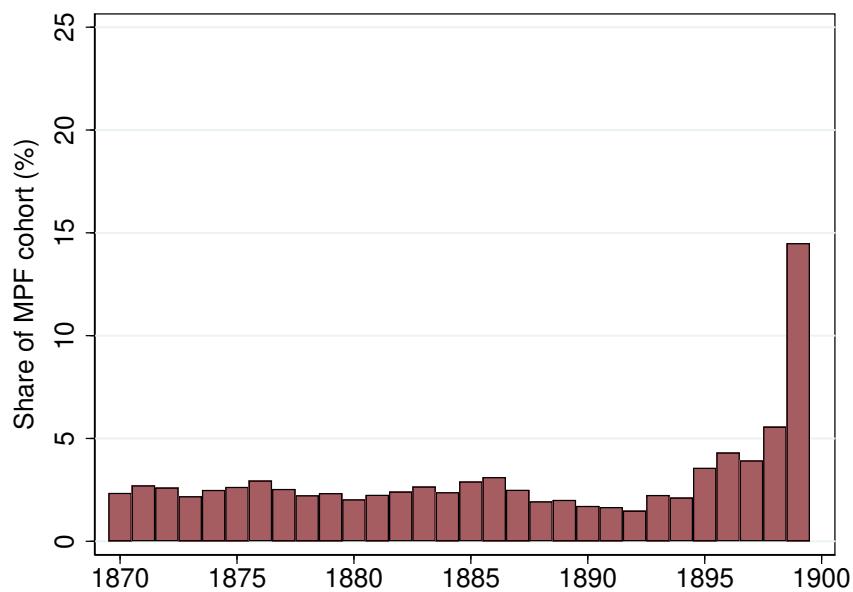

Figure A.8. Share of Early Recruits Across Cohorts

Notes: Each bar represents the share of MPF records of a given year of birth that was enrolled before age 20, outside of war volunteers. This figure is restricted to the cohorts 1870–1899, for which there are at least one thousand MPF records. These represent 1,229,970 MPF records.

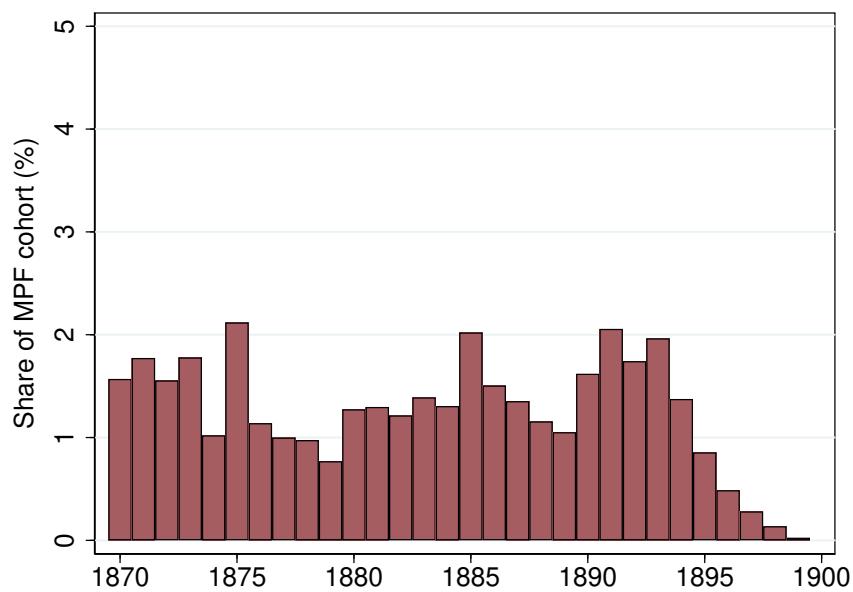

Figure A.9. Share of Exempted Across Cohorts

Notes: Each bar represents the share of MPF records of a given year of birth that was granted a deferment from military obligations at age 20. This figure is restricted to the cohorts 1870–1899, for which there are at least one thousand MPF records. These represent 1,229,970 MPF records.

