## Highlights

- A specific protein signature is associated with high lipolysis levels in cow milk
- CD5L and GP2 in skim milk are putative biomarkers of lipolysis
- CUL9, SURF4 and HID1 are associated with low levels of lipolysis in skim milk
- LPL inhibitors contribute to explaining low lipolysis levels observed in cow milk

**Abstract**

Spontaneous milk lipolysis refers to the breakdown of triacylglycerols in milk. Lipolysis impacts the organoleptic value of milk by causing off-flavours and reduces the technological properties of milk. Lipolysis is caused by lipoprotein lipase (LPL), a tightly regulated enzyme in milk. Our objective was to identify robust biomarkers of lipolysis and putative regulators of LPL enzyme in bovine milk. To achieve this goal, we used feed restriction as a lever to generate highly contrasted samples with regard to milk lipolysis. We combined statistical methods on proteomics data, milk lipolysis and LPL activity values. Following this strategy, we identified CD5L and GP2 as robust biomarkers of high lipolysis in cow milk. We also identified HID1, SURF4 and CUL9 as putative inhibitors of the lipolytic process in the milk. We thus proposed 5 putative biomarkers to be considered in future tools to manage milk lipolysis.

**Keywords**

Dairy cows, lipolysis, lipoprotein lipase, milk fat, milk proteins, biomarkers

**Introduction**

Fat is present in milk as fat globules, a supra-molecular structure made of a triglyceride core surrounded by a complex membrane called the Milk Fat Globule Membrane (MFGM). In freshly secreted milk, the MFGM is intact and forms an effective barrier that protects fat from the action of milk lipases, with an efficiency that can vary according to the molecular composition of the membrane [1]. In addition, in some cases such as agitation, pumping or homogenization of milk, this membrane is damaged and lipases are able to reach the triglyceride core causing lipolysis [2]. Milk lipolysis, that is, enzymatic degradation of milk triglycerides into free fatty acids by the lipoprotein lipase (LPL; EC:3.1.1.34), severely impairs milk quality from both the organoleptic and the technological points of view. Off-flavours originating from free fatty acids and their oxidation products in milk are not appreciated by consumers. Moreover, the presence of partial triglycerides in milk impairs its technological properties, like foaming and creaming abilities [3]. Controlling milk lipolysis is therefore an economic issue for dairy producers. Spontaneous lipolysis of milk results from a complex interplay between farming practices, animal physiology and animal genetics [4,5], but underlying mechanisms

35 are still poorly understood. At the molecular level, the lipolytic system is constituted  
36 by the lipoprotein lipase, cofactors (activators and inhibitors) and substrate (milk  
37 triglycerides), and the resulting products are free fatty acids and partial glycerides. In  
38 the native bovine milk, the skim fraction is the richest source of LPL mainly  
39 associated with the casein micelle through electrostatic interactions [3] and upon  
40 cooling the proportion of LPL linked to the MFGM increases [6,7]. Inactive LPL can  
41 refold into active LPL dimers in the presence of calcium ions and this phenomenon is  
42 potentiated by the presence of activators, namely serum albumin, lipoproteins,  
43 heparin or glycerol [8], which are mainly located in skim milk. The presence of LPL  
44 inhibitors has also been documented in milk. A component of the milk proteose-  
45 peptone fraction PP3, also known as lactophorin, has been identified as a potential  
46 LPL inhibitor [9]. The skim milk proteose-peptone component 5 (PP5, residues 1–105  
47 and 1–107 of  $\beta$ -casein) has been identified in some studies as an activator of LPL  
48 [10] and in other studies, as an inhibitor of LPL [9]. However, most of these studies  
49 dealing with the identification of milk and skim milk lipase activity regulators were  
50 conducted in the 1980s [9,11–13] and need to be reassessed in view of the major  
51 advances in proteomics that have occurred over the past decade, especially with  
52 regard to the analysis of milk protein fractions [14,15].

53 The aim of the present study is to discover biomarkers of lipolysis in skim milk by  
54 using a model of feed restriction as a lever to produce milk samples with contrasted  
55 lipolysis rates [16]. To achieve this outcome, we combined statistical methods on our  
56 proteomics data with milk lipolysis values and LPL enzyme activities to identify  
57 robustly discriminant proteins of lipolysis in milk. Following this strategy, we further  
58 describe the protein signatures of spontaneous lipolysis or LPL activity in skim milk.  
59 We acknowledge some limitations in our approach. In order to perform satisfactory  
60 proteomic analysis of skim milk, milk fat was removed with skimming, but part of the  
61 LPL is located in the fat phase. However, our results help to better understand the  
62 biological mechanisms of milk fat degradation through the identification of putative  
63 regulators of lipase activity in milk, which is a prerequisite to design a test to detect  
64 lipolysis in milk samples.

65

## 66 **1. Material and methods**

### 67 **1.1 Animals and experimental design**

68 The experiment was conducted at the Installation Expérimentale Production Laitière,  
69 INRAE, Dairy nutrition and physiology (IE PL, 35650 Le Rheu, France;  
70 <https://doi.org/10.15454/yk9q-pf68>) with agreement for animal housing number C-35–  
71 275-23. This study was realized on samples from sixteen primiparous and  
72 multiparous Holstein cows at  $156 \pm 20$  days in milk fed with diet treatments based on  
73 corn silage and differing by the level of feeding. These cows are a subsample of the  
74 44 cows included in a reverse design on feeding level during 4 weeks split into 2 two-  
75 week periods in March 2019 [16]. Two feeding levels were considered: “non-  
76 restricted”, with cows fed a corn silage-based diet at 100% of ad libitum dry matter  
77 intake (DMI), and “restricted”, corresponding to a corn silage-based diet at 65% of ad  
78 libitum DMI. For omics studies, 8 cows in each two-week period were used. During  
79 period 1, each group of cows first received the non-restricted diet, followed by the  
80 restricted diet. During period 2, the order of feeding levels was reversed. Further  
81 details about the feed offered in the two diets can be found in [16]. The animals had  
82 access to fresh water *ad libitum*.

83

### 84 **1.2 Milk processing and lipolysis determination**

85 The milk yields of individual animals were recorded over 6 milkings at 8:00 and 16:30  
86 each week. Milk samples were collected individually on morning milking on the last  
87 day of each experimental period, with one part immediately treated with bronopol-B2  
88 preservative (LIAL, Aurillac, France) to measure fat, protein and lactose content  
89 (MyLab, Chateaugiron, France). The other part of milk (unpreserved) was used to  
90 determine the milk lipolysis level using the copper soap method (mEq/100g fat) [5,17]  
91 as described in detail in [16]. The morning lipolysis levels of milk collected on the last  
92 day of the period were used to define groups of low and high lipolysis cows based on  
93 a threshold of 0.5 mEq/100 g fat: Low Lipolysis (LL group with mean of  $0.32 \pm 0.12$   
94 mEq/100 g fat) vs High Lipolysis (HL group,  $0.84 \pm 0.33$  mEq/100 g fat). Unpreserved  
95 milk was also stored at  $-80^{\circ}\text{C}$  for protein extraction and identification analyses and  
96 LPL activity determination (nmol/mn/ml) measured in vitro using a radiolabelled  
97 substrate [18].

### 98 **1.3 Major protein identification using LC-ESI-MS**

99 Major milk proteins, namely the four caseins ( $\alpha$ s1-caseins,  $\alpha$ s2 caseins,  $\beta$ -caseins  
100 and  $\kappa$ -caseins),  $\alpha$ -lactalbumin, and  $\beta$ -lactoglobulin and all their isoforms were

101 identified and quantified using our improved method combining reverse-phase high  
102 performance liquid chromatography (Ultimate LC 3 000 system, Thermo Fisher  
103 Scientific, Waltham, MA) with an ESI-TOF mass spectrometer micrOTOF II focus  
104 (Bruker Daltonics, Wissembourg, France) [19]. Briefly, milk samples were placed on  
105 dry ice immediately after milking and stored at -80°C for further analyses. Milk  
106 samples were rapidly thawed at 37°C then skimmed by centrifugation at 2 000 g and  
107 4°C for 10 min. The cream was removed by means of a spatula and the skimmed  
108 milk was aliquoted into fractions of 20 and 100 µL, frozen at -20°C and kept under  
109 these conditions until analysis by Liquid Chromatography-Electro Spray Ionization-  
110 Mass Spectrometry (LC-ESI-MS). Identification of the main milk protein isoforms was  
111 performed using our in-house mass database of bovine milk proteins containing  
112 nearly 3 000 theoretical masses, corresponding to the multiple isoforms of milk  
113 proteins including genetic and splicing variants, post-translationally modified proteins  
114 (phosphorylated and glycosylated) and main known plasmin hydrolysis products.

115

## 116 **1.4 Minor protein identification using nano-LC-MS/MS**

### 117 ***1.4.1 Skim milk protein isolation, concentration and digestion***

118 All reagents were purchased from Sigma-Aldrich (Saint Louis (MO)) except when  
119 otherwise specified. The raw milk was slightly defrosted during one night at 4°C and  
120 milk components equilibrated by incubation during 1 h at 37°C. The equilibrated raw  
121 milk was centrifuged at 3 500 g for 15 min at 4°C to separate the cream from the  
122 skimmed milk (SM). Acetic acid was added to the SM reaching pH 4.6 to precipitate  
123 the caseins. The homogenate was centrifuged at 10 000 g for 10 min at 4°C to  
124 discard caseins and supernatant recovered until protein concentration determination.  
125 Enrichment of minor or low-abundance SM proteins was performed using the  
126 ProteoMiner Small-Capacity columns (#163-3006, Bio-Rad Laboratories, Hercules  
127 (CA)) according to the manufacturer's instructions. Column was washed twice, and  
128 10 mg of proteins from SM were deposited on column and incubated 2 h at room  
129 temperature (RT) under agitation. Then, spin columns were washed with buffer twice  
130 and with purified milli-Q water once (1 min at RT) followed by a 1 000 g centrifugation  
131 in order to eliminate unbound proteins. Proteins enriched from medium- and low-  
132 abundance were incubated for two runs of 15 min in 20 µL of elution buffer (RT) and  
133 centrifuged at 1 000 g. Supernatant was recovered until protein concentration

134 determination using Pierce™ BCA protein assay kit (Fisher Scientific, Hampton  
135 (NH)).

136 Twenty µg of proteins were mixed with reducing sodium dodecylsulfate buffer (4%)  
137 with dithiothreitol (20 mM) and incubated 10 min boiling in order to reduce disulphide  
138 bonds. Then proteins were alkylated in iodoacetamide (50 mM) during 45 min  
139 protected from light. After acidification with phosphoric acid (1.2%), S-Trap® buffer  
140 (triethylammonium bicarbonate 100 mM; in ethanol 90%) was added and proteins  
141 were deposit on S-Trap® column (Protifi, Fairport, NY). Columns containing proteins  
142 were centrifuged at 4 000 g during 10 min, washed with S-Trap® buffer and this step  
143 was repeated 3 times.

144 SM protein digestion was performed with sequencing grade trypsin (Promega,  
145 Madison (WI)) 1:50 [w/w] enzyme/protein ratio in triethylammonium bicarbonate (50  
146 mM) with overnight incubation at 37°C. Tryptic peptides were extracted by adding 60  
147 µL of 0.2% formic acid in acetonitrile (50%) followed by centrifugation at 4 000 g  
148 during 10 min repeated twice. Supernatants containing peptides were dried by  
149 SpeedVac vacuum concentrator (ThermoScientific, Illkirch (FR)). Peptides were  
150 recovered in 100 µL of 5% acetonitrile and 0.05% trifluoroacetic acid (TFA) solution  
151 with sonication during 5 min and transferred into glass vials (Interchim, Montluçon  
152 (FR)) prior to nano-LC-MS/MS analysis.

#### 153 **1.4.2 Peptide analysis on nano-LC-MS/MS**

154 Peptide mixtures were analysed by nano-LC-MS/MS using an Ultimate 3 000 system  
155 coupled to a QExactive HF-X mass spectrometer (MS) (Thermo Fisher Scientific). A  
156 volume of 6 µl of peptide extract was first concentrated and desalted at a flow rate of  
157 30 µl/min on a C18 pre-column 5 cm length x 100 µm (Acclaim PepMap 100 C18, 5  
158 µm, 100A nanoViper) equilibrated with Trifluoroacetic Acid 0.05% in water. Then this  
159 preconcentration column was switched online with a nanoflow analytical C18 column  
160 (Acclaim PepMap 100 - 75 µm inner diameter x 25 cm length; C18 - 3 µm -100Å - SN  
161 10719167) equilibrated at a flow rate of 300 nL/min with a 95% solvent A (99.9%  
162 H<sub>2</sub>O, 0.1% formic acid). The peptides were separated according to their  
163 hydrophobicity using a gradient of solvent B (99.9% acetonitrile, 0.1% formic acid)  
164 from 5 to 32% during 50 min. For MS analysis, eluted peptides were electrosprayed  
165 in positive-ion mode at 1.6 kV through a nanoelectrospray ion source heated to  
166 250°C. The MS operated in data dependent mode: the parent ion was selected in the

167 orbitrap cell (FTMS) at a resolution of 120 000 and each MS analysis was followed by  
168 18 MS/MS with analysis of the MS/MS fragments at a resolution of 15 000.

