HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

SCIENTIFIC MACHINE LEARNING AND PHYSICS-AUGMENTED NEURAL NETWORKS FOR HYBRID DIGITAL TWINS

A. BENADY, F. LEHMANN, A. PULIKKATHODI, E. BARANGER, L. CHAMOIN, F. GATTI, D. CLOUTEAU
ludovic.chamoin@ens-paris-saclay.fr

Keywords: Artificial Neural Networks, Data-driven mechanics, Global-local coupling, Constitutive laws, Neural operators

Spotwelds modelling with local/global coupling

Objective : develop a quick and accurate meta-model of spot-welded patches and integrate seamlessly into explicit dynamic FEM solvers

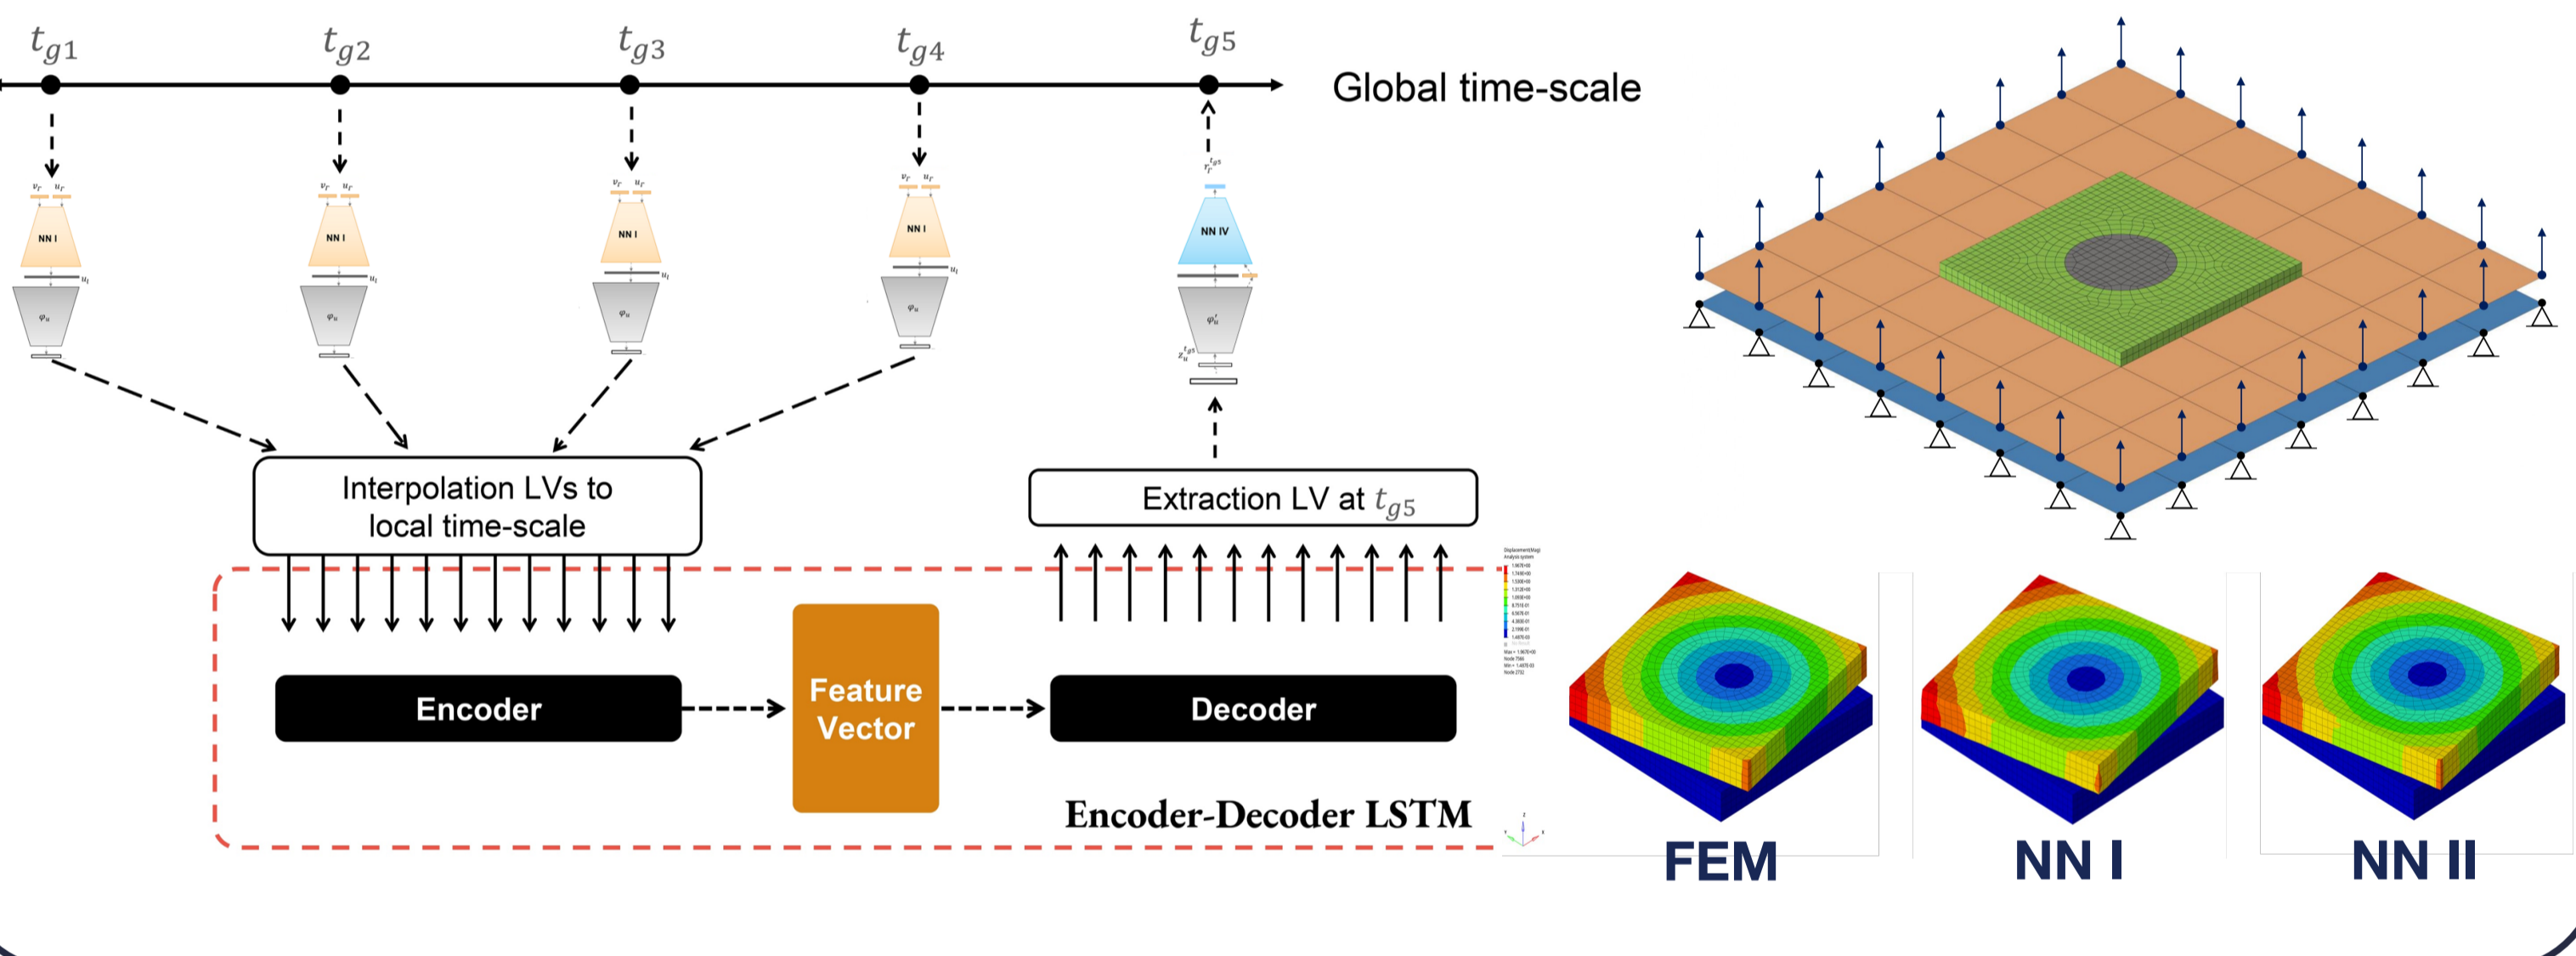

