Home / Health topics / One Health

One Health is an integrated, unifying approach that aims to sustainably balance and optimize the health of people, animals and ecosystems.

It recognizes that the health of humans, domestic and wild animals, plants, and the wider environment (including ecosystems) are closely linked and interdependent.

## One health

### Overview

While health, food, water, energy and environment are all wider topics with sector-specific concerns, the collaboration across sectors and disciplines contributes to protect health, address health challenges such as the emergence of infectious diseases, antimicrobial resistance, and food safety and promote the health and integrity of our ecosystems.

By linking humans, animals and the environment, One Health can help to address the full spectrum of disease control – from prevention to detection, preparedness, response and management – and contribute to global health security.

# Zoonoses

29 juillet 2020

## Principaux faits

- Une zoonose est une maladie ou une infection naturellement transmissible des animaux vertébrés à l'homme.
- Il existe plus de 200 types connus de zoonoses.
- Les zoonoses représentent un pourcentage important des maladies nouvelles et existantes chez l'homme.
- Certaines zoonoses, comme la rage, sont totalement évitables par la vaccination ou par d'autres méthodes.

Une zoonose est une maladie infectieuse qui est passée de l'animal à l'homme. Les agents pathogènes zoonotiques peuvent être d'origine bactérienne, virale ou parasitaire, ou peuvent impliquer des agents non conventionnels et se propager à l'homme par contact direct ou par les aliments, l'eau ou l'environnement. Ils représentent un problème majeur de santé publique dans le monde entier en raison de notre relation étroite avec les animaux dans différents contextes (agriculture, animaux domestique et environnement naturel). Les zoonoses peuvent également perturber la production et le commerce des produits d'origine animale pour l'alimentation ou à d'autres fins.

Les zoonoses représentent une forte proportion de l'ensemble des maladies

## About One Health Day

One Health Day is an international campaign co-coordinated by the [One Health Commission](#), the [One Health Initiative Autonomous pro bono Team](#) and the One Health Platform Foundation. The goal of One Health Day is to bring attention around the world to the need for One Health interactions and for the world to 'see them in action'.

*For more information about One Health Day, visit [here](#) or email your [Regional Contact](#).*

## Présentation

Le DIM 1HEALTH se fonde sur la triade santé environnementale, santé humaine et santé animale, domaines indissociables compte tenu de leurs étroites interactions. Le concept « une seule santé » a en effet émergé dans un contexte de changement climatique, de croissance démographique à l'échelle mondiale, de raréfaction des ressources naturelles, de pression sanitaire mouvante, dans la population humaine comme dans les populations animales.

Ce projet scientifique cible les actions impliquées dans la chaîne « dépistage-surveillance-traitement-prévention-prédiction », tout en prenant en compte la demande sociétale. Il vise à croiser les recherches entre acteurs d'institutions différentes, et à conduire à des améliorations

# Hepatitis E virus infection in human

Every year :      20 million hepatitis E infections  
                      3 million symptomatic cases  
                      56 600 hepatitis E-related deaths.

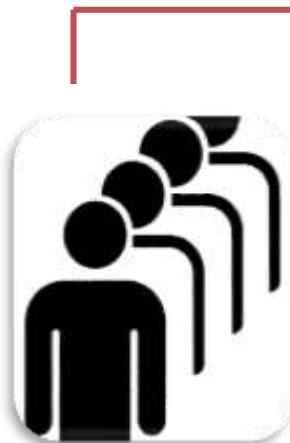

- **Incubation time**      40 days (2-9 weeks)
- **Acute Hepatitis**      Enteric transmission (similar to hepatitis A), blood transfusion
- **Fulminate Hepatitis**      1%-4%. Pregnant women: 15%-25%
- **Chronic Hepatitis**      Immuno-suppression (solid organ transplant recipient) RNA+> 6 Mo
- **Neurologic syndroms**      Guillain-Barré, Parsonage-Turner (CSF+ chronic infection)
- **Extra-hepatic**      Kidney dysfunction, pancreatitis
- **Hepatocellular carcinoma** (Amougou Atsama, 2017; Borentain P et al 2017)