169 At the end of the LC-MS/MS analysis, the raw data processing of peptide MS/MS  
170 spectra was carried out with Progenesis Q1 software (version 4.2, Nonlinear  
171 Dynamics, Newcastle upon Tyne, UK). The software defined a reference run used to  
172 perform an automatic alignment of all other runs considering a maximum allowable  
173 ion charged set to 5. The detected ions were grouped in a file (mgf) directly exported  
174 to the Mascot v2.5 (<http://www.matrixscience.com>) interrogation engine and searched  
175 against a *Bos taurus* decoy database (i.e. ref\_bos\_taurus, 37 513 sequences) with  
176 the following parameters during the request: precursor mass tolerance of 10 ppm and  
177 fragment mass tolerance of 0.05 Da, a maximum of two missed cleavage sites of  
178 trypsin, carbamidomethylation (C), oxidation (M) and deamidation (NQ) set as  
179 variable modifications. Protein identification was validated when at least two peptides  
180 from one protein showed statistically significant identity above Mascot scores with a  
181 false discovery rate (FDR) of 1%. For label-free protein quantification analysis, the  
182 identified peptides from the database search were imported back to Progenesis Q1  
183 software. All unique validated peptides of an identified protein were included and the  
184 total cumulative abundance was calculated by summing the abundances of all  
185 peptides allocated to the respective protein. Consequently, proteins were quantified  
186 based on the intensities of the specific validated peptides.

187

## 188 **1.5 Statistical analysis**

189 Statistical analyses were performed using R (version 4.2.1). All data came from 2  
190 groups of 8 animals forming a part of the reverse design experiment (full details in  
191 Hurtaud et al., 2023). As cited earlier, the milk lipolysis level was used to constitute  
192 the Low Lipolysis (LL) group with a mean of  $0.32 \pm 0.12$  mEq/100 g fat and the High  
193 Lipolysis (HL) group with a mean of  $0.84 \pm 0.33$  mEq/100 g fat. Thus, the  
194 experimental design consists of the following fixed effects: period (P1 vs P2, differing  
195 by 15 d of lactation), sequence (order of feed restriction treatment), and lipolysis level  
196 (LL vs HL). We note that as both diets (restricted and unrestricted) were fed in  
197 succession to each cow, repeated measurements were available for each cow in this  
198 design.

199 Animal parameters (such as DMI, milk production and composition) and major  
200 proteins from milk containing 0.3% missing variables were imputed by the k-nearest  
201 neighbour method (k=5) using the impute package (version 1.70.0).

202 A linear mixed model with fixed effects (period, sequence and lipolysis) and a random  
203 animal effect was fit for animal parameters using the lme4 package (version 1.1.31),  
204 and statistical significance was evaluated using Type II sums of squares in the Anova  
205 function from the car package (version 3.1.1;  $p < 0.05$ ). The sequence effect was not  
206 significant and was thus removed from the model.

207 Raw minor protein abundances from SM containing 0.4% missing variables were  
208 imputed by the k-nearest neighbour method (k=5) using the impute package.

209 Abundances were then log-transformed. We applied two complementary statistical  
210 analyses to identify a proteomic signature that discriminates the LL and HL groups: i)  
211 a parametric univariate differential analysis (Diff-A) to identify significant proteins one  
212 by one based on their abundances; and to go further ii) a sparse multi-level  
213 multivariate analysis to identify a concise signature of proteins strongly linked to  
214 either lipolysis (sPLS-lipolysis) or LPL activity (sPLS-LPL-activity). The parametric  
215 univariate differential analysis (Diff-A) was performed by fitting to each protein an  
216 empirical Bayes linear model including lipolysis, sequence and period fixed effects  
217 and a random animal effect using the limma package (version 3.52.2). As no  
218 significant effect was observed across proteins for period and sequence, these were  
219 removed from the model. P-values were adjusted to control the FDR (adj.P.Val) using  
220 the Benjamini-Hochberg approach. Statistical significance was considered at  
221  $\text{adj.P.Val} < 0.1$  and an absolute fold change threshold of 1.5.

222 Sparse multi-level partial least square analyses (sPLS) were performed in regression  
223 mode with paired observations on cows using the mixOmics package (version 6.20.0,  
224 Rohart et al., 2017). Predictor variables (X) corresponded to the log protein  
225 abundances, and the response variable (Y) to either the milk lipolysis (sPLS-lipolysis)  
226 or the milk LPL activity (sPLS-LPL-activity). For each sPLS model, we retained 2  
227 components, both including a total of 30 proteins with non-zero loadings. A posteriori,  
228 the first sPLS component for each model was found to be highly discriminative  
229 between the LL and HL groups. The proteins with non-zero loadings in the first  
230 component were compiled into lists of milk lipolysis related proteins and LPL activity  
231 related proteins with their respective contributions. Contributions correspond to the

232 weight assigned to each protein to define each component; larger absolute values  
233 mean that a given protein has a greater importance for a given component.  
234 Lists of proteins were mined for biological meaning by a gene ontology (GO)  
235 enrichment analysis, performed using the ProteINSIDE webservice online tool  
236 version 2.0 (available at [https://umrh-](https://umrh-bioinfo.clermont.inrae.fr/ProteINSIDE_2/index.php?page=upload.php)  
237 [bioinfo.clermont.inrae.fr/ProteINSIDE\\_2/index.php?page=upload.php](https://umrh-bioinfo.clermont.inrae.fr/ProteINSIDE_2/index.php?page=upload.php), [20]) based on  
238 *Bos taurus* and a search of biological reactions on Reactome based on *Homo*  
239 *sapiens*.

240

## 241 **2. Results**

### 242 **2.1 Highly contrasted milk samples with regard to spontaneous lipolysis levels**

243 We used feed restriction of the cows as a lever to generate two groups of 8 cows with  
244 contrasted milk in terms of lipolysis levels for use in omics studies. The performance  
245 data of these 8 dairy cows were comparable with those on the full set of 44 cows in  
246 the original study [16].

247 The parameters relative to the ingestion of the 8 dairy cows from the LL group (fed an  
248 unrestricted diet) and the HL group (fed a restricted diet) are reported in  
249 Supplementary Table S1. As expected, the milk yield and composition are  
250 dramatically divergent between LL and HL groups (Table 1). The milk production  
251 decreased by 9.7% in the HL compared with LL group ( $P < 0.05$ ). The total milk  
252 protein content was reduced by 16.7% in the HL group compared to the LL group  
253 (583.4 g and 486.1 g secreted in morning milk, respectively). Both the casein and  
254 soluble protein content were divergent between LL and HL groups (-6.5% and -9.6%,  
255 respectively). At the same time, milk lipolysis increased by a factor of 2.6 in the HL  
256 group compared with the LL group ( $P < 0.05$ ). Interestingly, the milk LPL activity  
257 increased by a factor of only 1.4 in the HL group ( $P < 0.05$ ). Although the correlation  
258 between LPL activity and lipolysis in milk is high ( $r = 0.69$ ;  $P = 0.003$ ; Figure 1), the  
259 increase in the milk LPL activity (+44.5%) cannot solely explain the dramatic increase  
260 in lipolysis levels we observed in the HL group (+162.5%), thus suggesting that  
261 regulators may amplify the lipolytic response in milk.

262

### 263 **2.2 Spontaneous lipolysis modulates the abundances of skimmed milk proteins**

264 635 proteins were identified in our study and raw abundances for each protein are  
265 reported in Supplementary Table S3. Among these 635 proteins, the spontaneous

266 lipolysis significantly impacts the milk abundances of eight proteins. The volcano plot  
267 (Figure 2), resulting from the parametric univariate analysis, displays the seven  
268 proteins with higher abundance (A0A3Q1M3L6, CD5L, A0A3Q1LRW4, KRT10, GP2,  
269 APOA4, LBP) and the one with lower abundance (CUL9) in the HL compared with LL  
270 group (Table 2). Interestingly, the LPL protein (P11151) was 1.9 times more  
271 abundant in HL compared with LL group, but this increase was not statistically  
272 significant.

273

### 274 **2.3 Milk protein signature of lipolysis in milk**

275 The sPLS multivariate analysis of milk lipolysis (Y) and log protein abundances (X)  
276 reveals a component that is highly discriminative between the HL and LL groups  
277 (Supplementary Figure S1). The corresponding milk proteins implicated in lipolysis  
278 are reported in Table 3. Among the 15 proteins associated with the HL group, the ten  
279 with the largest weights corresponded to two caseins (CSN1S2, CSN1S1), 3  
280 apolipoproteins (APOE, APOA4, APOA1), CD5L, LBP, A0A3Q1LRW4, CNTFR and  
281 GP2. Among the 15 proteins associated with the LL group, the ten with the largest  
282 weights are ALOX15, SDHA, FASN, GNG12, SURF4, STK38, HID1, ABCG2, MYO6  
283 and UQCRC2 (Table 3).

284 The 15 proteins associated with HL are annotated by terms within the biological  
285 process (BP) ontology related to the “positive regulation of cholesterol esterification”,  
286 the “steroid esterification” and the “very-low-density lipoprotein particle remodelling”  
287 for APOA1, APOA4 and APOE (Supplementary Table S3). Similarly, the 15 proteins  
288 associated with the LL group were annotated by terms within the BP ontology  
289 highlighting the “positive regulation of protein lipidation” and “lipoprotein metabolic  
290 process” and the “establishment of protein localization at the membrane of reticulum  
291 endoplasmic” for both RAB3GAP1 and RAB3GAP2 (Supplementary Table S3).

292

### 293 **2.4 Milk protein signature of LPL activity**

294 The first component of the sPLS multivariate analysis of milk LPL activity (Y) and log  
295 protein abundances (X) similarly discriminated between the HL and LL groups  
296 (Supplementary Figure S2). SM proteins related to the level of milk LPL activity are  
297 listed in Table 4. Seventeen proteins were strongly associated with the HL group (i.e.,  
298 positive loadings for component 1 of the sPLS) with GP2, BSPRY, KRT10, ANXA7,  
299 MARCKS, CD5L, SLC5A9, SLC6A8, A0A3Q1M3L6 and IDH1 in the top 10. Among

300 the 13 proteins associated with the LL group, HID1, SQLE, CUL9, VAT1, PHB2,  
301 ACSL3, NDRG4, ATP13A3, FASN and ANKRD13A were in the top 10 (Table 4).  
302 The 17 proteins associated with HL were significantly annotated by terms within the  
303 BP category that emphasized “localization” for CD5L, GP2, NAPA, SH3GLB1,  
304 SLC5A9, SLC6A8, the “negative regulation of cholesterol metabolic process” for  
305 ERLIN2 the “isocitrate metabolic process”, the “glyoxylate cycle” and “tricarboxylic  
306 acid metabolic process” for IDH1. Moreover, 13 proteins among the 17 were  
307 annotated by the “membrane” term within the CC category (Supplementary Table  
308 S3).

309 The 13 proteins associated with the LL group were annotated by terms within the BP  
310 category that highlight the “regulation of phospholipid metabolic process”, particularly  
311 phosphatidylcholine, for ACSL3 and PHB2 and “negative regulation of protein  
312 localization to endosome” for ANKRD13A (Supplementary Table S3).

313

## 314 **2.5 Putative milk biomarkers of milk lipolysis**

315 Crossing the protein lists resulting from the univariate and multivariate statistical  
316 analyses highlights the CD5 molecule like (CD5L) and the Glycoprotein 2 (GP2).  
317 These are therefore putative biomarkers of high lipolysis in milk (Figure 3). CD5L and  
318 GP2 skim milk abundances correlated positively with milk lipolysis ( $r = 0.69$ ;  $P =$   
319  $0.003$  and  $r = 0.5$ ;  $P = 0.04$ ) and milk LPL activity ( $r = 0.68$ ;  $P = 0.003$  and  $r = 0.6$ ;  $P =$   
320  $0.01$ ) (Supplementary Table S4).

321 Focusing on protein lists associated with the LL group, the Surfeit locus protein 4  
322 (SURF4) and Chromosome 17 open reading frame 28 ortholog (HID1) are common  
323 proteins linked to milk lipolysis (sPLS-lipolysis) and milk LPL activity (sPLS-LPL  
324 activity) (Figure 4). SURF4, HID1 and CUL9 are negatively correlated with both  
325 lipolysis ( $r = -0.63$ ,  $P = 0.008$ ;  $r = -0.4$ ,  $P = 0.1$  and  $r = -0.48$ ,  $P = 0.06$ ) and LPL  
326 activity in milk ( $r = -0.74$ ,  $P = 0.0009$ ;  $r = -0.6$ ,  $P = 0.01$  and  $r = -0.59$ ,  $P = 0.01$ )  
327 (Supplementary Table S4). These proteins are therefore good candidates that may  
328 be indicative of low lipolysis in the milk of dairy cows.

329

## 330 **3. Discussion**

331 As expected, the feed restriction of dairy cows dramatically induced lipolysis in milk  
332 (+162.5%; HL group) compared with cows fed with normal diet (LL group) [16,21].

333 Noticeably, while lipolysis increased 2.6 times in the HL compared to LL group, the  
334 activity of the LPL enzyme only increased 1.4 times, thus suggesting that molecules  
335 may act as regulators of the enzyme in skim milk (Table 1). However, the LPL activity  
336 measured in vitro in optimal conditions represents the potential LPL activity and not  
337 the in vivo activity. Furthermore, previous studies in cows showed that milk lipolysis  
338 was poorly correlated to LPL activity [22], which is probably due at least in part to the  
339 major cellular location of the LPL in the casein micelle fraction of milk in cows. These  
340 considerations support giving more weight to the molecules identified as a signature  
341 of lipolysis within the skim milk.