mapping from interface velocities to reaction forces

NN I maps interface quantities to local displacements

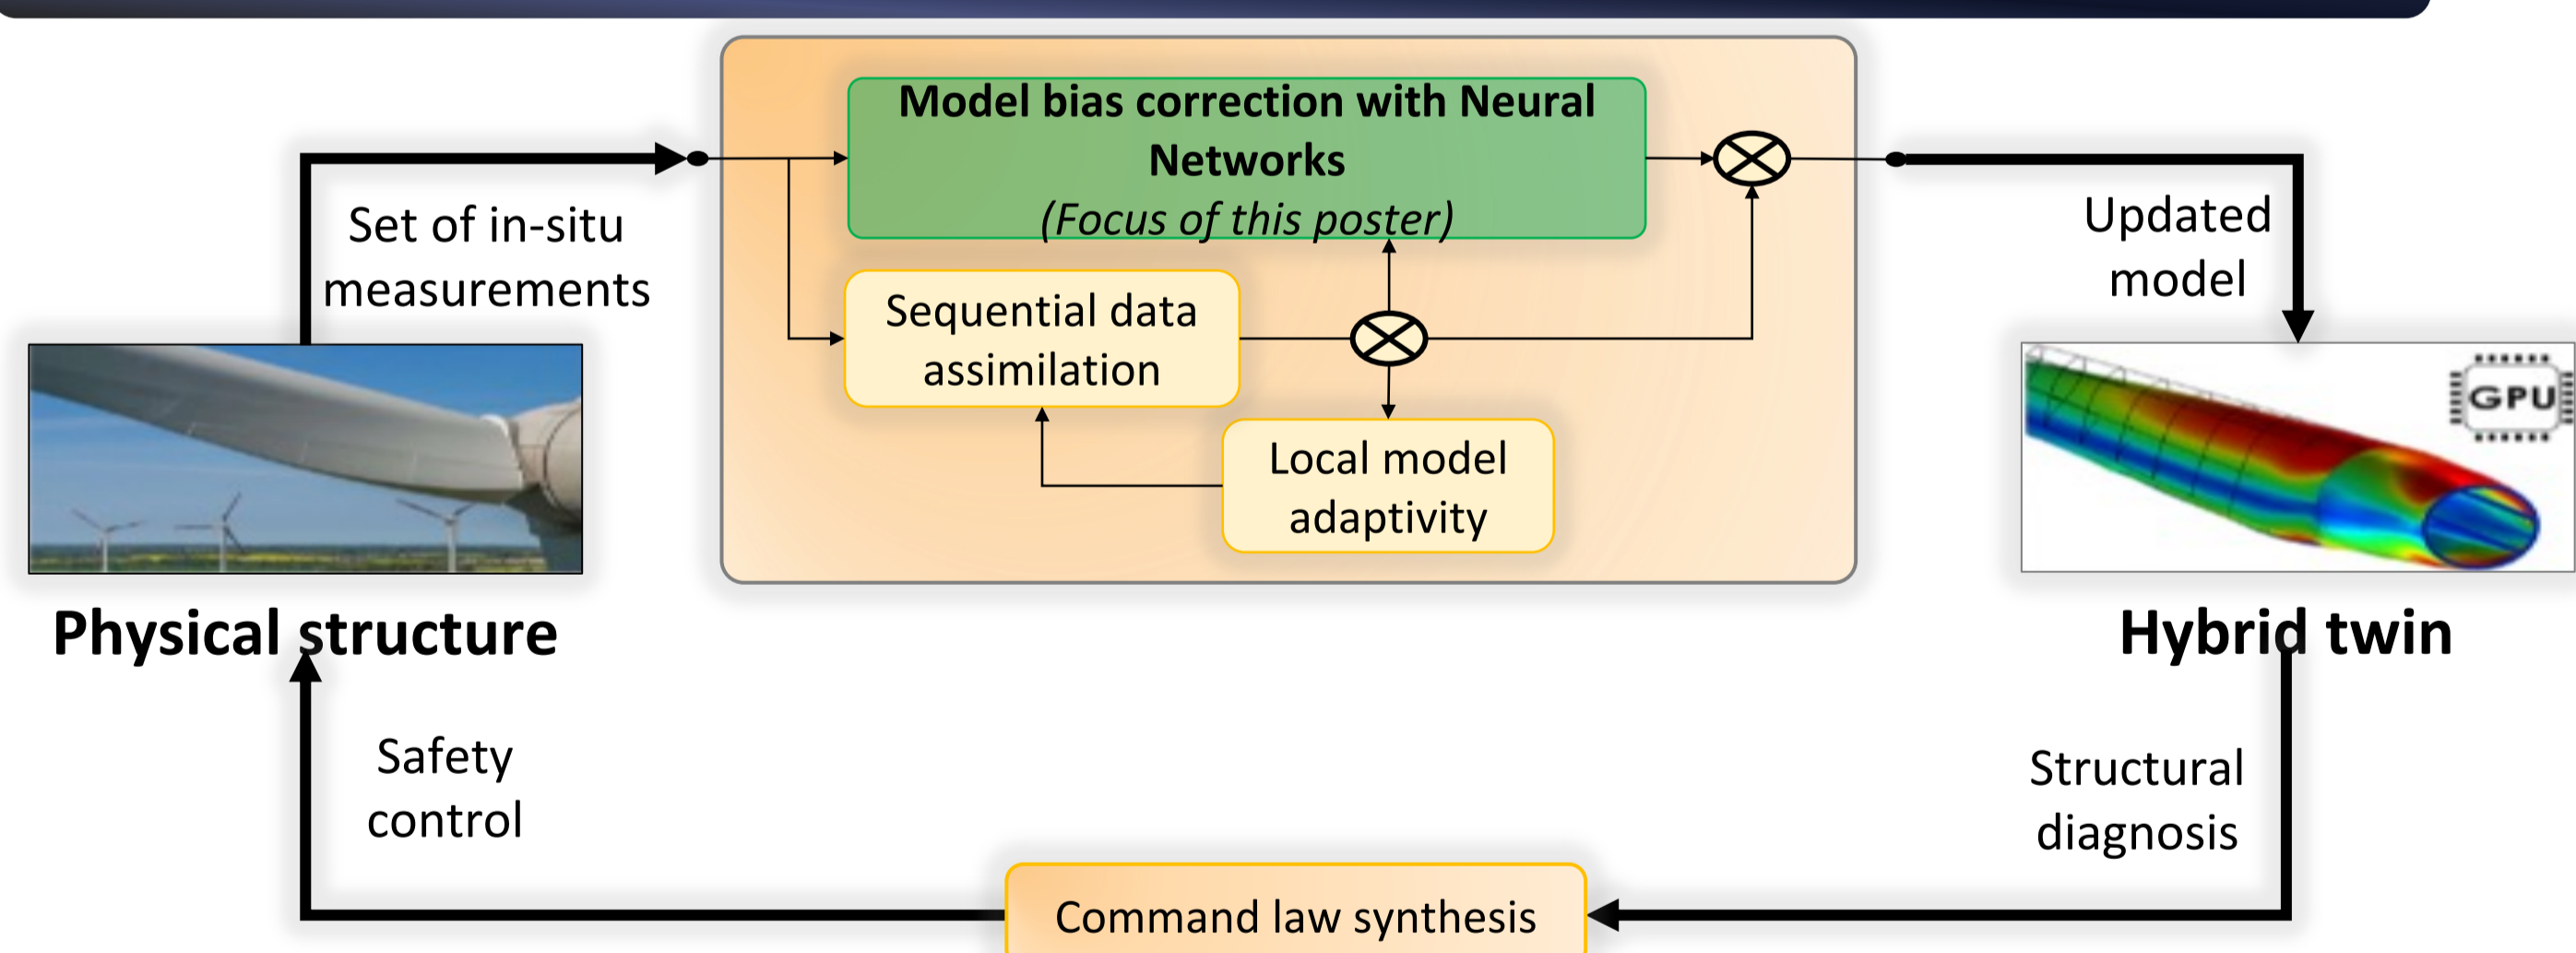

NN II extracts a reduced manifold from the local state

NN III predicts the time evolution of the latent vector

NN IV maps local displacements to interface forces

Learning of complex constitutive models

$$\mathbf{p}_{opt} = \underset{\mathbf{p} \in \mathcal{P}}{\operatorname{argmin}} \left[\min_{\hat{s} \in \mathcal{A}_d} \left[\mathcal{E}_{CRE}^2(\hat{s}) + \frac{\alpha}{2} \int_0^T \|\Pi \mathbf{u} - \mathbf{u}_{obs}\|^2 \right] \right]$$

