Foreword

The International Symposium on Symbolic and Algebraic Computation (ISSAC) is the premier conference for research in symbolic computation and computer algebra. ISSAC is the continuation of conferences with the names SYMSAC, EUROCAL, EUROSAM, and EUROCAM, which have alternated between North America and Europe before merging into ISSAC. The whole series started in 1966 with the first ACM Symposium on Symbolic and Algebraic Manipulation, and it has been held annually since 1981. The conference typically presents a range of invited talks, tutorials, poster sessions, software demonstrations, and vendor exhibits, with its center-piece being peer-reviewed contributed research papers.

ISSAC 2023 is the 48th meeting in the series. The meeting was held from the 24th to the 27th of July 2023 in Tromsø, Norway. It was sponsored by the ACM Special Interest Group on Symbolic Manipulation (ACM SIGSAM) of the Association for Computer Machinery (ACM), and also generously supported by

- Maplesoft,
- the Fachgruppe Computeralgebra
- UiT The Arctic University of Norway,
- the Lie-Størmer Center for Fundamental Structures in Computational and Pure Mathematics,
- the Trømsø Research Foundation (TFS),
- the Trond Mohn Foundation (TMS),
- the Research Council of Norway.

As ever, the ISSAC meeting is a showcase for original research contributions on all aspects of computer algebra and symbolic mathematical computation, including:

Algorithmic aspects:

- Exact and symbolic linear, polynomial and differential algebra
- Symbolic-numeric, homotopy, perturbation and series methods
- Computational algebraic geometry, group theory and number theory
- Quantifier elimination and logic
- Computer arithmetic
- Summation, recurrence equations, integration, solution of ODEs and PDEs
- Symbolic methods in other areas of pure and applied mathematics
- Complexity of algebraic algorithms and algebraic complexity

Software aspects:

- Design of symbolic computation packages and systems
- Language design and type systems for symbolic computation
- Data representation
- Consideration for modern hardware
- Algorithm implementation and performance tuning
- Mathematical user interfaces
- Use with systems for digital libraries, courseware, simulation and optimization, theorem proving, computer-aided design, and automatic differentiation, among others.

Application aspects:

- Applications that stretch the current limits of computer algebra algorithms or systems, use computer algebra in new areas or new ways, or apply it in situations with broad impact.

The ISSAC 2023 Program Committee adhered to the highest standards and practices in the evaluation of the submitted research papers, and we are very pleased with the quality of the papers appearing at the conference. The 103 papers submitted to ISSAC 2023 were judged, and accepted or rejected, solely according to their scientific novelty and excellence. The total number of obtained reviews is 246, thus an average of 2.39 referee reports for each submission. A first selection of the submissions occurred, and a number of papers were given the opportunity to be reconsidered after a rebuttal phase. Ultimately 56 contributed papers were accepted for presentation and publication in these Proceedings.

In addition to the contributed research presentations, the program of ISSAC 2023 features three invited talks, three tutorials, a software presentation session, and a poster session. These Proceedings contain all accepted contributed papers, as well as abstracts of the invited talks and tutorials, some of which in extended form.

We gratefully acknowledge the thorough and important work of the Program Committee and the 160 external reviewers, as well as all the authors and speakers for their contributions.

In addition to the dedicated effort of the local organizers, running a large conference such as ISSAC requires the dedicated work of many volunteers. We extend our thanks to them. Without their contributions, the conference would not have been possible.

Alicia Dickenstein (*General Chair*)
Elias Tsigaridas (*Program Committee Chair*)
Cordian Riener (*Local Arrangements Chair*)
Gabriela Jeronimo (*Proceedings Editor*)

Table of Contents

ISSAC 2023 Conference Organization.....	xi
---	----

ISSAC 2023 Sponsor & Supporters	xii
---------------------------------------	-----

Session 1: Invited Talks

• The Complexity of Diagonalization	1
Nikhil Srivastava (<i>University of California</i>)	
• Two Views of \mathbb{P}^3	7
Rekha R. Thomas (<i>University of Washington</i>)	
• Least Distortion Euclidean Embeddings of Flat Tori	13
Frank Vallentin (<i>Universität zu Köln</i>)	
Philippe Moustrou (<i>Institut de Mathématiques de Toulouse</i>)	

Session 2: Tutorial Talks

• Matrix Structures and Matrix Functions	24
Paola Boito (<i>University of Pisa</i>)	
• Invariants: Computation and Applications	31
Irina A. Kogan (<i>North Carolina State University</i>)	
• Algebra-based Loop Analysis	41
Laura Kovács (<i>TU Wien</i>)	