342 The feed restriction necessarily impacts the milk proteome [21,23]. Our aim was to  
343 identify robust biomarkers of milk lipolysis and a list of putative regulators of lipolysis  
344 in skim milk to better understand the lipolytic processes. To achieve this goal, we first  
345 performed a classical univariate statistical analysis on our proteomics data to identify  
346 differentially abundant proteins between lipolysis treatments while accounting for  
347 other experimental factors. We then performed two multivariate statistical analyses  
348 on the proteomics abundance data to identify proteins forming signatures of lipolysis  
349 and milk LPL enzyme activity. sPLS is a powerful tool that seeks to maximize the  
350 covariance between the proteomic abundances and response variable of interest  
351 (lipolysis, LPL activity) using a set of latent components, where a lasso penalization  
352 is used to focus interest on a concise set of predictive biomarkers. Finally, we  
353 compared differential proteins and those forming signatures of lipolysis and LPL  
354 activity to identify proteins involved in the regulation of the lipolytic process in milk.  
355 Following this 3-step strategy, we identified CD5L and GP2 as robust biomarkers and  
356 putative regulators of lipolysis in milk (Figure 3). These proteins were consistently  
357 identified in the differential analysis, as well as sPLS-lipolysis and sPLS-LPL activity  
358 analyses, highlighting them as key molecules involved in the lipolytic pathway in  
359 bovine milk. CD5L, also called Apoptosis inhibitor of macrophage (AIM) or apoptosis  
360 inhibitor 6 (Api6), is a soluble member of the scavenger receptor cysteine-rich  
361 superfamily, which is secreted by mature tissue macrophages in mouse in the  
362 context of inflammation and obesity. Kurokawa et al. [24,25] reported that the  
363 AIM/Api6/CD5L protein is incorporated into adipocytes via CD36-mediated  
364 endocytosis, and induces lipolysis by suppressing the activity of fatty acid synthase  
365 (FASN). In our study, CD5L negatively correlates ( $r = -0.75$ ;  $P = 0.0007$ ) with FASN,  
366 the latter of which was strongly associated with the LL group for both sPLS-lipolysis

367 and sPLS-LPL-activity (Tables 3 and 4). As proposed earlier by Iwamura et al. [26] in  
368 adipocytes of mice, we further suggest that in bovine mammary epithelial cells, the  
369 highly abundant CD5L binds to cytosolic FASN, inhibiting its enzymatic activity and  
370 thus lowering the milk short and medium chain FA from *de novo* mammary synthesis.  
371 In other words, CD5L may act by repressing *de novo* synthesis by FASN, favouring a  
372 higher fatty acid uptake by both the mammary LPL and NEFA transporters for milk  
373 lipid synthesis [27]. The latter being favoured by the high plasma NEFA concentration  
374 observed due to adipose mobilization which was associated with lipolysis in milk [21].  
375 GP2 was identified in the heat- and acid-stable fraction of ovine milk [28] and was  
376 recently listed in all the fractions of bovine milk throughout lactation [15]. The heat-  
377 and acid-stable fraction of bovine milk belongs to the proteose-peptone fraction,  
378 which contain potential activators or inhibitors of LPL enzyme [29]. Most of the  
379 component of proteose-peptone fraction are fragments of caseins produced by the  
380 action of endogenous plasmin and the main constituents are recognized as  
381 components 3, 5, 8 [30,31]. Peptone protease (PP) 5 have been identified both as an  
382 activator [10] or an inhibitor of LPL enzyme [9,21] and remain controversial. Among  
383 this PP fraction, the potential GP2 role in the lipolysis process has not been yet  
384 addressed. However, given its structure of glycosylphosphatidylinositol-anchored  
385 glycoprotein, GP2 may be involved in the link of LPL with the MFGM. This hypothesis  
386 remains to be investigated and is based on the observations that  
387 glycosylphosphatidylinositol-anchored glycoprotein such as GPIHBP1 is involved in  
388 the binding of LPL and chylomicrons in mice [32]. Moreover, GP2 is highly positively  
389 correlated with the glypican-1 protein (GPC1) in an sPLS discriminant analysis  
390 between the LL and HL groups (Supplementary Figure S3 reports the circle plot of  
391 component 1 and 2). GPC1 is a cell surface proteoglycan carrying an heparan sulfate  
392 moiety, which facilitates or inhibits the interaction of proteins with lipid-rafts. Heparin-  
393 like glycosaminoglycans have been identified as potential activators of LPL [29,33].  
394 Among research focusing on the interactions between LPL and MFGM allowing its  
395 access to its substrates, LPL is known to bind to heparan sulfate-type  
396 glycosaminoglycans present on the surface of MFG [6]. All these assumptions justify  
397 analyzing the involvement of GP2 in the localization of LPL close to its substrate,  
398 supported by GP2 positive correlation with milk LPL activity ( $r = 0.60$ ;  $P = 0.01$ )  
399 (Supplementary Table S4).

400 Three proteins were both differentially abundant and related to lipolysis. APOA4,  
401 A0A3Q1LRW4 and LBP were identified in the milk from the HL group as strongly  
402 associated proteins (Table 3, Figure 3). APOA4 is a known actor in lipolysis, since it  
403 is required for efficient activation of LPL by APOC-II [3,34]. A0A3Q1LRW4 protein is  
404 an immunoglobulin fragment, but not well described. Lastly, the LBP protein  
405 addressing the HL group indicates modification of the immune response and lipid  
406 transport in the cows in line with adaptive response to feed restriction [35].

407

408 Dairy cows fed diets covering requirements present low lipolysis levels in milk despite  
409 the presence of LPL, thus suggesting that the LPL enzyme is tightly regulated. It is  
410 therefore of interest to identify not only proteins associated with high levels of  
411 lipolysis in milk, but also proteins associated with low levels of lipolysis, the latter of  
412 which may be putative inhibitors of lipolysis in milk. The cullin 9 protein (CUL9) was  
413 identified in the milk of the LL group both in our differential analysis and sPLS-LPL  
414 activity analysis (Figure 4). CUL9 belongs to the cullin family of proteins, molecular  
415 scaffolds that have crucial roles in the homeostasis of cellular proteins through the  
416 ubiquitin-proteasome system [36]. Cullins work in concert with RING proteins as  
417 docking proteins to add ubiquitin to specific proteins, targeting them for destruction.  
418 Such a regulation of lipase activity through ubiquitination has been recently  
419 demonstrated for the adipose triglyceride lipase in hepatic cells [37].

420 Two additional proteins were strongly associated with reduced lipolysis levels in milk:  
421 SURF4 (Surfeit locus protein 4) and HID1 (Chromosome 17 open reading frame 28  
422 ortholog protein) (Figure 4). SURF4 is an endoplasmic reticulum (ER) cargo receptor  
423 that mediates the selective export of lipoproteins to facilitate their secretion, thus  
424 playing a crucial role for the maintenance of lipid homeostasis [38].

425 As well as SURF4, HID1 protein is associated with low levels of LPL activity and  
426 lipolysis (Figure 4). HID-1 controls formation of large dense core vesicles by  
427 influencing cargo sorting of neuropeptides and peptide hormones through  
428 acidification of the trans Golgi network [39]. HID1 is thus involved in the release of  
429 insulin by pancreatic cells through the processing of proinsulin to functionally active  
430 hormone [40]. Moreover, in our study, the expression of HID1 is positively correlated  
431 with the expression of FASN in the LL group ( $r = 0.72$ ;  $P = 0.001$ ; Supplementary  
432 Table S4), thus favouring the mammary *de novo* FA pathway in the case of a  
433 sufficient feeding level.

434

#### 435 **4. Conclusions**

436 In this study, we used feed restriction as a lever to produce highly contrasted  
437 samples with regard to lipolysis levels in bovine milk. Following proteomic studies, we  
438 combined uni- and multivariate statistical analyses with milk lipolysis values and/or  
439 LPL enzyme activities measured in milk to identify key regulators of lipolysis in bovine  
440 milk. We identified the CD5L and GP2 proteins as robust biomarkers of high lipolysis  
441 in cow milk. HID1, SURF4 and CUL9 are putative inhibitors of the lipolytic process in  
442 the milk. The data provided here constitute a robust basis for further tests on a larger  
443 population to design a quick on-farm diagnosis tool such as strip tests to monitor  
444 lipolysis levels in cow milk.

Table 1: Morning milk parameters in LL and HL groups.

	LL	HL	SEM	p-val lipolysis	Significa nce of lipolysis	Signific ance of period
<b>Milk yield and gross composition</b>						
Milk yield (kg)	18.5	16.7	0.62	0.031	*	NS
Milk fat content (g secreted)	710.7	611.5	31.8	0.056	NS	NS
Milk protein content (g secreted)	583.4	486.1	24.2	0.0004	***	NS
Milk lactose content (g secreted)	908.1	825.3	31	0.044	*	NS
Somatic Cell Count (x10 <sup>3</sup> /mL)	34.3	33.5	8	0.967	NS	NS
<b>Milk fat characteristics</b>						
Lipolysis (mEq/100g fat)	0.32	0.84	0.09	0.002	**	NS
Lipoprotein Lipase activity (nmol/min/ml)	514.8	744.2	35.7	0.002	**	NS
Milk fat globule diameter (d <sub>4,3</sub> <sup>*</sup> ) (µm)	3.74	3.65	0.09	0.587	NS	NS
Milk fat globule diameter (d <sub>3,2</sub> <sup>*</sup> ) (µm)	3.31	3.13	0.07	0.185	NS	NS
Milk fat globule area (S <sup>*</sup> ) (m <sup>2</sup> )	1.97	2.11	0.05	0.147	NS	NS
<b>Milk proteins characteristics</b>						
Protein content (g/kg)	31.2	29	0.5	0.011	*	NS
Nitrogen content (g/kg)	32.5	30.3	0.5	0.01	**	NS
Non-casein nitrogen (g/kg)	6.4	6	0.1	0.046	*	*
Non-protein nitrogen (g/kg)	1.25	1.32	0.04	0.215	NS	NS
Casein content (g/kg)	26	24.3	0.5	0.008	**	NS
Soluble protein content (g/kg)	5.2	4.7	0.2	0.011	*	NS
Casein/protein ratio (%)	82.8	83.6	0.5	0.054	NS	NS

\* $d_{4,3} = \frac{\sum(N_i \times d_i^4)}{\sum(N_i \times d_i^3)}$

\* $d_{3,2} = \frac{\sum(N_i \times d_i^3)}{\sum(N_i \times d_i^2)}$

\* $S = \frac{6}{\rho \times d_{3,2}}$  (with  $N_i$  the number of MFG in diameter class  $d_i$  and  $\rho$  the density of the particle considered (0.92 for fat))

P-values were significant at <0.001 (\*\*\*) ; <0.01 (\*\*) and <0.05 (\*)

NS = not significant

Table 2: Differentially regulated proteins in HL group compared with LL group from the parametric univariate differential analysis (Diff-A).

Accession	Gene name	Protein name	Raw abundance ratio (HL/LL)	FC	RSD	Adjusted-Pvalue
A0A3Q1M3L6	Uncharacterized protein	Immunoglobulin heavy constant mu	2.0	1.6	0.262	0.078
A6QNW7	CD5L	CD5 molecule like	3.1	2.2	0.624	0.078
A0A3Q1LRW4	Uncharacterized protein	Immunoglobulin heavy constant mu	2.7	1.9	0.470	0.078
P06394	KRT10	Keratin, type I cytoskeletal 10	2.7	2.1	0.590	0.078
A0A3Q1M193	GP2	Glycoprotein 2	2.1	1.7	0.315	0.078
Q32PJ2	APOA4	Apolipoprotein A-IV	5.6	2.9	0.739	0.078
Q2TBI0	LBP	Lipopolysaccharide-binding protein	2.6	1.9	0.521	0.080
E1BM39	CUL9	Cullin 9	0.3	-2.4	0.760	0.099

Table 3: List of 30 proteins from component 1 of sparse multi-level multivariate analysis (sPLS – milk lipolysis) contributing to LL or HL group

Accession	Gene Name	Protein Name	Importance of contribution to comp1	
			HL	LL
P02663	CSN1S2	Alpha-S2-casein	0.338	.
Q03247	APOE	Apolipoprotein E	0.314	.
A6QNW7	CD5L	CD5 molecule like	0.313	.
Q2TBI0	LBP	Lipopolysaccharide-binding protein	0.242	.
P02662	CSN1S1	Alpha-S1-casein	0.231	.
A0A3Q1LRW4	Uncharacterized protein	Immunoglobulin heavy constant mu	0.192	.

P20072	ANXA7	Annexin A7	0.208	.
P12624	MARCKS	Myristoylated alanine-rich C-kinase substrate	0.191	.
A6QNW7	CD5L	CD5 molecule like	0.164	.
E1B749	SLC5A9	Solute carrier family 5 member 9	0.147	.
O18875	SLC6A8	Sodium- and chloride-dependent creatine transporter 1	0.126	.
A0A3Q1M3L6	Uncharacterized protein	Immunoglobulin heavy constant mu	0.106	.
Q9XSG3	IDH1	Isocitrate dehydrogenase	0.104	.
Q29S21	KRT7	Keratin, type II cytoskeletal 7	0.079	.
E1BEH7	TC2N	Tandem C2 domains, nuclear	0.079	.
A0A3Q1LQY1	CNTFR	Ciliary neurotrophic factor receptor	0.063	.
P09487	ALPL	Alkaline phosphatase, tissue-nonspecific isozyme	0.056	.
Q32LM0	SH3GLB1	Endophilin-B1	0.046	.
Q1RMU4	ERLIN2	Erlin-2	0.036	.
P81125	NAPA	Alpha-soluble NSF attachment protein	0.015	.
Q08E22	HID1	Chromosome 17 open reading frame 28 ortholog	.	-0.344
A5D9A8	SQLE	Squalene monooxygenase	.	-0.327
E1BM39	CUL9	Cullin 9	.	-0.275
F1MUP9	VAT1	Vesicle amine transport 1	.	-0.271
Q2HJ97	PHB2	Prohibitin-2	.	-0.215
F1MEX9	ACSL3	Acyl-CoA synthetase long chain family member 3	.	-0.136
A0A3Q1LVG9	NDRG4	NDRG family member 4	.	-0.100
A0A3Q1LMJ5	ATP13A3	ATPase 13A3	.	-0.083
Q71SP7	FASN	Fatty acid synthase	.	-0.081
F1N545	ANKRD13A	Ankyrin repeat domain 13A	.	-0.032
P63009	AP2B1	AP-2 complex subunit beta	.	-0.020
Q1RMP9	CMTM8	CKLF-like MARVEL transmembrane domain-containing protein 8	.	-0.018
A7YY49	SURF4	Surfeit locus protein 4	.	-0.010

