HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Inter-tasks transferability of a subjective cognitive load classification model

1 INTRODUCTION

Generic models for classifying **subjective cognitive load (CL)** are required. Two subjective CL measures exist: NASA-TLX (Hart & Staveland, 1988) and WP questionnaires (Tsang & Velazquez, 1996).

2 METHODOLOGY

Three-class subjective CL models (via LDA) were created for several **cognitive tasks** (N-back, Corsi, Go/No-Go, WCST, Dual task) from Louis et al. (2023) study.

Corsi test material

3 RESULTS

Corsi test alone achieving **80% accuracy**.
Models trained on N-back, WCST, and Dual task could predict the CL classes of Corsi with over **70% accuracy**.

4 CONCLUSION

Gain **time in setting up and training** a classification model.