# Hepatitis E epidemiology

Endemic Regions: large epidemics  
Tropical, subtropical

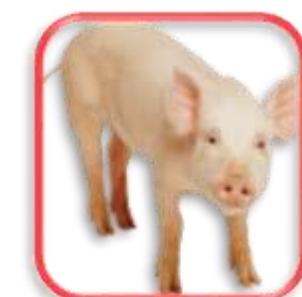

Water, spoiled foods

**HEV-1, HEV-2**

Autochthonous sporadic or small outbreaks: ZOONOSIS  
Europe, Japan, USA

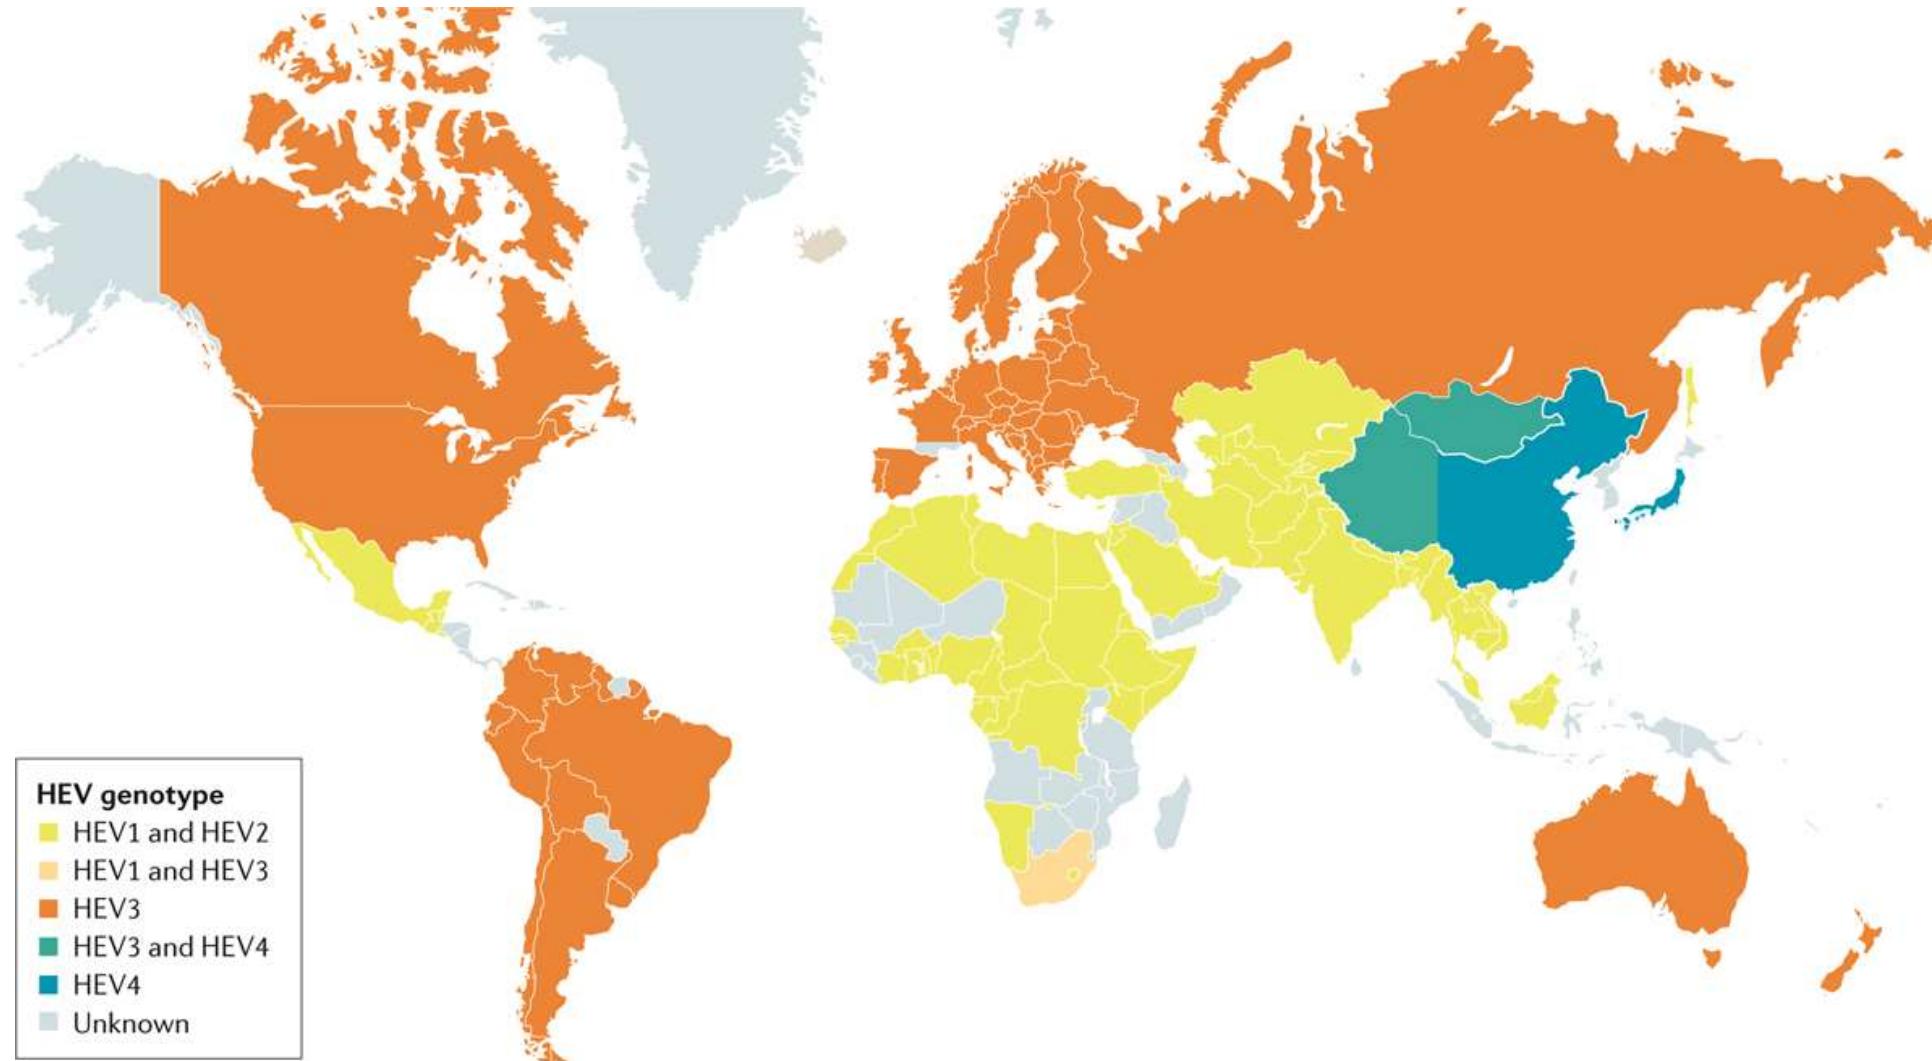

Undercooked meat, contact