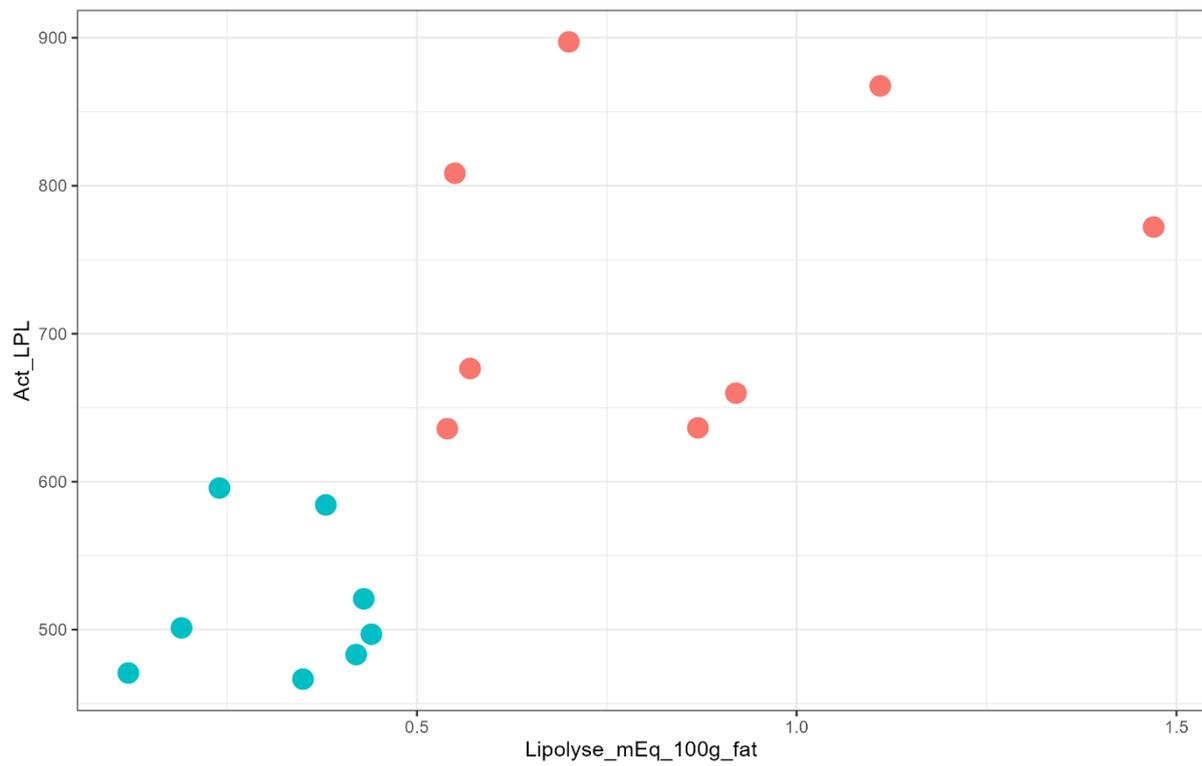

Figure 1: Plot regression between lipolysis (mEq/100g of fat) and LPL activity in milk (nmol/mn/ml). Blue dots are from LL group and red dots are from HL group.

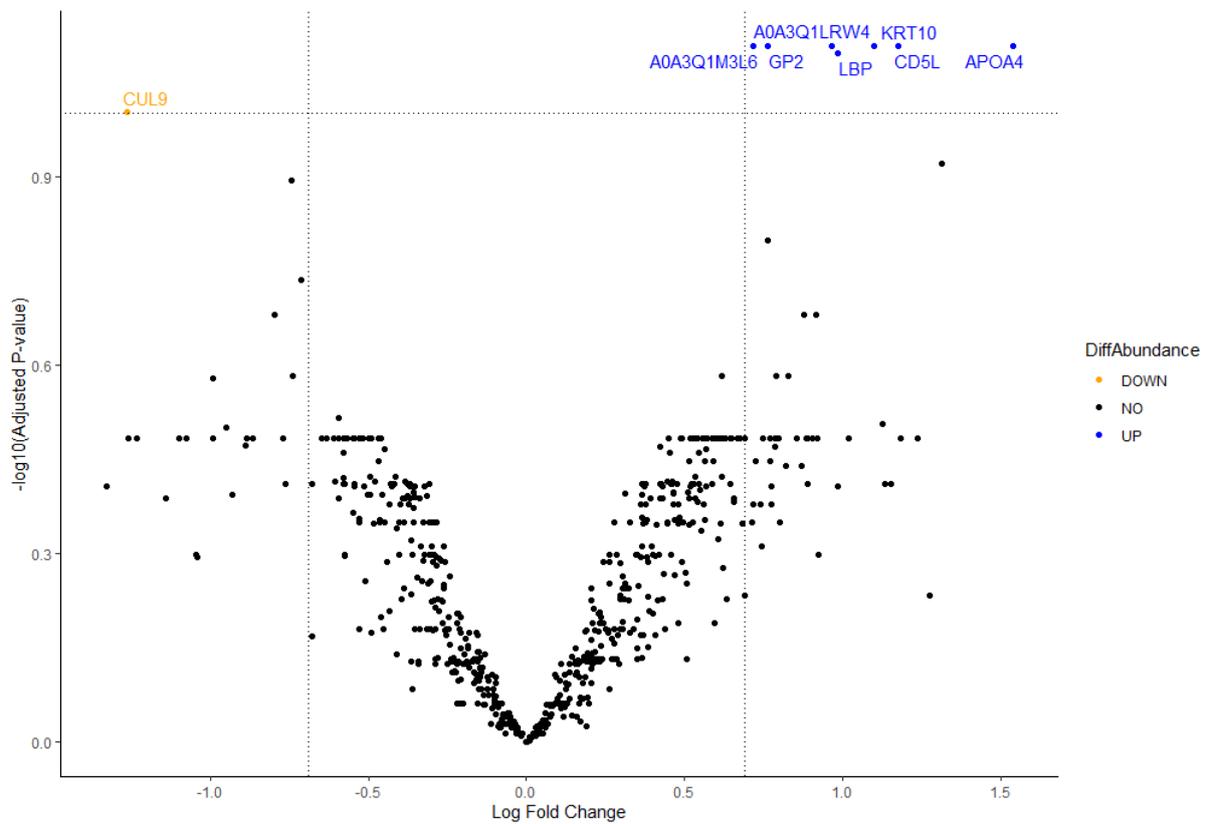

Figure 2: Volcano plot displays log fold changes on the x-axis versus a measure of statistical significance (Adjusted P-value) on the y-axis from the parametric univariate differential analysis (Diff-A). Gene Name of proteins with a higher abundance in HL than LL group are in blue. Gene Name of proteins with a lower abundance in HL than in LL group are in orange.

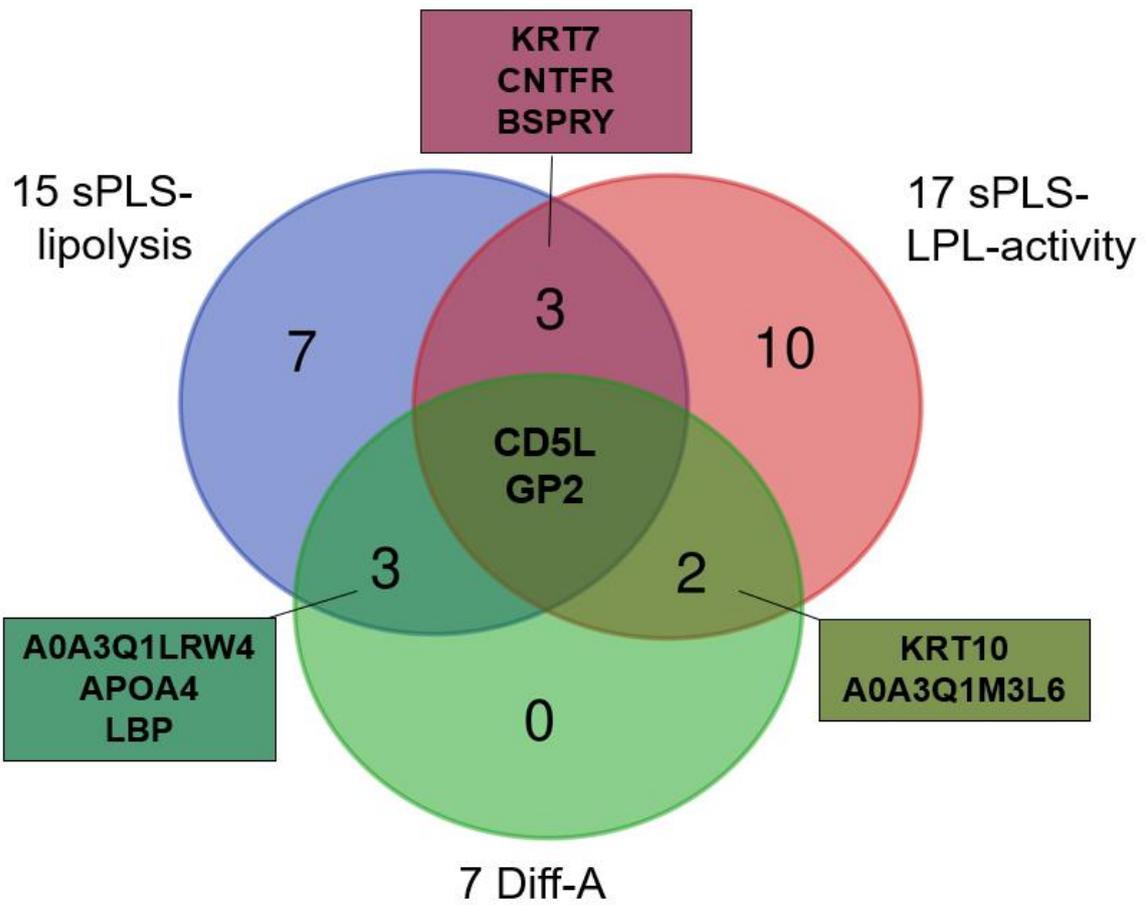

Figure 3: Venn diagram comparing proteins lists addressing HL group from sPLS-lipolysis (n=15), sPLS-LPL-activity (n=17) and differential analysis (n=7).

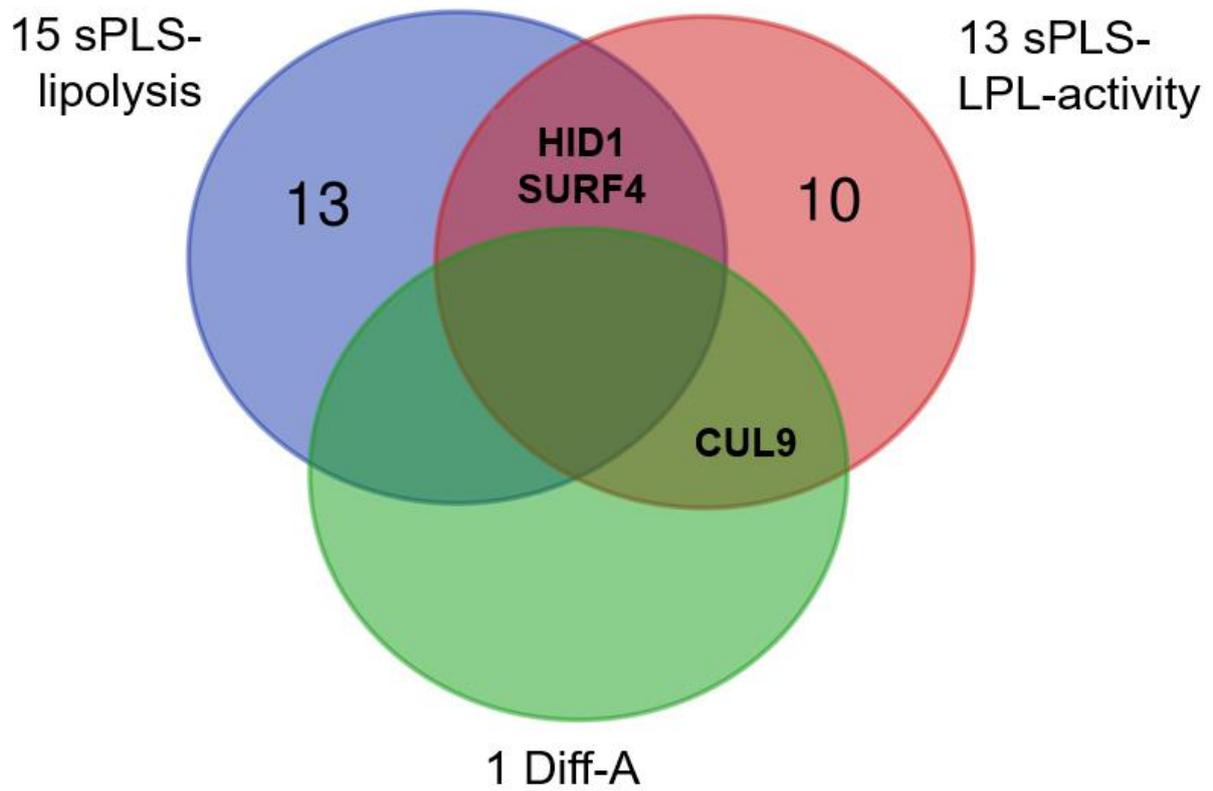

Figure 4: Venn diagram comparing proteins lists addressing LL group from sPLS-lipolysis (n=15), sPLS-LPL-activity (n=13) and differential analysis (n=1).