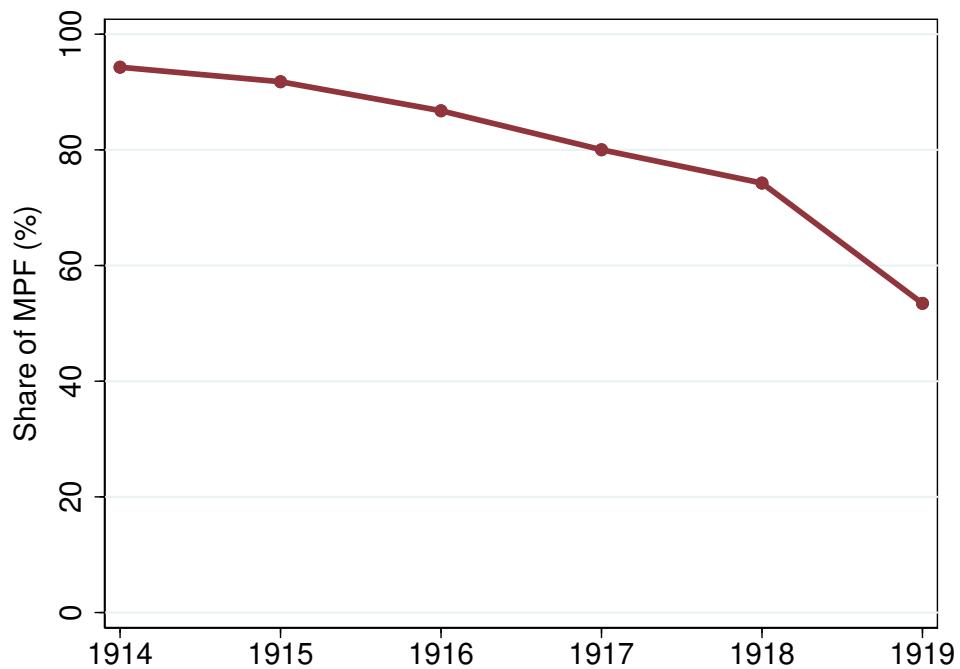

Figure A.10. Share of Infantry among MPFs

Notes: This figure displays the share of MPFs in the infantry who died before October 23, 1919, by year of death among MPF records for which the military unit and year of death are available. These represent 1,244,725 MPF records .