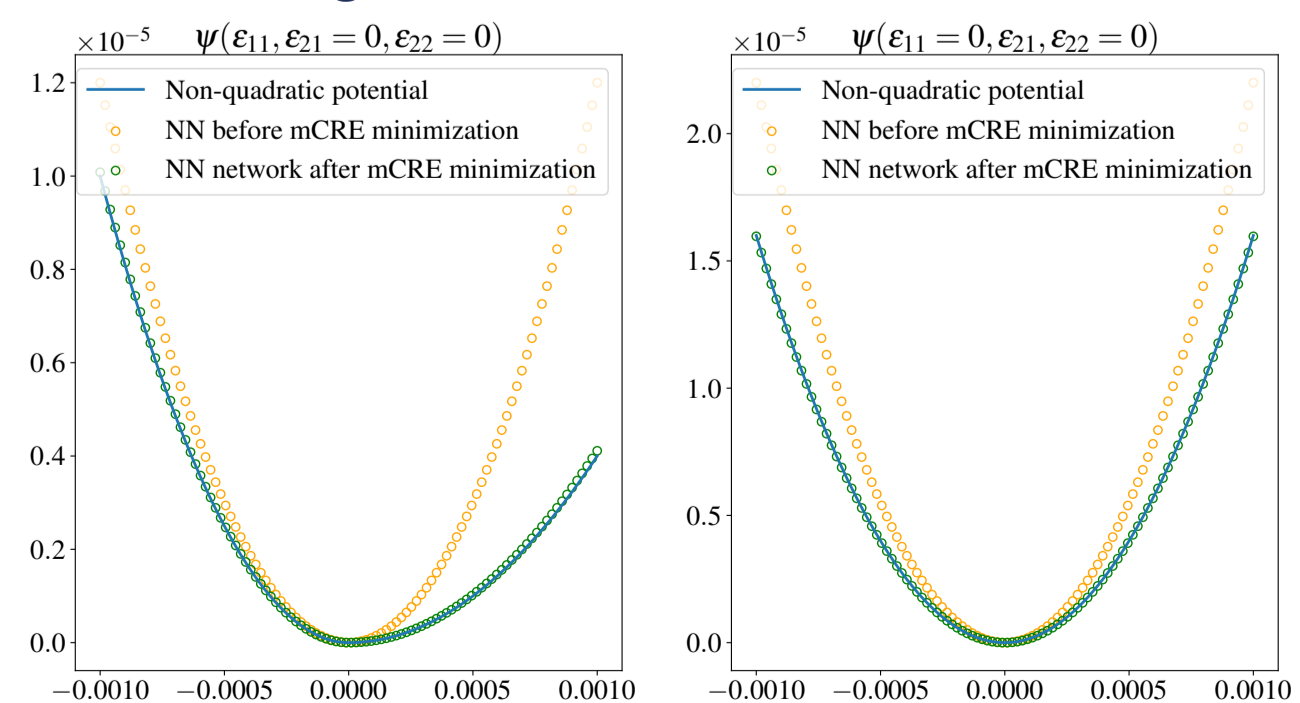

Weights and biases of the neural network

Space of parameters defined such that physical requirements are satisfied

