

Theme 3: Addressing past tools/kits to reconstruct social dynamics

# Domestic, artisanal, and ritual activities in a classical Maya city.

*Functional analysis of obsidian blades from the Cancuén site (AD 650-800)*

Naya Cadalen, Chloé Andrieu and Sylvie Beyries

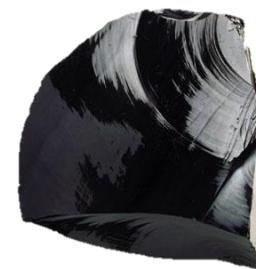

## Classic period: AD 250-900/1000

Raw products

Finished goods

Who are the artisans?

Where are the workshops?

What was the value of their activities?

## Cancuén (Petén department, Guatemala) : AD 650-800

An architectural feature: a waste dump associated with each of the structures

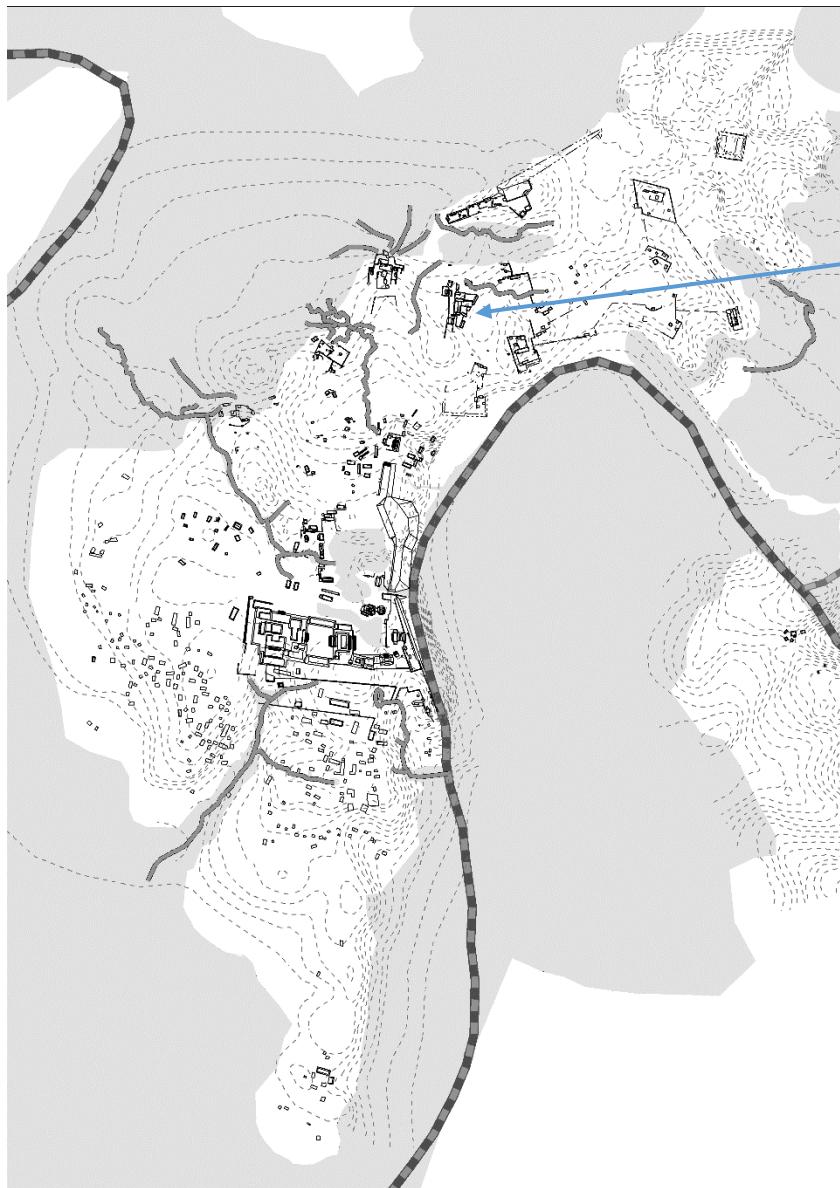

Cancuén's Ballcourt

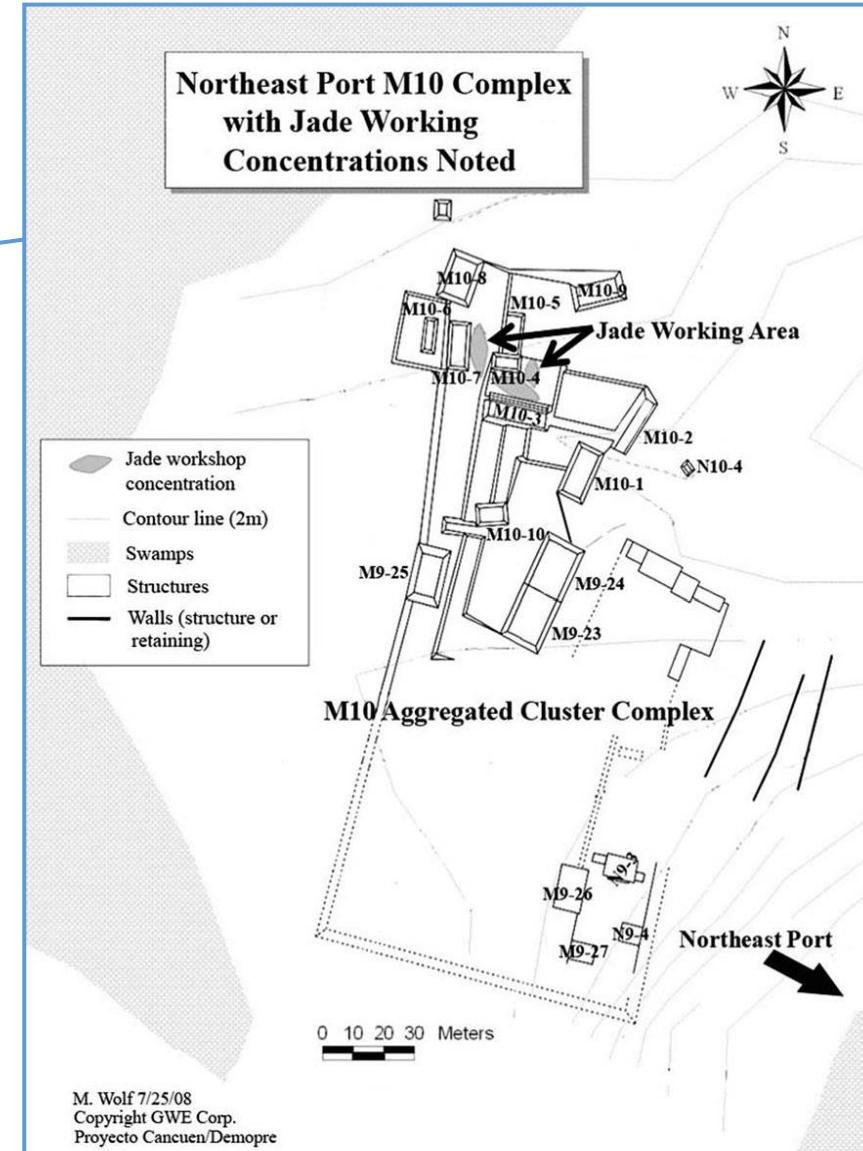

Massacre of elite populations

Bishop Diego de Landa

“Metían con que cortarse o sacarse sangre de las orejas y la herramienta para labrar los negros dioses y con estos aderezos se encerraban en la casilla los chaces, el sacerdote y el oficial y comenzaban su labor de dioses cortándose a menudo las orejas y untando con la sangre aquellos demonios y quemándoles su incienso y así perseveraban hasta acabar, dándoles (entonces) de comer”

Diego de Landa, 1566

Proyecto de Cancuén ©

Kan Ma'ax, the last king of Cancuén, was burried with more tan 1 200 pre-formed fragments and 52 obsidian nuclei

The action of producing certain goods was the object of great social and religious standing

### Functional analysis:

An analytical tool which is still little exploited in the study of the ancient Maya

### It is possible:

- To highlight activities involving perishable materials
  - To discuss the value of these craft activities

By developing this approach, it will be possible to expand our understanding of the activities of the Maya cities and the socio-economic organization

**THANKS FOR YOU ATTENTION !!**