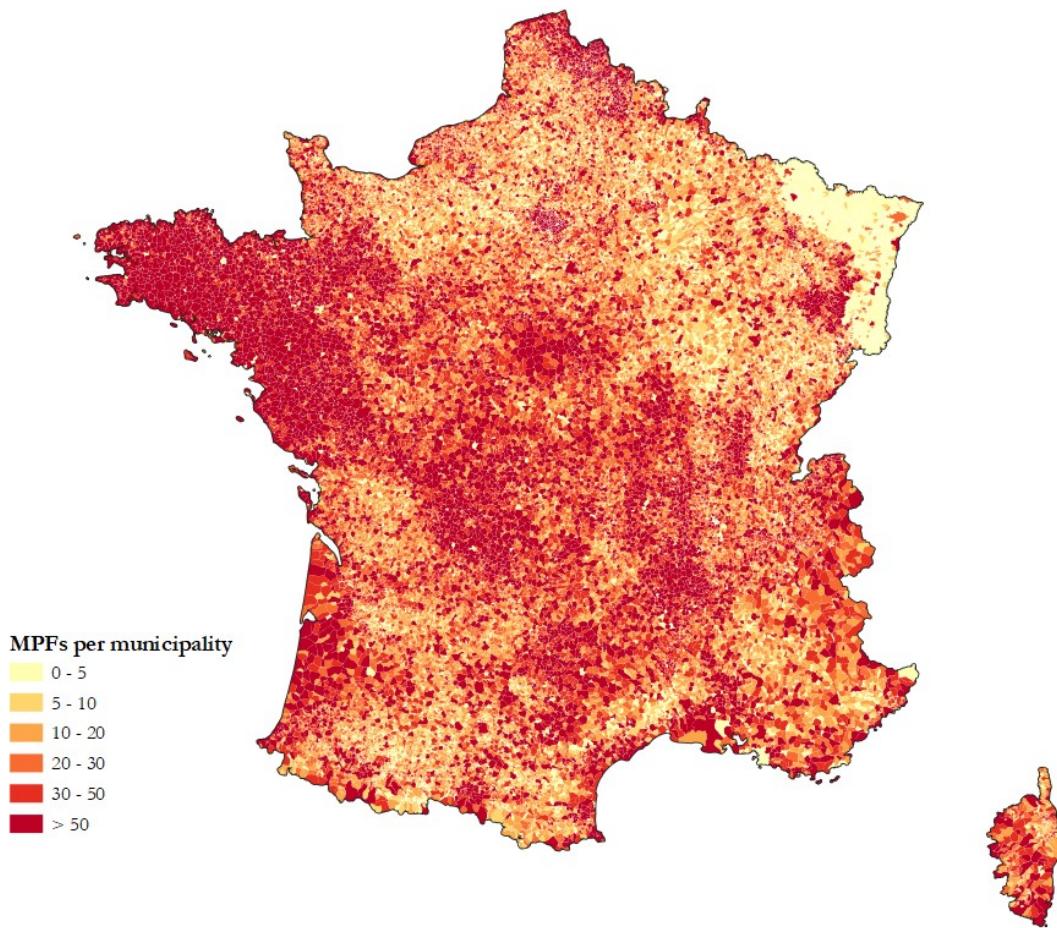

Figure A.11. Distribution of MPFs across Municipalities

Notes: This figure displays the distribution of MPFs across municipalities of birth in 2015 geography using IGN's (2015) Geofla shapefile. This figure is based on 1,258,553 MPF records for which the municipality of birth is available.

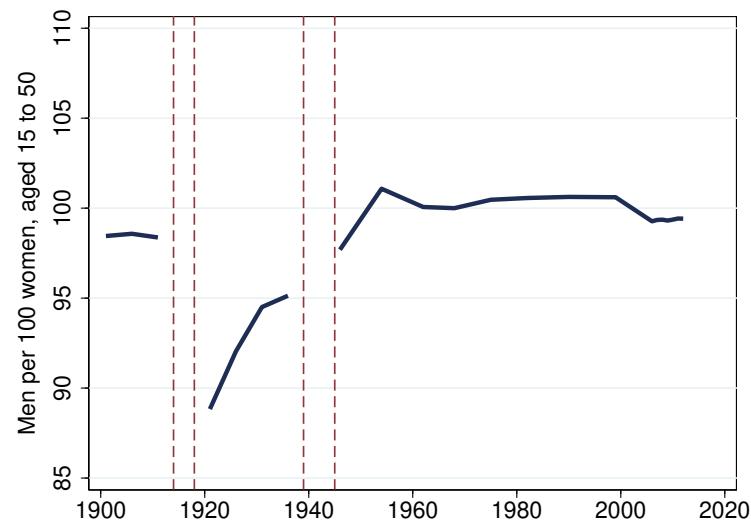

Figure A.12. Adult Sex Ratio (1900–2012)

Notes: This figure displays the sex ratio among French adults aged 15 to 50. Data are from the censuses 1901–2012. Vertical lines indicate WWI (1914–1918) and WWII (1939–1945). Figure based on Gay (2023, p. 5).

Notes: This table provides the list of the 40 most frequent municipalities in the MPF database in 1911 geography. While Paris appears as a single municipality in this table, MPF information is broken down across 20 municipal arrondissements in the database. Shares are in percent of all MPF records for which a municipality of birth is available (1,262,500).

Notes: This table provides the distribution of unique municipalities in the MPF database. *Occurrences* refers to the number of times a unique municipality appears, while *Frequency* refers to the number of municipalities in each group. Shares are in percent, and are relative to the total number of unique municipalities with at least one MPF (35,528).

Notes: This table provides the département-level number of MPFs and military death rates in Boehnke and Gay (2022) (*BG2022*) and in the present study (*GG2023*). The GG2023 MPF data is restricted to non-civilian male MPFs born in France outside Alsace-Lorraine for which the département of birth is known and who died between August 1, 1914 and October 23, 1919. Military death rates are in percent and are calculated by dividing the number of MPFs by the number of men aged 15–44 per the census of 1911. The BG2022 data are from Boehnke and Gay (2020).

Notes: This table provides the list of the municipalities with the highest military death rates. The data are based on MPFs born in France (outside Alsace-Lorraine), for which the municipality of birth is known and who died between August 1, 1914 and October 23, 1919. Military death rates are in percent and are calculated by dividing the number of MPFs by the municipality's population in 1911.

Notes: This table reports OLS coefficients from regressing survival duration (in days) between August 2, 1914 and the date of death, on individual MPF characteristics. The sample consists of non-civilian MPFs of the cohorts 1866–94 born in mainland France outside of Alsace-Lorraine who died between August 2, 1914 and November 11, 1918. The excluded category for military type is **Infantry** and for military rank, **Enlisted**. Robust standard errors are in brackets.

*** Significant at the 1% level. ** Significant at the 5% level. * Significant at the 10% level.