Session 3: Contributed Papers

• The Tropical Nullstellensatz and Positivstellensatz for Sparse Polynomial Systems	43
Marianne Akian (<i>Inria and CMAP, CNRS, École Polytechnique, Institut Polytechnique de Paris</i>)	
Antoine Bèreau (<i>CMAP, CNRS, École Polytechnique, Institut Polytechnique de Paris, and Inria</i>)	
Stéphane Gaubert (<i>Inria and CMAP, CNRS, École Polytechnique, Institut Polytechnique de Paris</i>)	
• Moment Varieties for Mixtures of Products	53
Yulia Alexandr (<i>UC Berkeley</i>)	
Joe Kileel (<i>UT Austin</i>)	
Bernd Sturmfels (<i>MPI-MiS Leipzig and UC Berkeley</i>)	
• An Algorithm to Enumerate Grid Signed Permutation Classes	61
Saúl A. Blanco (<i>Indiana University</i>)	
Daniel E. Skora (<i>Indiana University</i>)	
• Beating Binary Powering for Polynomial Matrices	70
Alin Bostan (<i>Inria</i>)	
Vincent Neiger (<i>Sorbonne Université</i>)	
Sergey Yurkevich (<i>University of Vienna and Inria</i>)	
• Fast Algorithms for Discrete Differential Equations	80
Alin Bostan (<i>Inria</i>)	
Hadrien Notarantonio (<i>Inria</i>)	
Mohab Safey El Din (<i>Sorbonne Université</i>)	
• Validated Root Enclosures for Interval Polynomials with Multiplicities	90
Florent Bréhard (<i>Université de Lille</i>)	
Adrien Poteaux (<i>Université de Lille</i>)	
Léo Soudant (<i>École Normale Supérieure</i>)	

• Generalised Cone Complexes and Tropical Moduli in Polymake	100
Dominic Bunnett (<i>TU Berlin</i>)	
Michael Joswig (<i>TU Berlin</i>)	
Julian Pfeifle (<i>Universitat Politècnica de Catalunya</i>)	
• Real Zeros of Mixed Random Fewnomial Systems	107
Peter Bürgisser (<i>Technische Universität</i>)	
• Certified Simultaneous Isotopic Approximation of Pairs of Curves via Subdivision	116
Michael Burr (<i>Clemson University</i>)	
Michael Byrd (<i>Clemson University</i>)	
• Isolating Clusters of Zeros of Analytic Systems using Arbitrary-Degree Inflation	126
Michael Burr (<i>Clemson University</i>)	
Kisun Lee (<i>University of California</i>)	
Anton Leykin (<i>Georgia Institute of Technology</i>)	
• An Effective Description of the Roots of Multivariates Mod p^k and the Related Igusa's Local Zeta Function	135
Sayak Chakrabarti (<i>Columbia University</i>)	
Nitin Saxena (<i>IIT Kanpur</i>)	
• Deciding First-order Formulas Involving Univariate Mixed Trigonometric-polynomials	145
Rizeng Chen (<i>Peking University</i>)	
Bican Xia (<i>Peking University</i>)	
• Hermite Reduction for D-finite Functions via Integral Bases	155
Shaoshi Chen (<i>KLMM, Academy of Mathematics and Systems Science and University of Chinese Academy of Sciences</i>)	
Lixin Du (<i>Johannes Kepler University</i>)	
Manuel Kauers (<i>Johannes Kepler University</i>)	
• Stability Problems on D-finite Functions	164
Shaoshi Chen (<i>University of Chinese Academy of Sciences</i>)	
Ruyong Feng (<i>University of Chinese Academy of Sciences</i>)	
Zewang Guo (<i>University of Chinese Academy of Sciences</i>)	
Wei Lu (<i>University of Chinese Academy of Sciences</i>)	
• A New Black Box Factorization Algorithm – The Non-monic Case	173
Tian Chen (<i>Simon Fraser University</i>)	
Michael Monagan (<i>Simon Fraser University</i>)	
• Further Results on the Computation of the Annihilator of Integro-differential Operators	182
Thomas Cluzeau (<i>Université de Limoges</i>)	
Camille Pinto (<i>Sorbonne Université - Inria</i>)	
Alban Quadrat (<i>Sorbonne Université - Inria</i>)	
• Hyperelliptic Integrals to Elliptic Integrals	191
Thierry Combet (<i>Université de Bourgogne</i>)	
• Blendstrings: An Environment for Computing with Smooth Functions	199
Robert M. Corless (<i>Maple Transactions</i>)	
• Chinese Remainder Theorem for Bivariate Lexicographic Gröbner Bases	208
Xavier Dahan (<i>Tohoku University</i>)	
• Lazard-style CAD and Equational Constraints	218
James H. Davenport (<i>University of Bath</i>)	
Akshar Nair (<i>University of Bath</i>)	
Gregory Sankaran (<i>University of Bath</i>)	
Ali K. Uncu (<i>Austrian Academy of Sciences and University of Bath</i>)	

- **Sensitivity Analysis of Discrete Preference Functions using Koszul Simplicial Complexes**..... 227
 Jose Divasón (*Universidad de La Rioja*)
 Fatemeh Mohammadi (*UiT The Arctic University of Norway and KU Leuven*)
 Eduardo Sáenz-de-Cabezón (*Universidad de La Rioja*)
