Fatty acid (FA); Fatty acid ethyl esters (FAEE); FAMES (fatty acid methyl esters).

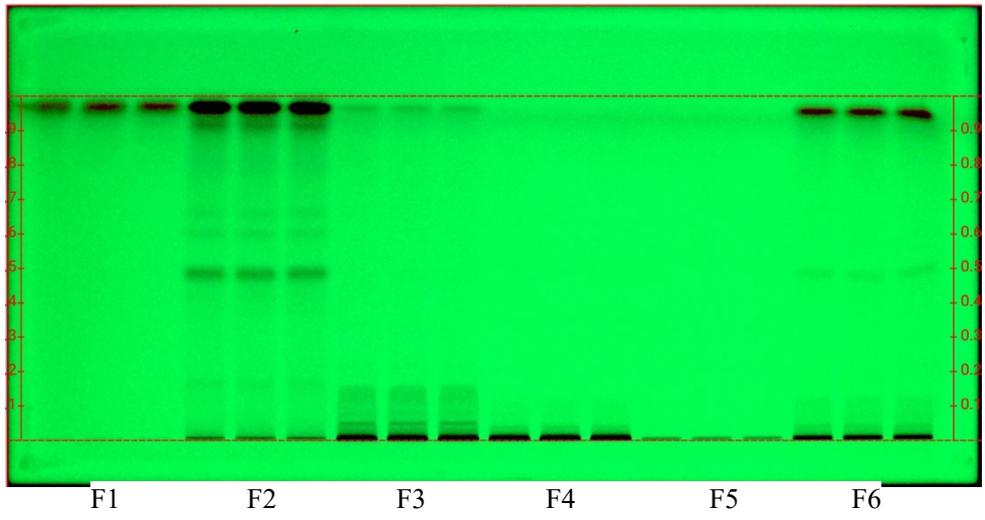

#### 4. TLC plate of all fraction of *Acalypha arvensis* Poepp

Figure S9. TLC plate of all fraction of *Acalypha arvensis* Poepp

HPTLC plates of the six fractions obtained from *A. arvensis*. Fractions were prepared at a concentration of 5mg/mL and deposited on a silica gel 60 F254 20 × 10 cm HPTLC plate (Merck) using the CAMAG Automatic TLC Sampler 4 (ATS 4) depositor (CAMAG, Muttenz, Switzerland). A deposit of 5 µL was thus carried out in three replicates for each fraction. The migration was performed with the eluent system ethyl acetate/methanol (90/10) over a distance of 70 mm with the CAMAG Automatic Developing Chamber 2 (ADC 2). The developed TLC plates were visualized under Visible light (A), UV 254 (B) and 366 nm (C) using the CAMAG TLC Visualizer.
