LD=Limit of detection; LQ=Limit of quantification; MDL=Method detection limit, MQL= Method quantification limit; *application of the corrective factors defined in Table 2.

Table S2: Accuracy obtained after applying the corrective factor for intracellular and extracellular matrices for each spiking level (mean \pm SD, n=3). Low, Medium and High spiking levels corresponded to 4, 18 and 80 LQs for the intracellular matrix and 4, 22 and 125 LQs for the extracellular matrix.
