HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

NAVIER-STOKES EQUATIONS [1]

Find $(\mathbf{u}(t), p(t)) \in \mathbf{H}_0^1(\Omega) \times L_0^2(\Omega)$ such that:

$$\begin{cases} \partial_t \mathbf{u} - \nu \Delta \mathbf{u} + (\mathbf{u} \cdot \nabla) \mathbf{u} + \nabla p = \mathbf{f}(t) \\ \operatorname{div} \mathbf{u} = 0 \\ \mathbf{u}(0) = \mathbf{u}_0 \end{cases}$$

Difficulties: unsteady, 3D, non linear, constrained.

- \mathbf{u} : velocity of the fluid
- \mathbf{f} : volumic external sources
- ν : kinematic viscosity
- p : pressure / fluid density

Stokes problem:

Find $(\mathbf{u}, p) \in \mathbf{H}_0^1(\Omega) \times L_0^2(\Omega)$ such that:

$$\begin{cases} -\nu \Delta \mathbf{u} + \nabla p = \mathbf{f} \\ \operatorname{div} \mathbf{u} = 0 \end{cases}$$

TIME STEPPING SCHEME (SEMI-IMPLICIT CASE) [2]

Find $(\underline{U}^{m+1}, \underline{P}^{m+1})$ such that:

$$\delta t^{-1} M(\underline{U}^{m+1} - \underline{U}^m) + K \underline{U}^{m+1} + L(\underline{U}^m) \underline{U}^{m+1} - B^T \underline{P}^{m+1} = \underline{F}^{m+1} \text{ and } B \underline{U}^{m+1} = 0.$$

1 **Prediction step:** Find \underline{U}^* such that

$$(M + K + L(\underline{U}^m)) \underline{U}^* = \underline{F}^{m+1} + \delta t^{-1} M \underline{U}^m + B^T \underline{P}^m \quad \text{GMRES}$$

2 **Pressure solver step:** Find δP such that

$$\begin{aligned} B M^{-1} B^T \delta P &= -\delta t^{-1} B \underline{U}^*, & \text{Cholesky or PCG} \\ \underline{P}^{m+1} &= \underline{P}^m + \delta P \end{aligned}$$

3 **Correction step:** Find \underline{U}^{m+1} such that

$$\delta t^{-1} M \underline{U}^{m+1} = \delta t^{-1} M \underline{U}^* + B^T \delta P \quad \text{direct computation}$$

The mass matrix M is diagonal.

Relaxed Courant-Friedrichs-Levy condition vs explicit case.

SPURIOUS VELOCITIES [3]

Non-conforming discretization P_{nc}^1 / P^0 :

- Velocity dof (d per facet) and pressure dof.

- Non conforming FEM: $\int_F [\mathbf{v}_h] = 0$.

Let $\mathbf{f} = \nabla \varphi$, $\varphi \in L_0^2(\Omega) \cap H^1(\Omega)$.Solution to Stokes pb: $(\mathbf{u}, p) = (0, \varphi)$.

$$\int_{\Omega} \mathbf{f} \cdot \mathbf{v}_h = - \sum_{T \in \mathcal{T}_h} \int_T \varphi \operatorname{div} \mathbf{v}_h + \sum_{F \in \mathcal{F}_h} \int_F \varphi [\mathbf{v}_h] \cdot \mathbf{n}_F$$

Second term \rightarrow numerical source.

IMPROVEMENTS [3, 4, 5, 6]

- Increase the ndof of the pressure (TrioCFD):

$$P_{nc}^1 - P^0 P^1$$

Triangle

If $\mathbf{f} = \nabla \varphi$, $(\mathbf{u}, p) = (0, \varphi)$, $\varphi \in P^k$:

$$\|\mathbf{u}_h\|_h \lesssim h^{2d-1}/\nu, \quad \|p - p_h\|_0 \lesssim h^2.$$

- $P_{nc}^1 - P^0 P^1 P^a$: too many dof.