Supplementary Table S1: Dry matter, protein and energy intakes, energy balance and efficiency of protein digestible in intestine for LL and HL groups of cows

	LL	HL	SEM	p-val lipolysis	Signifi cance of lipolysi s	Signific ance of period
DMI (kg/d)	21,1	15,8	0,8	0,000	***	NS
PDI* (g/d)	1761,6	1306,1	74,9	0,000	***	NS
NEL requirements (MJ/d)	19,69	17,56	0,65	0,016	*	NS
PDI efficiency**	0,83	0,84	0,01	0,023	*	**
NEL balance (MJ/kg DM)	-5,7	-21,9	2,8	0,003	**	NS

\*PDI = protein digestible in the intestine (INRA, 2018)

\*\*PDI efficiency =  $(67,5 - 0,52 \times (\text{PDI} - 100) + 0,014 \times (\text{MilkProteins} - 1000)) / 100$  (INRA, 2018)

GO:0006979	response to oxidative stress	Any process that results in a change in state or activity of a cell or organelle	15.38 2/13	0.73 2/275	0.038128387
GO:0045862	positive regulation of proteolysis	Any process that activates or increases the frequency, rate or extent of proteolysis	15.38 2/13	0.73 2/275	0.038128387
GO:0007265	Ras protein signal transduction	A series of molecular signals within the cell that are mediated by Ras	15.38 2/13	0.72 2/276	0.038286961
GO:1902230	negative regulation of intrinsic apoptotic signaling pathway	Any process that stops, prevents or reduces the frequency, rate or extent of intrinsic apoptotic signaling pathway	7.69 1/13	4.76 1/21	0.038783126
GO:0055094	response to lipoprotein particle	Any process that results in a change in state or activity of a cell or organelle	7.69 1/13	4.76 1/21	0.038783126
GO:1900271	regulation of long-term synaptic potentiation	Any process that modulates the frequency, rate or extent of long-term synaptic potentiation	7.69 1/13	4.55 1/22	0.03985352
GO:0048519	negative regulation of biological process	Any process that stops, prevents, or reduces the frequency, rate or extent of a biological process	15.38 7/13	0.15 7/4543	0.03985352
GO:0050999	regulation of nitric-oxide synthase activity	Any process that modulates the activity of the enzyme nitric-oxide synthase	7.69 1/13	4.55 1/22	0.03985352
GO:0071402	cellular response to lipoprotein particle stimulus	Any process that results in a change in state or activity of a cell or organelle	7.69 1/13	4.55 1/22	0.03985352
GO:0051788	response to misfolded protein	Any process that results in a change in state or activity of a cell or organelle	7.69 1/13	4.55 1/22	0.03985352
GO:0032801	receptor catabolic process	The chemical reactions and pathways resulting in the breakdown of a receptor	7.69 1/13	4.55 1/22	0.03985352
GO:0002021	response to dietary excess	The physiological process in which dietary excess is sensed by the organism	7.69 1/13	4.55 1/22	0.03985352
GO:0050900	leukocyte migration	The movement of a leukocyte within or between different tissues	15.38 2/13	0.69 2/289	0.040667112
GO:0019934	cGMP-mediated signaling	Any intracellular signal transduction in which the signal is passed on by cGMP	7.69 1/13	4.35 1/23	0.041319408
GO:0007616	long-term memory	The memory process that deals with the storage, retrieval and modification of information	7.69 1/13	4.35 1/23	0.041319408
GO:0002701	negative regulation of production of molecular mediator	Any process that stops, prevents, or reduces the frequency, rate, or extent of production of a molecular mediator	7.69 1/13	4.17 1/24	0.042447919
GO:0034123	positive regulation of toll-like receptor signaling pathway	Any process that activates or increases the frequency, rate, or extent of toll-like receptor signaling pathway	7.69 1/13	4.17 1/24	0.042447919
GO:1902624	positive regulation of neutrophil migration	Any process that activates or increases the frequency, rate or extent of neutrophil migration	7.69 1/13	4.17 1/24	0.042447919
GO:0043085	positive regulation of catalytic activity	Any process that activates or increases the activity of an enzyme	23.08 3/13	0.36 3/845	0.042447919
GO:0019835	cytolysis	The rupture of cell membranes and the loss of cytoplasm	7.69 1/13	4.17 1/24	0.042447919
GO:0045730	respiratory burst	A phase of elevated metabolic activity, during which oxygen consumption is increased	7.69 1/13	4.17 1/24	0.042447919
GO:0044255	cellular lipid metabolic process	The chemical reactions and pathways involving lipids, as carried out in a cell	23.08 3/13	0.35 3/852	0.043284516
GO:0002764	immune response-regulating signaling pathway	The cascade of processes by which a signal interacts with a receptor	15.38 2/13	0.66 2/303	0.043321258
GO:0090022	regulation of neutrophil chemotaxis	Any process that modulates the frequency, rate, or extent of neutrophil chemotaxis	7.69 1/13	4.00 1/25	0.043381743
GO:0032770	positive regulation of monooxygenase activity	Any process that activates or increases the activity of a monooxygenase	7.69 1/13	4.00 1/25	0.043381743
GO:0001662	behavioral fear response	An acute behavioral change resulting from a perceived external threat	7.69 1/13	4.00 1/25	0.043381743
GO:0034381	plasma lipoprotein particle clearance	The process in which a lipoprotein particle is removed from the blood	7.69 1/13	4.00 1/25	0.043381743
GO:0050892	intestinal absorption	Any process in which nutrients are taken up from the contents of the intestine	7.69 1/13	4.00 1/25	0.043381743
GO:0042176	regulation of protein catabolic process	Any process that modulates the frequency, rate or extent of protein catabolic process	15.38 2/13	0.65 2/310	0.043860115
GO:0042311	vasodilation	An increase in the internal diameter of blood vessels, especially an artery	7.69 1/13	3.85 1/26	0.043860115
GO:0050673	epithelial cell proliferation	The multiplication or reproduction of epithelial cells, resulting in the formation of a new tissue	15.38 2/13	0.65 2/308	0.043860115
GO:0044788	modulation by host of viral process	A process in which a host organism modulates the frequency, rate or extent of a viral process	7.69 1/13	3.85 1/26	0.043860115
GO:0043537	negative regulation of blood vessel endothelial cell migration	Any process that stops, prevents, or reduces the frequency, rate or extent of blood vessel endothelial cell migration	7.69 1/13	3.85 1/26	0.043860115
GO:0048584	positive regulation of response to stimulus	Any process that activates, maintains or increases the rate of response to a stimulus	30.77 4/13	0.25 4/1617	0.043860115
GO:0044058	regulation of digestive system process	Any process that modulates the frequency, rate or extent of a digestive system process	7.69 1/13	3.85 1/26	0.043860115
GO:1902003	regulation of amyloid-beta formation	Any process that modulates the frequency, rate or extent of amyloid-beta formation	7.69 1/13	3.85 1/26	0.043860115
GO:0002209	behavioral defense response	A behavioral response seeking to protect an organism from an external threat	7.69 1/13	3.85 1/26	0.043860115
GO:0006953	acute-phase response	An acute inflammatory response that involves non-antibody proteins	7.69 1/13	3.85 1/26	0.043860115
GO:0097242	amyloid-beta clearance	The process in which amyloid-beta is removed from extracellular space	7.69 1/13	3.85 1/26	0.043860115
GO:1902930	regulation of alcohol biosynthetic process	Any process that modulates the frequency, rate or extent of alcohol biosynthetic process	7.69 1/13	3.70 1/27	0.044858905
GO:0006631	fatty acid metabolic process	The chemical reactions and pathways involving fatty acids, aliphatic	15.38 2/13	0.63 2/316	0.044858905
GO:0009595	detection of biotic stimulus	The series of events in which a biotic stimulus, one caused or produced by a living organism	7.69 1/13	3.70 1/27	0.044858905
GO:0042744	hydrogen peroxide catabolic process	The chemical reactions and pathways resulting in the breakdown of hydrogen peroxide	7.69 1/13	3.70 1/27	0.044858905
GO:0001941	postsynaptic membrane organization	A process which results in the assembly, arrangement of constituents	7.69 1/13	3.70 1/27	0.044858905
GO:0043114	regulation of vascular permeability	Any process that modulates the extent to which blood vessels can be permeable	7.69 1/13	3.70 1/27	0.044858905
GO:0048662	negative regulation of smooth muscle cell proliferation	Any process that stops, prevents or reduces the rate or extent of smooth muscle cell proliferation	7.69 1/13	3.57 1/28	0.046277957
GO:0060998	regulation of dendritic spine development	Any process that modulates the rate, frequency, or extent of dendritic spine development	7.69 1/13	3.57 1/28	0.046277957
GO:0048878	chemical homeostasis	Any biological process involved in the maintenance of an internal environment	23.08 3/13	0.33 3/900	0.046277957
GO:0043254	regulation of protein-containing complex assembly	Any process that modulates the frequency, rate or extent of protein-containing complex assembly	15.38 2/13	0.61 2/330	0.047334955
GO:0035025	positive regulation of Rho protein signal transduction	Any process that activates or increases the frequency, rate or extent of Rho protein signal transduction	7.69 1/13	3.45 1/29	0.047334955
GO:0019068	virion assembly	A late phase of the viral life cycle during which all the components of the virion are assembled	7.69 1/13	3.45 1/29	0.047334955
GO:1902229	regulation of intrinsic apoptotic signaling pathway in response to DNA damage	Any process that modulates the frequency, rate or extent of intrinsic apoptotic signaling pathway in response to DNA damage	7.69 1/13	3.45 1/29	0.047334955
GO:0010543	regulation of platelet activation	Any process that modulates the rate or frequency of platelet activation	7.69 1/13	3.33 1/30	0.04836565
GO:0044057	regulation of system process	Any process that modulates the frequency, rate or extent of a system process	15.38 2/13	0.60 2/335	0.04836565
GO:0050795	regulation of behavior	Any process that modulates the frequency, rate or extent of behavior	7.69 1/13	3.33 1/30	0.04836565
GO:0042596	fear response	The response of an organism to a perceived external threat	7.69 1/13	3.33 1/30	0.04836565
GO:1902991	regulation of amyloid precursor protein catabolic process	Any process that modulates the frequency, rate or extent of amyloid precursor protein catabolic process	7.69 1/13	3.33 1/30	0.04836565
GO:0001667	ameboid-type cell migration	Cell migration that is accomplished by extension and retraction of pseudopodia	15.38 2/13	0.59 2/337	0.04836565
GO:0006644	phospholipid metabolic process	The chemical reactions and pathways involving phospholipids, any	15.38 2/13	0.59 2/338	0.048699334
GO:0006928	movement of cell or subcellular component	The directed, self-propelled movement of a cell or subcellular component	30.77 4/13	0.23 4/1707	0.049543195
GO:1900026	positive regulation of substrate adhesion-dependent cell-cell adhesion	Any process that activates or increases the frequency, rate or extent of substrate adhesion-dependent cell-cell adhesion	7.69 1/13	3.12 1/32	0.05106943
GO:0048260	positive regulation of receptor-mediated endocytosis	Any process that activates or increases the frequency, rate or extent of receptor-mediated endocytosis	7.69 1/13	3.03 1/33	0.052031715
GO:0001580	detection of chemical stimulus involved in sensory perception of taste	The series of events required for a bitter taste stimulus to be received	7.69 1/13	3.03 1/33	0.052031715
GO:0010803	regulation of tumor necrosis factor-mediated signaling pathway	Any process that modulates the rate or extent of the tumor necrosis factor-mediated signaling pathway	7.69 1/13	3.03 1/33	0.052031715
GO:0030195	negative regulation of blood coagulation	Any process that stops, prevents, or reduces the frequency, rate or extent of blood coagulation	7.69 1/13	3.03 1/33	0.052031715
GO:0034205	amyloid-beta formation	The generation of amyloid-beta by cleavage of the amyloid precursor protein	7.69 1/13	3.03 1/33	0.052031715
GO:1901575	organic substance catabolic process	The chemical reactions and pathways resulting in the breakdown of an organic substance	30.77 4/13	0.16 6/3856	0.05853875
GO:1900047	negative regulation of hemostasis	Any process that stops, prevents or reduces the frequency, rate or extent of hemostasis	7.69 1/13	2.94 1/34	0.053093937
GO:0001937	negative regulation of endothelial cell proliferation	Any process that stops, prevents, or reduces the rate or extent of endothelial cell proliferation	7.69 1/13	2.94 1/34	0.053093937
GO:0034142	toll-like receptor 4 signaling pathway	Any series of molecular signals generated as a consequence of binding to toll-like receptor 4	7.69 1/13	2.94 1/34	0.053093937
GO:0009968	negative regulation of signal transduction	Any process that stops, prevents, or reduces the frequency, rate or extent of signal transduction	23.08 3/13	0.31 3/964	0.053290293
GO:1902622	regulation of neutrophil migration	Any process that modulates the frequency, rate or extent of neutrophil migration	7.69 1/13	2.86 1/35	0.054011214
GO:0032768	regulation of monooxygenase activity	Any process that modulates the activity of a monooxygenase	7.69 1/13	2.86 1/35	0.054011214
GO:0062208	positive regulation of pattern recognition receptor signaling pathway	Any process that increases the rate, frequency or extent of pattern recognition receptor signaling pathway	7.69 1/13	2.86 1/35	0.054011214
GO:0043030	regulation of macrophage activation	Any process that modulates the frequency or rate of macrophage activation	7.69 1/13	2.86 1/35	0.054011214
GO:0050819	negative regulation of coagulation	Any process that stops, prevents, or reduces the frequency, rate or extent of coagulation	7.69 1/13	2.78 1/36	0.055283676
GO:0050913	sensory perception of bitter taste	The series of events required to receive a bitter taste stimulus	7.69 1/13	2.78 1/36	0.055283676
GO:0006509	membrane protein ectodomain proteolysis	The proteolytic cleavage of transmembrane proteins and release of ectodomains	7.69 1/13	2.70 1/37	0.056672733
GO:0007264	small GTPase mediated signal transduction	Any series of molecular signals in which a small monomeric GTPase is involved	15.38 2/13	0.53 2/378	0.057276578
GO:0044248	cellular catabolic process	The chemical reactions and pathways resulting in the breakdown of a cellular component	30.77 4/13	0.22 4/1814	0.057824709
GO:0050912	detection of chemical stimulus involved in sensory perception of taste	The series of events involved in the perception of taste in which a chemical stimulus is detected	7.69 1/13	2.63 1/38	0.057824709
GO:0048523	negative regulation of cellular process	Any process that stops, prevents, or reduces the frequency, rate or extent of a cellular process	15.38 6/13	0.16 6/3856	0.05853875
GO:0034113	heterotypic cell-cell adhesion	The attachment of a cell to a cell of a different type via adhesion molecules	7.69 1/13	2.56 1/39	0.059026748
GO:0050709	negative regulation of protein secretion	Any process that stops, prevents, or reduces the frequency, rate or extent of protein secretion	7.69 1/13	2.50 1/40	0.05929432
GO:0051055	negative regulation of lipid biosynthetic process	Any process that stops, prevents, or reduces the frequency, rate or extent of lipid biosynthetic process	7.69 1/13	2.50 1/40	0.05929432
GO:0010648	negative regulation of cell communication	Any process that decreases the frequency, rate or extent of cell-cell communication	23.08 3/13	0.29 3/1021	0.05929432
GO:0050435	amyloid-beta metabolic process	The chemical reactions and pathways involving amyloid-beta, a glycoprotein	7.69 1/13	2.50 1/40	0.05929432