**HEV-3, HEV-4**

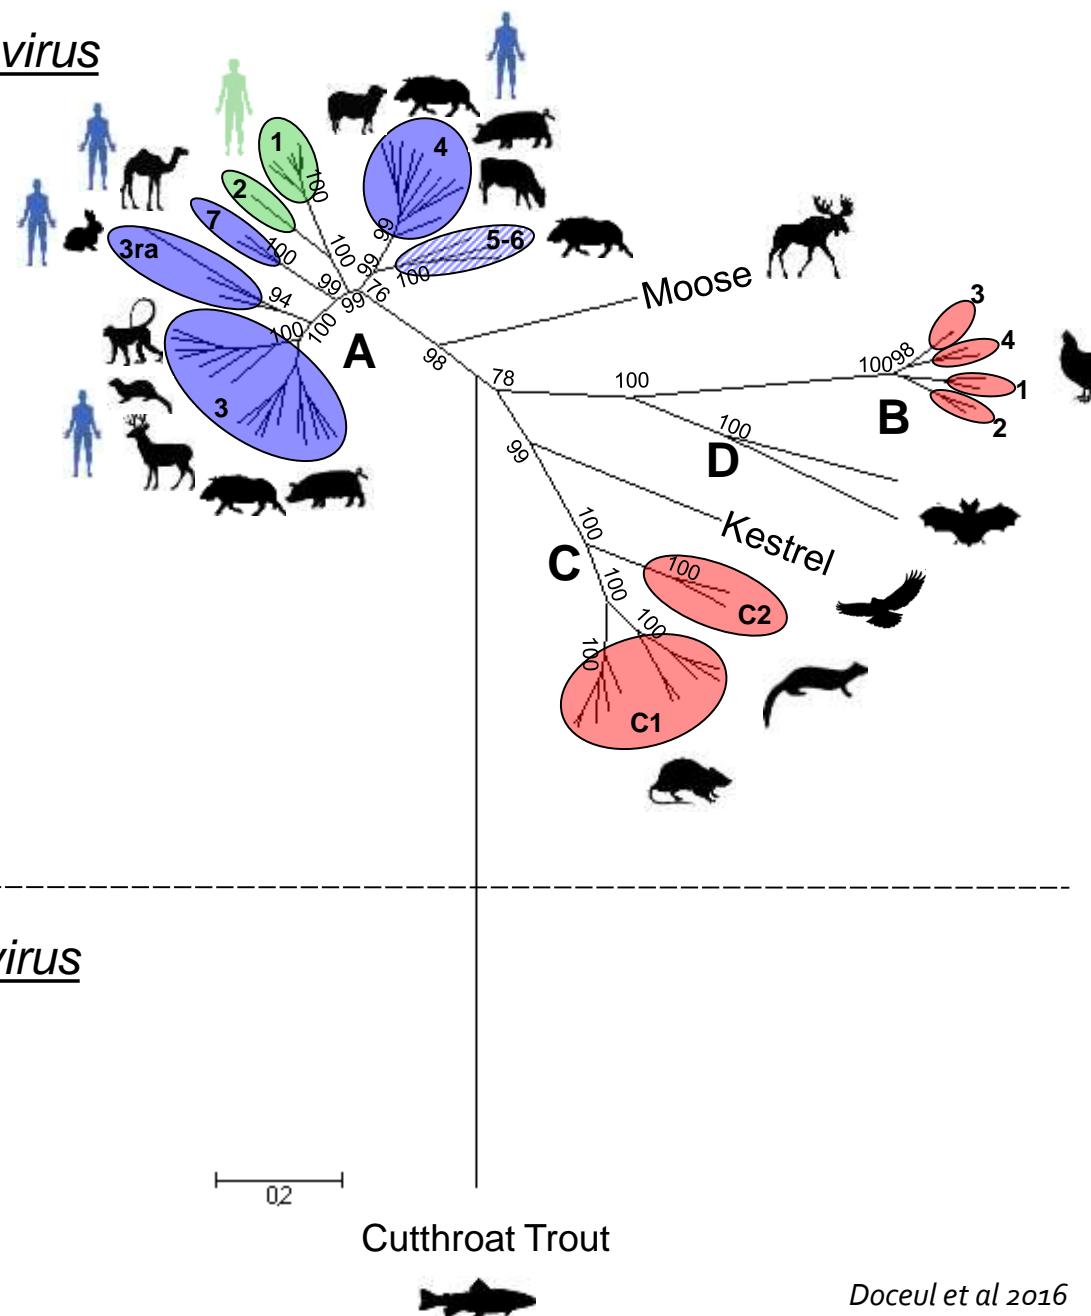

# Worldwide presence of HEV

Kamar, N. et al. (2017) Hepatitis E virus infection *Nat. Rev. Dis. Primers* doi:10.1038/nrdp.2017.86