Static and kinematic admissibility guaranteed

ALL RELIABLE INFORMATION GUARANTEED BY CONSTRUCTION

Model bias indicator based on the residual of Legendre-Fenchel transform

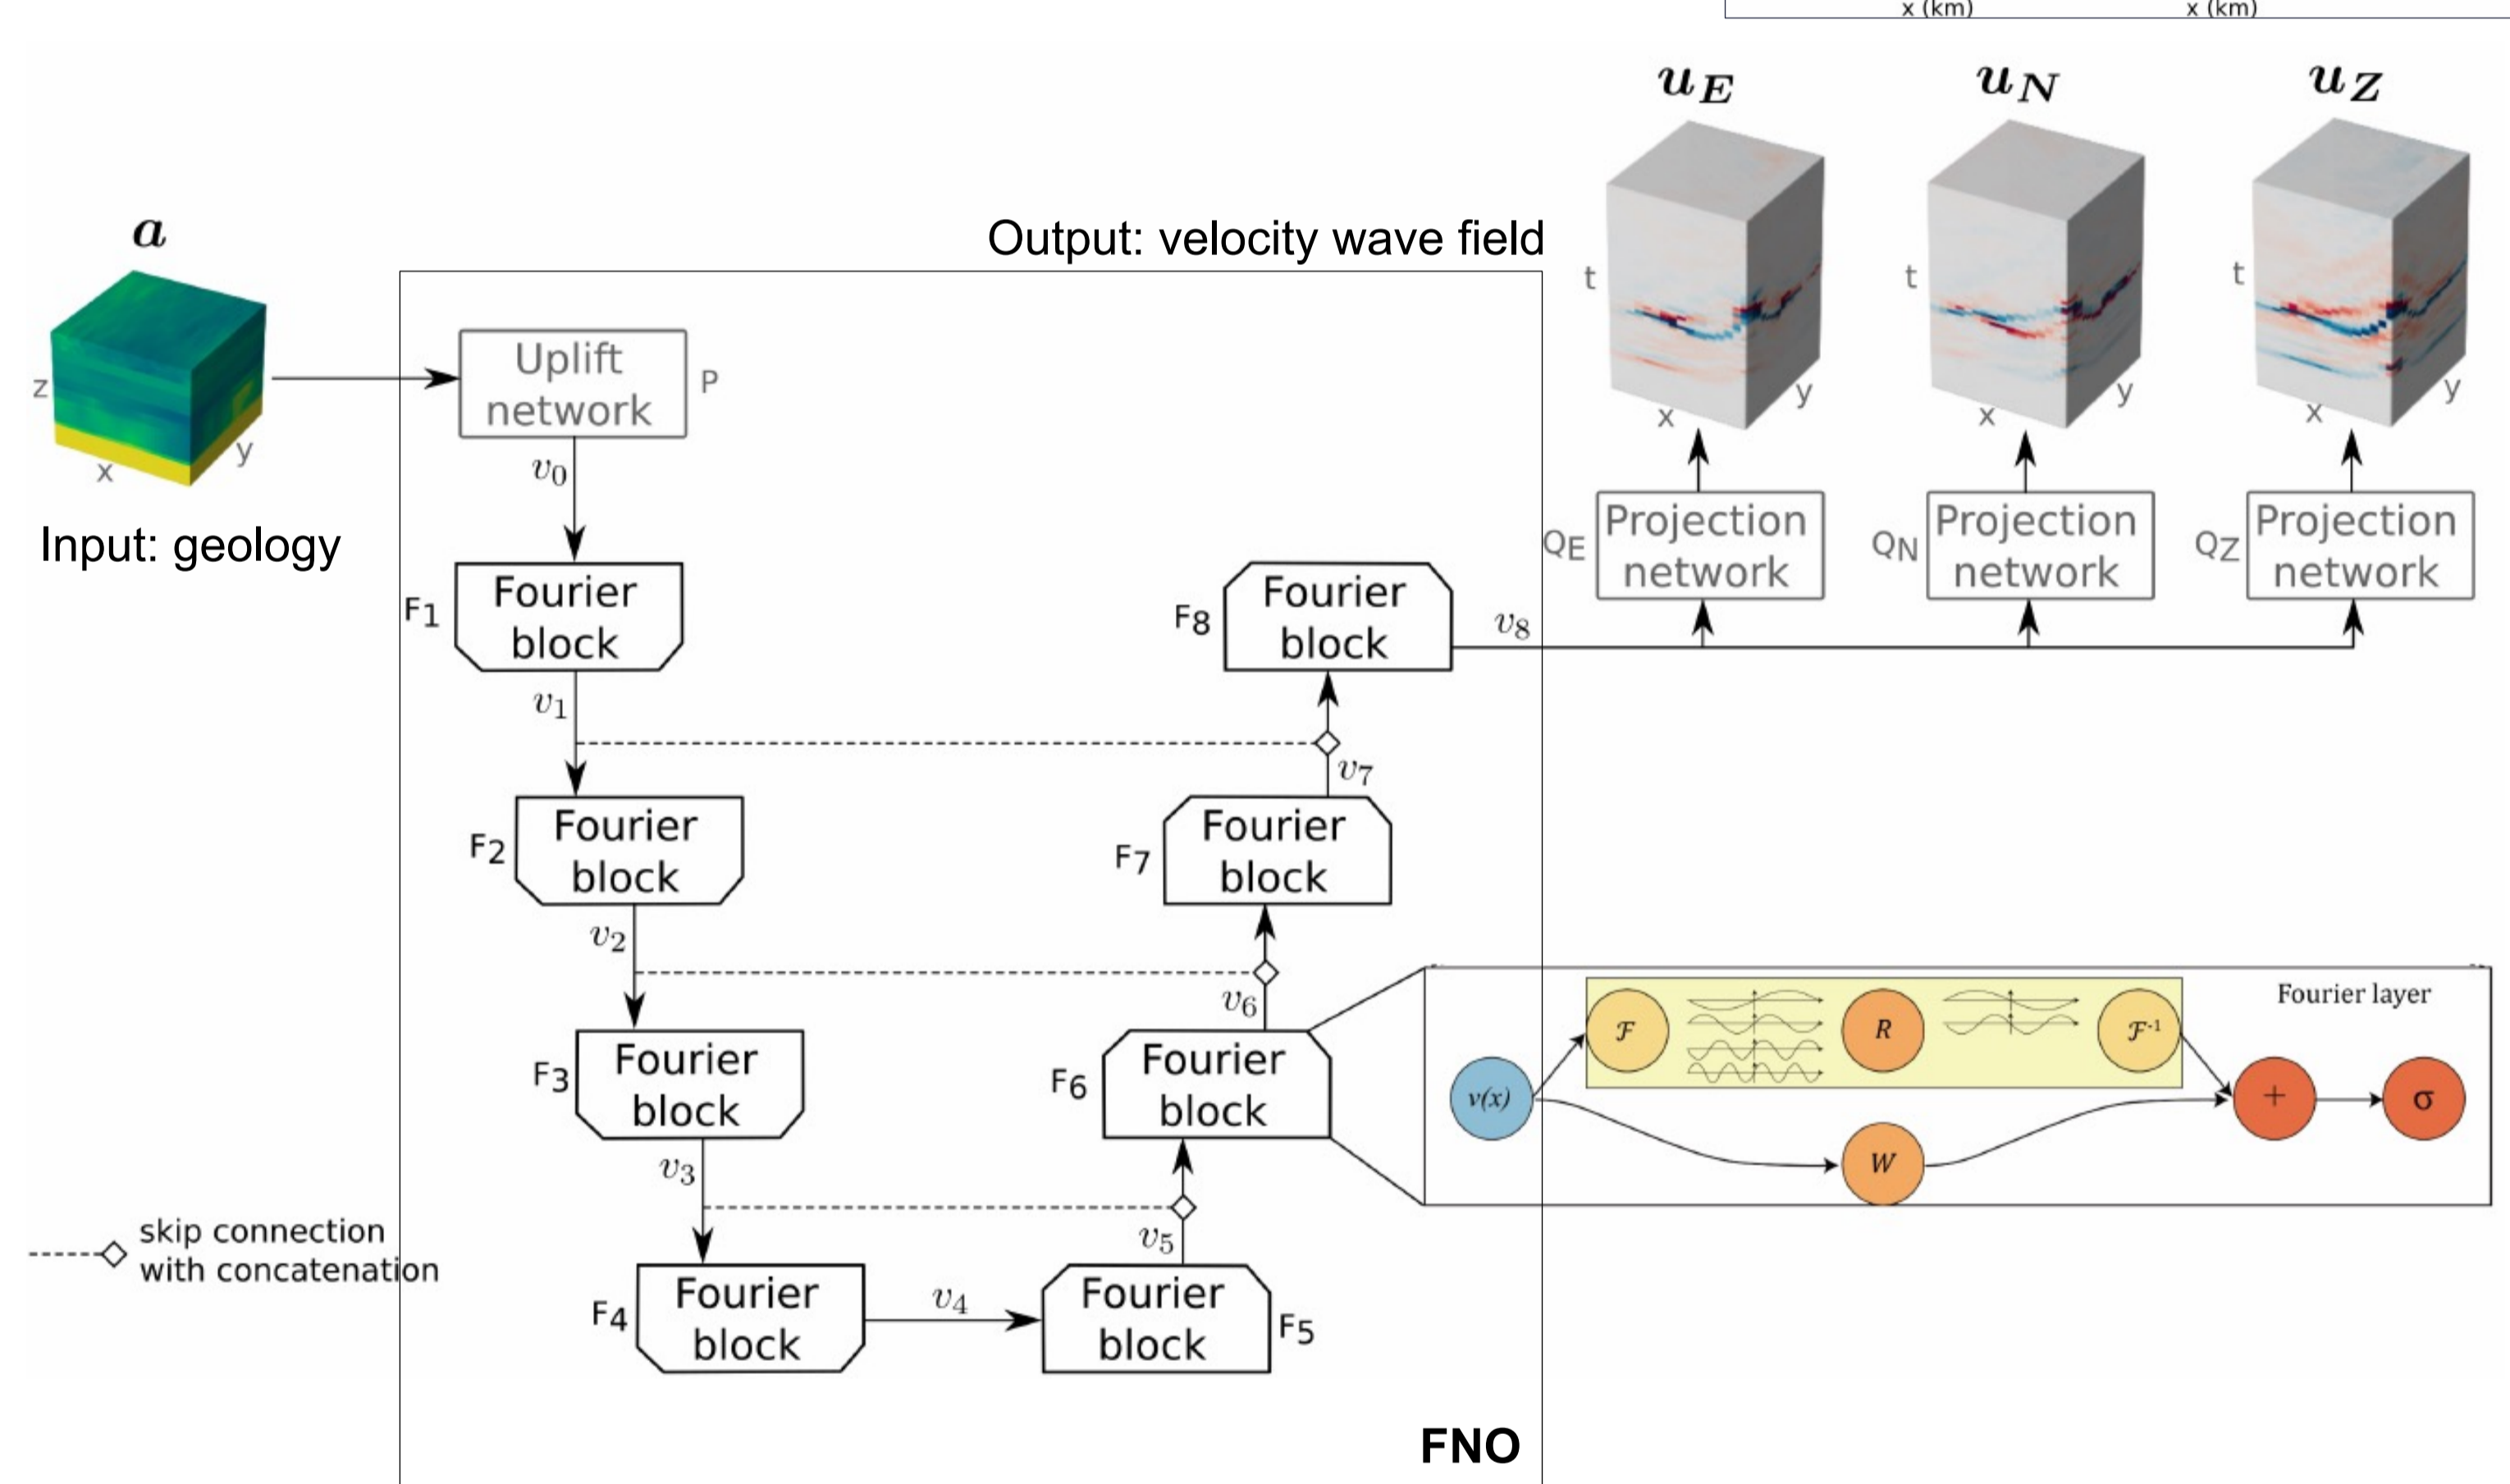

- Learning state equations & evolution laws
- Thermodynamically consistent strategy
- Convexity of potentials enforced with ICNNs
- Approach very robust to noisy data
- Automatic tuning of hyper-parameters

Fourier neural operator for 3D wave propagation

TRAINING