GO:0046474	glycerophospholipid biosynthetic process	The chemical reactions and pathways resulting in the formation of glycerophospholipids	7.69 1/13	0.64 1/156	0.140513436
GO:0031032	actin cytoskeleton organization	A process that is carried out at the cellular level which results in the organization of the actin cytoskeleton	7.69 1/13	0.64 1/157	0.141176059
GO:0006469	negative regulation of protein kinase activity	Any process that stops, prevents, or reduces the frequency, rate or extent of protein kinase activity	7.69 1/13	0.63 1/158	0.141639878
GO:0051495	positive regulation of cytoskeleton organization	Any process that activates or increases the frequency, rate or extent of cytoskeleton organization	7.69 1/13	0.63 1/158	0.141639878
GO:0071216	cellular response to biotic stimulus	Any process that results in a change in state or activity of a cell in response to a biotic stimulus	7.69 1/13	0.63 1/159	0.142100623
GO:0031349	positive regulation of defense response	Any process that activates or increases the frequency, rate or extent of defense response	7.69 1/13	0.63 1/159	0.142100623
GO:0007611	learning or memory	The acquisition and processing of information and/or the storage and retrieval of information	7.69 1/13	0.62 1/161	0.143604767
GO:0051248	negative regulation of protein metabolic process	Any process that stops, prevents, or reduces the frequency, rate or extent of protein metabolism	15.38 2/13	0.24 2/839	0.144590764
GO:0007186	G protein-coupled receptor signaling pathway	A series of molecular signals that proceeds with an activated G protein-coupled receptor	23.08 3/13	0.17 3/1776	0.145417166
GO:0051402	neuron apoptotic process	Any apoptotic process in a neuron, the basic cellular unit of nervous tissue	7.69 1/13	0.61 1/164	0.145548879
GO:0072593	reactive oxygen species metabolic process	The chemical reactions and pathways involving reactive oxygen species	7.69 1/13	0.60 1/167	0.147877068
GO:0030163	protein catabolic process	The chemical reactions and pathways resulting in the breakdown of a protein	15.38 2/13	0.23 2/855	0.148478489
GO:0002685	regulation of leukocyte migration	Any process that modulates the frequency, rate, or extent of leukocyte migration	7.69 1/13	0.59 1/169	0.148743611
GO:0034612	response to tumor necrosis factor	Any process that results in a change in state or activity of a cell or organism in response to tumor necrosis factor	7.69 1/13	0.59 1/169	0.148743611
GO:0002699	positive regulation of immune effector process	Any process that activates or increases the frequency, rate, or extent of immune effector process	7.69 1/13	0.59 1/169	0.148743611
GO:0033673	negative regulation of kinase activity	Any process that stops, prevents, or reduces the frequency, rate or extent of kinase activity	7.69 1/13	0.58 1/172	0.150983994
GO:0001932	regulation of protein phosphorylation	Any process that modulates the frequency, rate or extent of protein phosphorylation	15.38 2/13	0.23 2/867	0.150983994
GO:2001234	negative regulation of apoptotic signaling pathway	Any process that stops, prevents or reduces the frequency, rate or extent of apoptotic signaling	7.69 1/13	0.57 1/174	0.152295279
GO:0010632	regulation of epithelial cell migration	Any process that modulates the frequency, rate or extent of epithelial cell migration	7.69 1/13	0.57 1/176	0.153746068
GO:0051651	maintenance of location in cell	Any process in which a substance or cellular entity, such as a protein, maintains its location in a cell	7.69 1/13	0.56 1/177	0.154364585
GO:0050920	regulation of chemotaxis	Any process that modulates the frequency, rate or extent of chemotaxis	7.69 1/13	0.56 1/178	0.154980931
GO:1901214	regulation of neuron death	Any process that modulates the frequency, rate or extent of neuron death	7.69 1/13	0.56 1/179	0.155385135
GO:0006457	protein folding	The process of assisting in the covalent and noncovalent assembly of a protein	7.69 1/13	0.56 1/179	0.155385135
GO:0017038	protein import	The targeting and directed movement of proteins into a cell or organelle	7.69 1/13	0.55 1/181	0.156817033
GO:0044403	biological process involved in symbiotic interaction	A process carried out by gene products in an organism that enable it to interact symbiotically with another organism	7.69 1/13	0.55 1/182	0.157424785
GO:0030595	leukocyte chemotaxis	The movement of a leukocyte in response to an external stimulus	7.69 1/13	0.55 1/183	0.158034011
GO:0002768	immune response-regulating cell surface receptor signaling pathway	A series of molecular signals initiated by the binding of an extracellular ligand to a cell surface receptor	7.69 1/13	0.54 1/184	0.158421274
GO:2001020	regulation of response to DNA damage stimulus	Any process that modulates the frequency, rate or extent of response to DNA damage	7.69 1/13	0.54 1/184	0.158421274
GO:0008654	phospholipid biosynthetic process	The chemical reactions and pathways resulting in the formation of phospholipids	7.69 1/13	0.54 1/185	0.158601739
GO:0050790	regulation of catalytic activity	Any process that modulates the activity of an enzyme	23.08 3/13	0.16 3/1868	0.158601739
GO:0098742	cell-cell adhesion via plasma-membrane adhesion molecules	The attachment of one cell to another cell via adhesion molecules	7.69 1/13	0.54 1/185	0.158601739
GO:0006909	phagocytosis	A vesicle-mediated transport process that results in the engulfment of a particle	7.69 1/13	0.53 1/188	0.160384562
GO:0034599	cellular response to oxidative stress	Any process that results in a change in state or activity of a cell in response to oxidative stress	7.69 1/13	0.53 1/188	0.160384562
GO:0032496	response to lipopolysaccharide	Any process that results in a change in state or activity of an organism in response to lipopolysaccharide	7.69 1/13	0.53 1/188	0.160384562
GO:0032268	regulation of cellular protein metabolic process	Any process that modulates the frequency, rate or extent of cellular protein metabolism	23.08 3/13	0.16 3/1884	0.160762609
GO:0050890	cognition	The operation of the mind by which an organism becomes aware of and responds to its environment	7.69 1/13	0.53 1/189	0.160762609
GO:0045017	glycerolipid biosynthetic process	The chemical reactions and pathways resulting in the formation of glycerolipids	7.69 1/13	0.53 1/190	0.161351601
GO:0016485	protein processing	Any protein maturation process achieved by the cleavage of a polypeptide	7.69 1/13	0.52 1/192	0.16273845
GO:0051348	negative regulation of transferase activity	Any process that stops or reduces the rate of transferase activity	7.69 1/13	0.51 1/196	0.165714026
GO:0030336	negative regulation of cell migration	Any process that stops, prevents, or reduces the frequency, rate or extent of cell migration	7.69 1/13	0.51 1/197	0.166290792
GO:0051094	positive regulation of developmental process	Any process that activates or increases the rate or extent of development	15.38 2/13	0.21 2/946	0.169194999
GO:0002237	response to molecule of bacterial origin	Any process that results in a change in state or activity of an organism in response to a molecule of bacterial origin	7.69 1/13	0.49 1/204	0.171392867
GO:0007548	sex differentiation	The establishment of the sex of an organism by physical differentiation	7.69 1/13	0.49 1/205	0.171956085
GO:0019932	second-messenger-mediated signaling	Any intracellular signal transduction in which the signal is passed on by second messengers	7.69 1/13	0.49 1/206	0.172291246
GO:0010720	positive regulation of cell development	Any process that increases the rate, frequency or extent of the development of a cell	7.69 1/13	0.49 1/206	0.172291246
GO:2000146	negative regulation of cell motility	Any process that stops, prevents, or reduces the frequency, rate or extent of cell motility	7.69 1/13	0.48 1/207	0.17285013
GO:0007162	negative regulation of cell adhesion	Any process that stops, prevents, or reduces the frequency, rate or extent of cell adhesion	7.69 1/13	0.48 1/208	0.173407081
GO:0070372	regulation of ERK1 and ERK2 cascade	Any process that modulates the frequency, rate or extent of ERK1 and ERK2 cascade	7.69 1/13	0.47 1/211	0.17506641
GO:0031346	positive regulation of cell projection organization	Any process that activates or increases the frequency, rate or extent of cell projection organization	7.69 1/13	0.47 1/211	0.17506641
GO:0051271	negative regulation of cellular component movement	Any process that stops, prevents, or reduces the frequency, rate or extent of cellular component movement	7.69 1/13	0.47 1/211	0.17506641
GO:0070997	neuron death	The process of cell death in a neuron	7.69 1/13	0.47 1/213	0.176163105
GO:0060828	regulation of canonical Wnt signaling pathway	Any process that modulates the rate, frequency, or extent of the canonical Wnt signaling pathway	7.69 1/13	0.47 1/213	0.176163105
GO:0051091	positive regulation of DNA-binding transcription factor activity	Any process that activates or increases the frequency, rate or extent of DNA-binding transcription factor activity	7.69 1/13	0.47 1/215	0.177482151
GO:0044265	cellular macromolecule catabolic process	The chemical reactions and pathways resulting in the breakdown of a macromolecule	15.38 2/13	0.20 2/985	0.17783505
GO:0042325	regulation of phosphorylation	Any process that modulates the frequency, rate or extent of phosphorylation	15.38 2/13	0.20 2/986	0.177901885
GO:0019058	viral life cycle	A set of processes which all viruses follow to ensure survival and reproduction	7.69 1/13	0.46 1/217	0.178333911
GO:0002366	leukocyte activation involved in immune response	A change in morphology and behavior of a leukocyte resulting from external stimuli	7.69 1/13	0.45 1/222	0.181705455
GO:0062197	cellular response to chemical stress	Any process that results in a change in state or activity of a cell in response to chemical stress	7.69 1/13	0.45 1/222	0.181705455
GO:0007517	muscle organ development	The process whose specific outcome is the progression of the development of a muscle	7.69 1/13	0.45 1/224	0.182529035
GO:0070371	ERK1 and ERK2 cascade	An intracellular protein kinase cascade containing at least ERK1 and ERK2	7.69 1/13	0.45 1/224	0.182529035
GO:0002263	cell activation involved in immune response	A change in the morphology or behavior of a cell resulting from external stimuli	7.69 1/13	0.45 1/224	0.182529035
GO:0051246	regulation of protein metabolic process	Any process that modulates the frequency, rate or extent of protein metabolism	23.08 3/13	0.15 3/2025	0.182785027
GO:0022604	regulation of cell morphogenesis	Any process that modulates the frequency, rate or extent of cell morphogenesis	7.69 1/13	0.44 1/228	0.185094999
GO:0009306	protein secretion	The controlled release of proteins from a cell	7.69 1/13	0.44 1/229	0.185614539
GO:0051240	positive regulation of multicellular organismal process	Any process that activates or increases the frequency, rate or extent of multicellular organismal process	15.38 2/13	0.20 2/1022	0.186265341
GO:0110053	regulation of actin filament organization	Any process that modulates the frequency, rate or extent of actin filament organization	7.69 1/13	0.43 1/231	0.18641051
GO:0035592	establishment of protein localization to extracellular region	The directed movement of a protein to a specific location within an extracellular region	7.69 1/13	0.43 1/231	0.18641051
GO:0040013	negative regulation of locomotion	Any process that stops, prevents, or reduces the frequency, rate or extent of locomotion	7.69 1/13	0.43 1/232	0.186924371
GO:0071692	protein localization to extracellular region	Any process in which a protein is transported from one specific location to another specific location	7.69 1/13	0.42 1/236	0.189682612
GO:0097193	intrinsic apoptotic signaling pathway	A series of molecular signals in which an intracellular signal is converted into an apoptotic signal	7.69 1/13	0.42 1/237	0.190188758
GO:0001933	negative regulation of protein phosphorylation	Any process that stops, prevents or reduces the rate of addition of phosphate groups	7.69 1/13	0.41 1/242	0.193670523
GO:0035556	intracellular signal transduction	The process in which a signal is passed on to downstream components	23.08 3/13	0.14 3/2097	0.195003374
GO:0050878	regulation of body fluid levels	Any process that modulates the levels of body fluids	7.69 1/13	0.41 1/246	0.196143493
GO:0032270	positive regulation of cellular protein metabolic process	Any process that activates or increases the frequency, rate or extent of cellular protein metabolism	15.38 2/13	0.19 2/1072	0.199004659
GO:0031667	response to nutrient levels	Any process that results in a change in state or activity of a cell or organism in response to nutrient levels	7.69 1/13	0.40 1/252	0.20006821
GO:0051604	protein maturation	Any process leading to the attainment of the full functional capacity of a protein	7.69 1/13	0.39 1/254	0.20128396
GO:0015849	organic acid transport	The directed movement of organic acids, any acidic compound across a membrane	7.69 1/13	0.39 1/255	0.201763048
GO:0007155	cell adhesion	The attachment of a cell, either to another cell or to an underlying substrate	15.38 2/13	0.18 2/1087	0.201984547
GO:0050678	regulation of epithelial cell proliferation	Any process that modulates the frequency, rate or extent of epithelial cell proliferation	7.69 1/13	0.39 1/256	0.201984547
GO:1901564	organonitrogen compound metabolic process	The chemical reactions and pathways involving organonitrogen compounds	15.38 2/13	0.10 6/5915	0.201984547
GO:0022610	biological adhesion	The attachment of a cell or organism to a substrate, another cell, or another organism	15.38 2/13	0.18 2/1092	0.203227085
GO:0051174	regulation of phosphorus metabolic process	Any process that modulates the frequency, rate or extent of phosphorus metabolism	15.38 2/13	0.18 2/1094	0.203316999
GO:0019220	regulation of phosphate metabolic process	Any process that modulates the frequency, rate or extent of phosphate metabolism	15.38 2/13	0.18 2/1094	0.203316999
GO:0060070	canonical Wnt signaling pathway	The series of molecular signals initiated by binding of a Wnt protein to its receptor	7.69 1/13	0.38 1/260	0.203371287
GO:0042060	wound healing	The series of events that restore integrity to a damaged tissue	7.69 1/13	0.38 1/260	0.203371287

