HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers. L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Conclusion

Once the complete workflow is achieved on a file, it provides for all peaks (if spectral quality are sufficient), spectral interpretation, molecular formulae, annotations for most peaks. The only limitation is the availability of chemical structures within the data bases. The full processes can takes hours to days depending to the depth of signal annotation (intensity limit) and chromatogram complexity.

As expected, even in model organisms like Penicillium chrysogenum (strain Winsconsin 54-1255) annotation is rather limited. This highlight the fact that there is still many compounds to be discovered.