- $\mathbf{H}(\operatorname{div})$ -conforming projection

- Modify F , M and $L(\underline{U}^m)$.

$$P_{nc}^1 - P^0 P^1 P^a$$

Tetrahedra

MULTIPLE POINTS FLUX APPROX. [7]

- Scheme for gradient: approached by G_h
- Add auxiliary unknowns $(p_F)_{F \in K_S}$ (2 per edges).
- Evaluate $G_h(p_T)$, $p_T = \mathbb{1}_T$. **Modify B.**

$$G_h(p_T)|_{Q_{T'}^S} = \frac{3}{2|T'|} \sum_{F|S \in F} (p_F - p_T) \mathbf{n}_F^{T'}.$$

- Continuity conditions to compute $(p_F)_{F \in Q^S}$:

 $Q^S = \cup_T Q_T^S$ (in gray, right picture):

$$[G_h(p_h)] \cdot \mathbf{n}_F = 0.$$

- Substitute the p_F in the system, with p_T and previous systems.

- Boundary Condition: To eliminate the $(p_F)_{F \in K_S^b}$ on the boundary, we use Neumann/Dirichlet condition.

- Properties: Applied to the laplacian problem :

- exact gradient for affine function
- converge with similar assumptions of P1 F.E.M.
- one additional EOC for the pressure if the velocity is affine

- Stokes: Applied MPFA on the pressure gradient with Crouzeix-Raviart element for the velocity :

$$\int_{\Omega} \mathbf{v} \cdot \nabla q \simeq \sum_{T \in \mathcal{T}_h} \sum_{Q \in \mathcal{Q}_h(T)} \int_Q \mathbf{v}_h \cdot G_h(q_h)$$

MPFA DISCRETIZATION FOR THE GRADIENT OF PRESSURE ON THE NAVIER-STOKES PROBLEM

- System :

$$\begin{pmatrix} A & G_{int} & G_{bd} \\ D & 0 & 0 \end{pmatrix} \begin{pmatrix} U \\ P_{int} \\ P_{bd} \end{pmatrix} = \begin{pmatrix} RHS \\ 0 \end{pmatrix}$$

with:

$$(A_{\phi})_{FF'} := \sum_{K \in \mathcal{T}_h} \int_K \nabla \phi_F \cdot \nabla \phi_{F'},$$

$$(D^{\alpha})_{FT} := \sum_{K \in \mathcal{T}_h} \int_K \psi_T^{int} \operatorname{div}(\phi_F \mathbf{e}_{\alpha}),$$

$$(G_{int}^{\alpha})_{TF} := \sum_{K \in \mathcal{T}_h} \int_K \phi_F G_h(\psi_T^{int}) \cdot \mathbf{e}_{\alpha},$$

$$(G_{bd}^{\alpha})_{fF} := \sum_{K \in \mathcal{T}_h} \int_K \phi_F G_h(\psi_f^{bd}) \cdot \mathbf{e}_{\alpha}.$$

- $J_F = \{1, \dots, N_F\}$, $F, F' \in J_F$ - $J_T = \{1, \dots, N_T\}$, $T \in J_T$ - $J_{fb} = \{1, \dots, 2N_{Fb}\}$, $f \in J_{fb}$ - $(\mathbf{e}_{\alpha})_{\alpha \in \{x, y\}}$ Orthonormal basis.- Velocity basis: $(\phi_F \mathbf{e}_{\alpha})_{F \in J_F}$ - Pressure basis $(\psi_T^{int})_{T \in J_T}$ and $(\psi_f^{bd})_{f \in J_b}$ - To determine P_{bd} : we reinforce the zero divergence condition by :

1. Using velocity boundary conditions: Add velocity unknowns on the boundary and use them to reformulate the mass conservation on each border triangle.

2. Constraining the velocity space on the boundary : Let T on the boundary,

$$F \subset \Omega^{\circ}, q_1 \in P^1(T), \int_F [\phi_F \mathbf{e}_{\alpha}] q_1 = 0$$

3. Using approximate Neumann conditions for pressure : $\int_f G_h(p_T) \cdot \mathbf{n}_{\partial\Omega} = \int_f \mathbf{f} \cdot \mathbf{n}_{\partial\Omega}$

Rq: Solutions 1 and 2 impose a mesh restriction. Two different triangles having a face on the boundary cannot share a face.

- Stokes: $1/h = 20$, \mathbf{u} sine function, p affine function, 2D