GO:0009593	detection of chemical stimulus	The series of events in which a chemical stimulus is received by a cell	LBP PIGR	15.38	2/13	0.18	2/1107	0.206436292
GO:0051098	regulation of binding	Any process that modulates the frequency, rate or extent of binding	APOE	7.69	1/13	0.37	1/267	0.207900797
GO:0031589	cell-substrate adhesion	The attachment of a cell to the underlying substrate via adhesion molecules	APOA1	7.69	1/13	0.37	1/268	0.208359481
GO:0030111	regulation of Wnt signaling pathway	Any process that modulates the frequency, rate or extent of the Wnt signaling pathway	APOE	7.69	1/13	0.37	1/269	0.208816595
GO:0051051	negative regulation of transport	Any process that stops, prevents, or reduces the frequency, rate or extent of transport	APOE	7.69	1/13	0.37	1/272	0.209920074
GO:0031326	regulation of cellular biosynthetic process	Any process that modulates the frequency, rate or extent of the cellular biosynthetic process	APOA1 APOA4 APOE CLU	30.77	4/13	0.12	4/3385	0.209920074
GO:0042326	negative regulation of phosphorylation	Any process that stops, prevents or decreases the rate of addition of phosphate groups	APOE	7.69	1/13	0.37	1/271	0.209920074
GO:0050794	regulation of cellular process	Any process that modulates the frequency, rate or extent of a cellular process	APOA1 APOA4 APOE CLU	69.23	9/13	0.09	9/10398	0.209920074
GO:0009991	response to extracellular stimulus	Any process that results in a change in state or activity of a cell or its components	APOE	7.69	1/13	0.37	1/273	0.210370081
GO:1901565	organotinogen compound catabolic process	The chemical reactions and pathways resulting in the breakdown of organotinogen compounds	APOE CLU	15.38	2/13	0.12	6/7743	0.210677743
GO:0060326	cell chemotaxis	The directed movement of a motile cell guided by a specific chemical gradient	LBP	7.69	1/13	0.36	1/275	0.211266796
GO:0016032	viral process	A multi-organism process in which a virus is a participant. The other organisms are hosts	APOE	7.69	1/13	0.36	1/276	0.211712862
GO:0009057	macromolecule catabolic process	The chemical reactions and pathways resulting in the breakdown of macromolecules	APOE CLU	15.38	2/13	0.18	2/1142	0.213766539
GO:0002696	positive regulation of leukocyte activation	Any process that activates or increases the frequency, rate, or extent of leukocyte activation	LBP	7.69	1/13	0.36	1/280	0.214004591
GO:0051247	positive regulation of protein metabolic process	Any process that activates or increases the frequency, rate or extent of protein metabolism	APOE CLU	15.38	2/13	0.17	2/1145	0.214135337
GO:0010975	regulation of neuron projection development	Any process that modulates the rate, frequency or extent of neuron projection development	APOE	7.69	1/13	0.36	1/281	0.214181715
GO:0071900	regulation of protein serine/threonine kinase activity	Any process that modulates the rate, frequency, or extent of protein serine/threonine kinase activity	APOE	7.69	1/13	0.35	1/282	0.214618966
GO:0009889	regulation of biosynthetic process	Any process that modulates the frequency, rate or extent of the biosynthetic process	APOA1 APOA4 APOE CLU	30.77	4/13	0.12	4/3433	0.215348593
GO:0050867	positive regulation of cell activation	Any process that activates or increases the frequency, rate or extent of cell activation	LBP	7.69	1/13	0.35	1/286	0.216616035
GO:2001233	regulation of apoptotic signaling pathway	Any process that modulates the frequency, rate or extent of apoptotic signaling	LBP	7.69	1/13	0.35	1/286	0.216616035
GO:0032103	positive regulation of response to external stimulus	Any process that activates, maintains or increases the rate of response to external stimulus	LBP	7.69	1/13	0.35	1/287	0.217046107
GO:0044282	small molecule catabolic process	The chemical reactions and pathways resulting in the breakdown of small molecules	APOE	7.69	1/13	0.35	1/289	0.218165997
GO:0002683	negative regulation of immune system process	Any process that stops, prevents, or reduces the frequency, rate or extent of immune system processes	APOA1	7.69	1/13	0.34	1/294	0.221347817
GO:0050808	synapse organization	A process that is carried out at the cellular level which results in the formation of synapses	APOE	7.69	1/13	0.34	1/296	0.222185296
GO:0032956	regulation of actin cytoskeleton organization	Any process that modulates the frequency, rate or extent of the actin cytoskeleton organization	APOA1	7.69	1/13	0.34	1/296	0.222185296
GO:0007159	leukocyte cell-cell adhesion	The attachment of a leukocyte to another cell via adhesion molecules	APOA4	7.69	1/13	0.34	1/298	0.223017081
GO:0050804	modulation of chemical synaptic transmission	Any process that modulates the frequency or amplitude of synaptic transmission	APOE	7.69	1/13	0.34	1/298	0.223017081
GO:0099177	regulation of trans-synaptic signaling	Any process that modulates the frequency, rate or extent of trans-synaptic signaling	APOE	7.69	1/13	0.33	1/299	0.223430852
GO:0031399	regulation of protein modification process	Any process that modulates the frequency, rate or extent of protein modification	APOA1 APOE	15.38	2/13	0.17	2/1192	0.224361059
GO:0010035	response to inorganic substance	Any process that results in a change in state or activity of a cell or its components	APOA4	7.69	1/13	0.33	1/304	0.226290751
GO:0048732	gland development	The process whose specific outcome is the progression of a gland	APOA1	7.69	1/13	0.33	1/306	0.227373454
GO:0003008	system process	A multicellular organismal process carried out by any of the organs or tissues	APOA1 APOE PIGR	23.08	3/13	0.13	3/2314	0.228258451
GO:0051606	detection of stimulus	The series of events in which a stimulus is received by a cell or organism	LBP PIGR	15.38	2/13	0.16	2/1215	0.230084939
GO:0051223	regulation of protein transport	Any process that modulates the frequency, rate or extent of protein transport	APOE	7.69	1/13	0.32	1/314	0.231938893
GO:0051346	negative regulation of hydrolase activity	Any process that stops or reduces the rate of hydrolase activity	APOA1	7.69	1/13	0.32	1/317	0.233392136
GO:0006874	cellular calcium ion homeostasis	Any process involved in the maintenance of an internal steady state of calcium ion concentration	APOE	7.69	1/13	0.32	1/317	0.233392136
GO:0008015	blood circulation	The flow of blood through the body of an animal, enabling the transport of substances	APOE	7.69	1/13	0.31	1/320	0.235114394
GO:0045936	negative regulation of phosphate metabolic process	Any process that stops, prevents, or reduces the frequency, rate or extent of phosphate metabolism	APOE	7.69	1/13	0.31	1/321	0.23522024
GO:0010563	negative regulation of phosphorus metabolic process	Any process that decreases the frequency, rate or extent of phosphorus metabolism	APOE	7.69	1/13	0.31	1/321	0.23522024
GO:0032970	regulation of actin filament-based process	Any process that modulates the frequency, rate or extent of actin filament-based processes	APOA1	7.69	1/13	0.31	1/324	0.236929371
GO:0009611	response to wounding	Any process that results in a change in state or activity of a cell or its components	APOE	7.69	1/13	0.31	1/326	0.237970511
GO:0050574	calcium ion homeostasis	Any process involved in the maintenance of an internal steady state of calcium ion concentration	APOE	7.69	1/13	0.30	1/328	0.239007586
GO:0034248	regulation of cellular amide metabolic process	Any process that modulates the frequency, rate or extent of cellular amide metabolism	APOE	7.69	1/13	0.30	1/329	0.239383041
GO:0001819	positive regulation of cytokine production	Any process that activates or increases the frequency, rate or extent of cytokine production	LBP	7.69	1/13	0.30	1/330	0.239757211
GO:0051090	regulation of DNA-binding transcription factor activity	Any process that modulates the frequency, rate or extent of DNA-binding transcription factor activity	CLU	7.69	1/13	0.30	1/333	0.24144015
GO:0070201	regulation of establishment of protein localization	Any process that modulates the frequency, rate or extent of protein localization	APOE	7.69	1/13	0.30	1/336	0.242957053
GO:0006796	phosphate-containing compound metabolic process	The chemical reactions and pathways involving the phosphate-containing compounds	APOA1 APOA4 APOE	23.08	3/13	0.12	3/2404	0.242957053
GO:0003013	cellular system process	A organ system process carried out by any of the organs or tissues	APOE	7.69	1/13	0.29	1/342	0.246154629
GO:0022607	cellular component assembly	The aggregation, arrangement and bonding together of a cellular component	APOA1 APOA4 APOE CLU	30.77	4/13	0.11	4/3663	0.246154629
GO:0006793	phosphorus metabolic process	The chemical reactions and pathways involving the nonmetallic element phosphorus	APOA1 APOA4 APOE	23.08	3/13	0.12	3/2425	0.246523915
GO:0045785	positive regulation of cell adhesion	Any process that activates or increases the frequency, rate or extent of cell adhesion	APOA1	7.69	1/13	0.29	1/345	0.247515849
GO:0022407	regulation of cell-cell adhesion	Any process that modulates the frequency, rate or extent of cell-cell adhesion	APOA1	7.69	1/13	0.29	1/346	0.247870716
GO:0071396	cellular response to lipid	Any process that results in a change in state or activity of a cell in response to lipids	LBP	7.69	1/13	0.29	1/347	0.24793472
GO:0072503	cellular divalent inorganic cation homeostasis	Any process involved in the maintenance of an internal steady state of divalent inorganic cation concentration	APOE	7.69	1/13	0.29	1/347	0.24793472
GO:0043065	positive regulation of apoptotic process	Any process that activates or increases the frequency, rate or extent of apoptosis	CLU	7.69	1/13	0.29	1/349	0.248928016
GO:0032501	multicellular organismal process	Any biological process, occurring at the level of a multicellular organism	APOA1 APOA4 APOE CN	46.15	6/13	0.09	6/6399	0.250398406
GO:0016055	Wnt signaling pathway	The series of molecular signals initiated by binding of a Wnt protein to its receptor	APOE	7.69	1/13	0.28	1/355	0.252177649
GO:1903530	regulation of secretion by cell	Any process that modulates the frequency, rate or extent of secretion	APOE	7.69	1/13	0.25	1/357	0.252862676
GO:1987338	cell-cell signaling by wnt	Any process that mediates the transfer of information from one cell to another	APOE	7.69	1/13	0.28	1/357	0.252862676
GO:0043068	positive regulation of programmed cell death	Any process that activates or increases the frequency, rate or extent of programmed cell death	APOE	7.69	1/13	0.28	1/360	0.254469765
GO:0060284	regulation of cell development	Any process that modulates the rate, frequency or extent of cell development	APOA1	7.69	1/13	0.28	1/361	0.254807102
GO:0072507	divalent inorganic cation homeostasis	Any process involved in the maintenance of an internal steady state of divalent inorganic cation concentration	APOE	7.69	1/13	0.27	1/364	0.256403624
GO:0006468	protein phosphorylation	The process of introducing a phosphate group onto a protein	APOA1 APOE	15.38	2/13	0.15	2/1340	0.258358008
GO:0043410	positive regulation of MAPK cascade	Any process that activates or increases the frequency, rate or extent of the MAPK cascade	APOE	7.69	1/13	0.27	1/373	0.261451749
GO:0090066	regulation of anatomical structure size	Any process that modulates the size of an anatomical structure	APOE	7.69	1/13	0.26	1/379	0.264888846
GO:0044089	positive regulation of cellular component biogenesis	Any process that activates or increases the frequency, rate or extent of cellular component biogenesis	APOA1	7.69	1/13	0.26	1/382	0.266445924
GO:1901361	organic cyclic compound catabolic process	The chemical reactions and pathways resulting in the breakdown of organic cyclic compounds	APOE	7.69	1/13	0.26	1/386	0.268614067
GO:0010942	positive regulation of cell death	Any process that increases the rate or frequency of cell death	CLU	7.69	1/13	0.26	1/388	0.269230092
GO:0031400	negative regulation of protein modification process	Any process that stops, prevents, or reduces the frequency, rate or extent of protein modification	APOE	7.69	1/13	0.26	1/388	0.269230092
GO:0043161	proteasome-mediated ubiquitin-dependent protein catabolic process	The chemical reactions and pathways resulting in the breakdown of proteins	CLU	7.69	1/13	0.26	1/391	0.27076494
GO:0030335	regulation of cell migration	Any process that activates or increases the frequency, rate or extent of cell migration	LBP	7.69	1/13	0.25	1/393	0.271680698
GO:0007015	actin filament organization	A process that is carried out at the cellular level which results in the formation of actin filaments	APOA1	7.69	1/13	0.25	1/396	0.272891771
GO:0050778	positive regulation of immune response	Any process that activates or increases the frequency, rate or extent of immune response	LBP	7.69	1/13	0.25	1/396	0.272891771
GO:0010638	positive regulation of organelle organization	Any process that increases the frequency, rate or extent of organelle organization	APOA1	7.69	1/13	0.25	1/398	0.273798258
GO:0051046	regulation of secretion	Any process that modulates the frequency, rate or extent of the secretion process	APOE	7.69	1/13	0.25	1/400	0.274701
GO:0044085	cellular component biogenesis	A process that results in the biosynthesis of constituent macromolecules	APOA1 APOA4 APOE CLU	30.77	4/13	0.10	4/3907	0.280759789
GO:0034613	cellular protein localization	Any process in which a protein is transported to, and/or maintained in, a specific cellular compartment	APOE PIGR	15.38	2/13	0.14	2/1432	0.280980247
GO:2000147	positive regulation of cell motility	Any process that activates or increases the frequency, rate or extent of cell motility	LBP	7.69	1/13	0.24	1/412	0.280998782
GO:0070727	cellular macromolecule localization	Any process in which a macromolecule is transported to, and/or maintained in, a specific cellular compartment	APOE PIGR	15.38	2/13	0.14	2/1438	0.282093234
GO:0051272	positive regulation of cellular component movement	Any process that activates or increases the frequency, rate or extent of cellular component movement	LBP	7.69	1/13	0.24	1/417	0.283353704
GO:0034645	cellular macromolecule biosynthetic process	The chemical reactions and pathways resulting in the formation of macromolecules	APOA1 APOE	15.38	2/13	0.14	2/1449	0.2846592
GO:0050789	regulation of biological process	Any process that modulates the frequency, rate or extent of a biological process	APOA1 APOA4 APOE CLU	69.23	9/13	0.08	9/11175	0.285250534
GO:1905114	cell surface receptor signaling pathway involved in cell-cell communication	Any cell surface receptor signaling pathway that is involved in cell-cell communication	APOE	7.69	1/13	0.24	1/424	0.286552791
GO:0040017	positive regulation of locomotion	Any process that activates or increases the frequency, rate or extent of locomotion	LBP	7.69	1/13	0.24	1/425	0.286821692
GO:0033554	cellular response to stress	Any process that results in a change in state or activity of a cell in response to stress	APOA4 CLU	15.38	2/13	0.14	2/1463	0.287441725
GO:0120035	regulation of plasma membrane bounded cell projection	Any process that modulates the frequency, rate or extent of a plasma membrane bounded cell projection	APOE	7.69	1/13	0.23	1/433	0.290888498
GO:0006875	cellular metal ion homeostasis	Any process involved in the maintenance of an internal steady state of metal ion concentration	APOE	7.69	1/13	0.23	1/435	0.291734768
GO:0051493	regulation of cytoskeleton organization	Any process that modulates the frequency, rate or extent of cytoskeleton organization	APOA1	7.69	1/13	0.23	1/437	0.292577709
GO:0090407	organophosphate biosynthetic process	The chemical reactions and pathways resulting in the biosynthesis of organophosphates	APOA1	7.69	1/13	0.23	1/439	0.293417335
GO:0031344	regulation of cell projection organization	Any process that modulates the frequency, rate or extent of a cell projection	APOE	7.69	1/13	0.23	1/441	0.294253657
GO:0002694	regulation of leukocyte activation	Any process that modulates the frequency, rate, or extent of leukocyte activation	LBP	7.69	1/13	0.23	1/444	0.295667245
GO:0061061	muscle structure development	The progression of a muscle structure over time, from its formation to its maintenance	CNTFR	7.69	1/13	0.22	1/445	0.295916443
GO:0048514	blood vessel morphogenesis	The process in which the anatomical structures of blood vessels are formed	APOE	7.69	1/13	0.22	1/448	0.29732078
GO:0007190	apoptotic signaling pathway	A series of molecular signals which triggers the apoptotic death of a cell	CLU	7.69	1/13	0.22	1/459	0.303315344
GO:0008285	negative regulation of cell population proliferation	Any process that stops, prevents or reduces the rate or extent of cell population proliferation	APOE	7.69	1/13	0.21	1/469	0.308685376
GO:0010604	positive regulation of macromolecule metabolic process	Any process that increases the frequency, rate or extent of macromolecule metabolism	APOE CLU LBP	23.08	3/13	0.11	3/2795	0.311072191
GO:1901566	organotinogen compound biosynthetic process	The chemical reactions and pathways resulting in the formation of organotinogen compounds	APOA1 APOE	15.38	2/13	0.13	2/1575	0.315851788
GO:0030003	cellular cation homeostasis	Any process involved in the maintenance of an internal steady state of cation concentration	APOE	7.69	1/13	0.20	1/491	0.320051181
GO:0048468	cell development	The process whose specific outcome is the progression of the cell	APOA1 APOE	15.38	2/13	0.13	2/1592	0.320052147
GO:0048598	embryonic morphogenesis	The process in which anatomical structures are generated and organized	APOA1	7.69	1/13	0.20	1/494	0.321015759
GO:0055065	metal ion homeostasis	Any process involved in the maintenance of an internal steady state of metal ion concentration	APOE	7.69	1/13	0.20	1/495	

GO:0010468	regulation of gene expression	Any process that modulates the frequency, rate or extent of gene expression	30.77 4/13	0.09 4/4340	0.345279159
GO:0000904	cell morphogenesis involved in differentiation	The change in form (cell shape and size) that occurs when relative cell growth is greater than cell division	7.69 1/13	0.18 1/552	0.346253185
GO:0055080	cation homeostasis	Any process involved in the maintenance of an internal steady state of cation concentration	7.69 1/13	0.18 1/556	0.347983958
GO:0098771	inorganic ion homeostasis	Any process involved in the maintenance of an internal steady state of inorganic ion concentration	7.69 1/13	0.18 1/565	0.352322678
GO:0030155	regulation of cell adhesion	Any process that modulates the frequency, rate or extent of attachment of cells	7.69 1/13	0.17 1/573	0.356106743
GO:0055082	cellular chemical homeostasis	Any biological process involved in the maintenance of an internal steady state of chemical composition	7.69 1/13	0.17 1/586	0.362439936
GO:0140352	export from cell	The directed movement of some substance from a cell, into the extracellular space	7.69 1/13	0.17 1/587	0.362562147
GO:0043549	regulation of kinase activity	Any process that modulates the frequency, rate or extent of kinase activity	7.69 1/13	0.17 1/588	0.363683779
GO:0006511	ubiquitin-dependent protein catabolic process	The chemical reactions and pathways resulting in the breakdown of a protein into peptides and amino acids	7.69 1/13	0.17 1/589	0.362804833
GO:0000165	MAPK cascade	An intracellular protein kinase cascade containing at least a MAPK, an RAF kinase, and a RAS GTPase	7.69 1/13	0.17 1/591	0.363436429
GO:0044267	cellular protein metabolic process	The chemical reactions and pathways involving a specific protein, resulting in its breakdown into peptides and amino acids	30.77 4/13	0.09 4/4461	0.363621939
GO:0032880	regulation of protein localization	Any process that modulates the frequency, rate or extent of any protein's localization	7.69 1/13	0.17 1/594	0.363791845
GO:0045597	positive regulation of cell differentiation	Any process that activates or increases the frequency, rate or extent of cell differentiation	7.69 1/13	0.17 1/594	0.363791845
GO:0050801	ion homeostasis	Any process involved in the maintenance of an internal steady state of ion concentration	7.69 1/13	0.17 1/602	0.367454167
GO:0019941	modification-dependent protein catabolic process	The chemical reactions and pathways resulting in the breakdown of a protein into peptides and amino acids	7.69 1/13	0.17 1/603	0.367564965
GO:0030036	actin cytoskeleton organization	A process that is carried out at the cellular level which results in the organization of actin filaments	7.69 1/13	0.16 1/611	0.370796073
GO:0043632	modification-dependent macromolecule catabolic process	The chemical reactions and pathways resulting in the breakdown of a macromolecule into smaller molecules	7.69 1/13	0.16 1/611	0.370796073
GO:0065007	biological regulation	Any process that modulates a measurable attribute of any biological process	69.23 9/13	0.08 9/11905	0.371110441
GO:0050793	regulation of developmental process	Any process that modulates the frequency, rate or extent of development	15.38 2/13	0.11 2/1822	0.37196899
GO:0050877	nervous system process	A organ system process carried out by any of the organs or tissues of the nervous system	15.38 2/13	0.11 2/1827	0.372955229
GO:0019222	regulation of metabolic process	Any process that modulates the frequency, rate or extent of the chemical reactions and pathways involving small molecules	38.46 5/13	0.08 5/5976	0.376657959
GO:0046903	secretion	The controlled release of a substance by a cell or a tissue	7.69 1/13	0.16 1/645	0.385588701
GO:0035239	tube morphogenesis	The process in which the anatomical structures of a tube are generated and organized	7.69 1/13	0.15 1/646	0.385666206
GO:0008284	positive regulation of cell population proliferation	Any process that activates or increases the rate or extent of cell population growth	7.69 1/13	0.15 1/651	0.387686058
GO:0036211	protein modification process	The covalent alteration of one or more amino acids occurring in a protein	23.08 3/13	0.09 3/3236	0.388693709
GO:0006464	cellular protein modification process	The covalent alteration of one or more amino acids occurring in a protein	23.08 3/13	0.09 3/3236	0.388693709
GO:0019725	cellular homeostasis	Any process involved in the maintenance of an internal steady state of cellular composition	7.69 1/13	0.15 1/660	0.390795323
GO:0003006	developmental process involved in reproduction	A developmental process in which a progressive change in the state of a cell results in its division	7.69 1/13	0.15 1/666	0.393259156
GO:0006974	cellular response to DNA damage stimulus	Any process that results in a change in state or activity of a cell in response to a DNA damage stimulus	7.69 1/13	0.15 1/668	0.393799491
GO:0022603	regulation of anatomical structure morphogenesis	Any process that modulates the frequency, rate or extent of anatomical structure morphogenesis	7.69 1/13	0.15 1/671	0.394813775
GO:0051172	negative regulation of nitrogen compound metabolic process	Any process that stops, prevents, or reduces the frequency, rate or extent of a nitrogen compound metabolic process	15.38 2/13	0.10 2/1924	0.395060766
GO:0030029	actin filament-based process	Any cellular process that depends upon or alters the actin cytoskeleton	7.69 1/13	0.15 1/675	0.395880714
GO:0051338	regulation of transferase activity	Any process that modulates the frequency, rate or extent of transferase activity	7.69 1/13	0.15 1/676	0.395937736
GO:0002684	positive regulation of immune system process	Any process that activates or increases the frequency, rate, or extent of an immune system process	7.69 1/13	0.15 1/677	0.395994347
GO:0008104	protein localization	Any process in which a protein is transported to, or maintained in, a specific cellular compartment	15.38 2/13	0.10 2/1967	0.405004369
GO:0031175	neuron projection development	The process whose specific outcome is the progression of a neuron	7.69 1/13	0.14 1/701	0.406393709
GO:0016567	protein ubiquitination	The process in which one or more ubiquitin groups are added to a protein	7.69 1/13	0.14 1/702	0.406431971
GO:0045321	leukocyte activation	A change in morphology and behavior of a leukocyte resulting from a stimulus	7.69 1/13	0.14 1/713	0.411084482
GO:0043412	macromolecule modification	The covalent alteration of one or more monomeric units in a polymer	23.08 3/13	0.09 3/3413	0.420547459
GO:0008090	regulation of primary metabolic process	Any process that modulates the frequency, rate or extent of the chemical reactions and pathways involving small molecules	30.77 4/13	0.08 4/4857	0.42410368
GO:0032446	protein modification by small protein conjugation	A protein modification process in which one or more groups of a protein are modified by a small protein	7.69 1/13	0.13 1/758	0.430150421
GO:0016043	cellular component organization	A process that results in the assembly, arrangement of constituent parts, or organization of a cellular component	38.46 5/13	0.08 5/6354	0.430796145
GO:0007167	enzyme linked receptor protein signaling pathway	Any series of molecular signals initiated by the binding of an extracellular ligand to a transmembrane receptor	7.69 1/13	0.13 1/778	0.438101381
GO:0009653	anatomical structure morphogenesis	The process in which anatomical structures are generated and organized	15.38 2/13	0.09 2/2107	0.43827074
GO:0032269	negative regulation of cellular protein metabolic process	Any process that stops, prevents, or reduces the frequency, rate or extent of a cellular protein metabolic process	7.69 1/13	0.13 1/792	0.443306075
GO:1901316	organic cyclic compound biosynthetic process	The chemical reactions and pathways resulting in the formation of organic cyclic compounds	23.08 3/13	0.08 3/3552	0.446397462
GO:0035295	tube development	The process whose specific outcome is the progression of a tube	7.69 1/13	0.12 1/804	0.446649717
GO:0000902	cell morphogenesis	The developmental process in which the size or shape of a cell is generated and organized	7.69 1/13	0.12 1/802	0.446649717
GO:0072359	circulatory system development	The process whose specific outcome is the progression of the circulatory system	7.69 1/13	0.12 1/804	0.446649717
GO:0031323	regulation of cellular metabolic process	Any process that modulates the frequency, rate or extent of the chemical reactions and pathways involving small molecules	30.77 4/13	0.08 4/5027	0.450445619
GO:0048731	system development	The process whose specific outcome is the progression of an organ system	23.08 3/13	0.08 3/3612	0.456320018

## Loadings on comp 1 Block 'X'

Supplementary Figure S2: sPLs – milk LPL activity results: A. Plot of the XY space, B. Plot of the X space, C. Loadings on component 1 of Block X.

Supplementary Figure S3: Correlation circle plot representing the proteins selected by sPLS-DA with a cut-off at  $r > 0.85$ . Only the proteins selected by sPLS-DA (corresponding to 20% of the total protein dataset) are shown in components 1 and 2 (details of sPLS-DA analysis not shown).