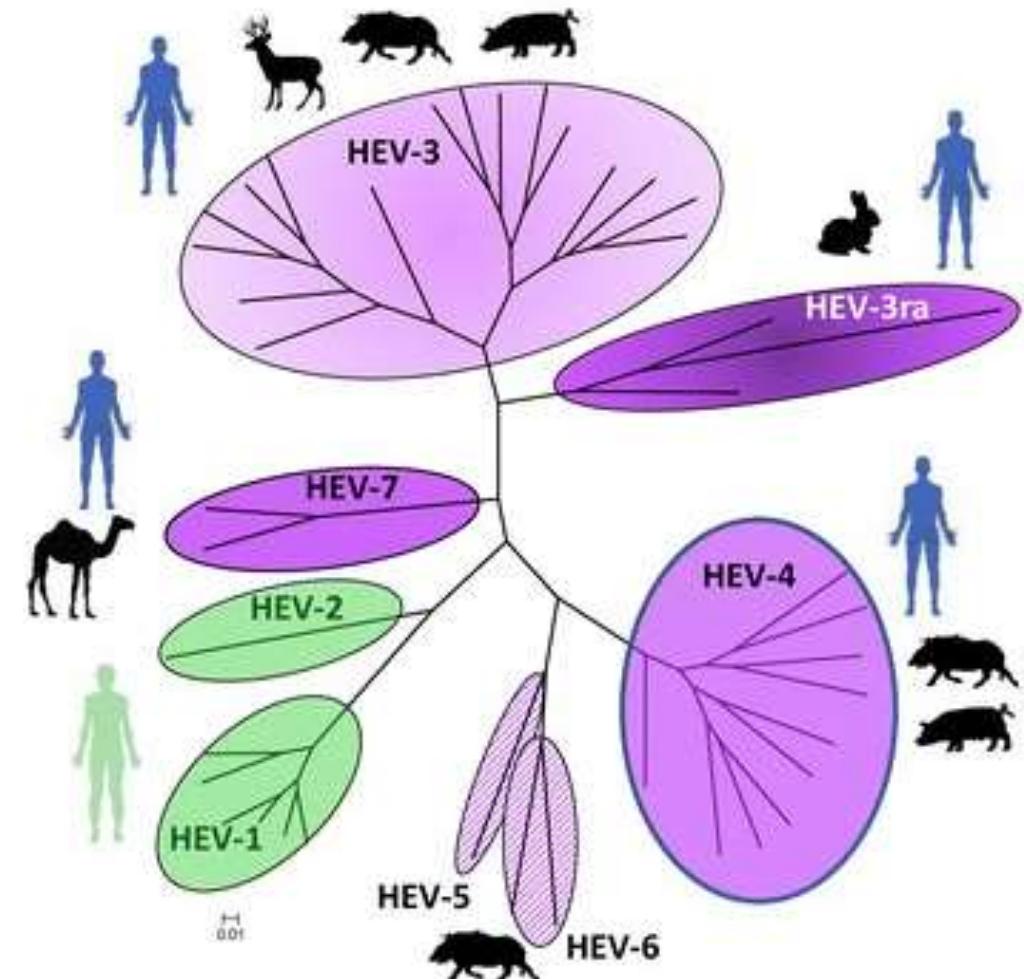

# Hepeviridae Family

## Orthohepevirus

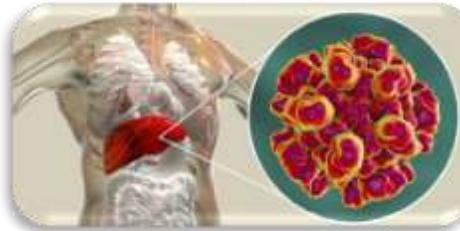

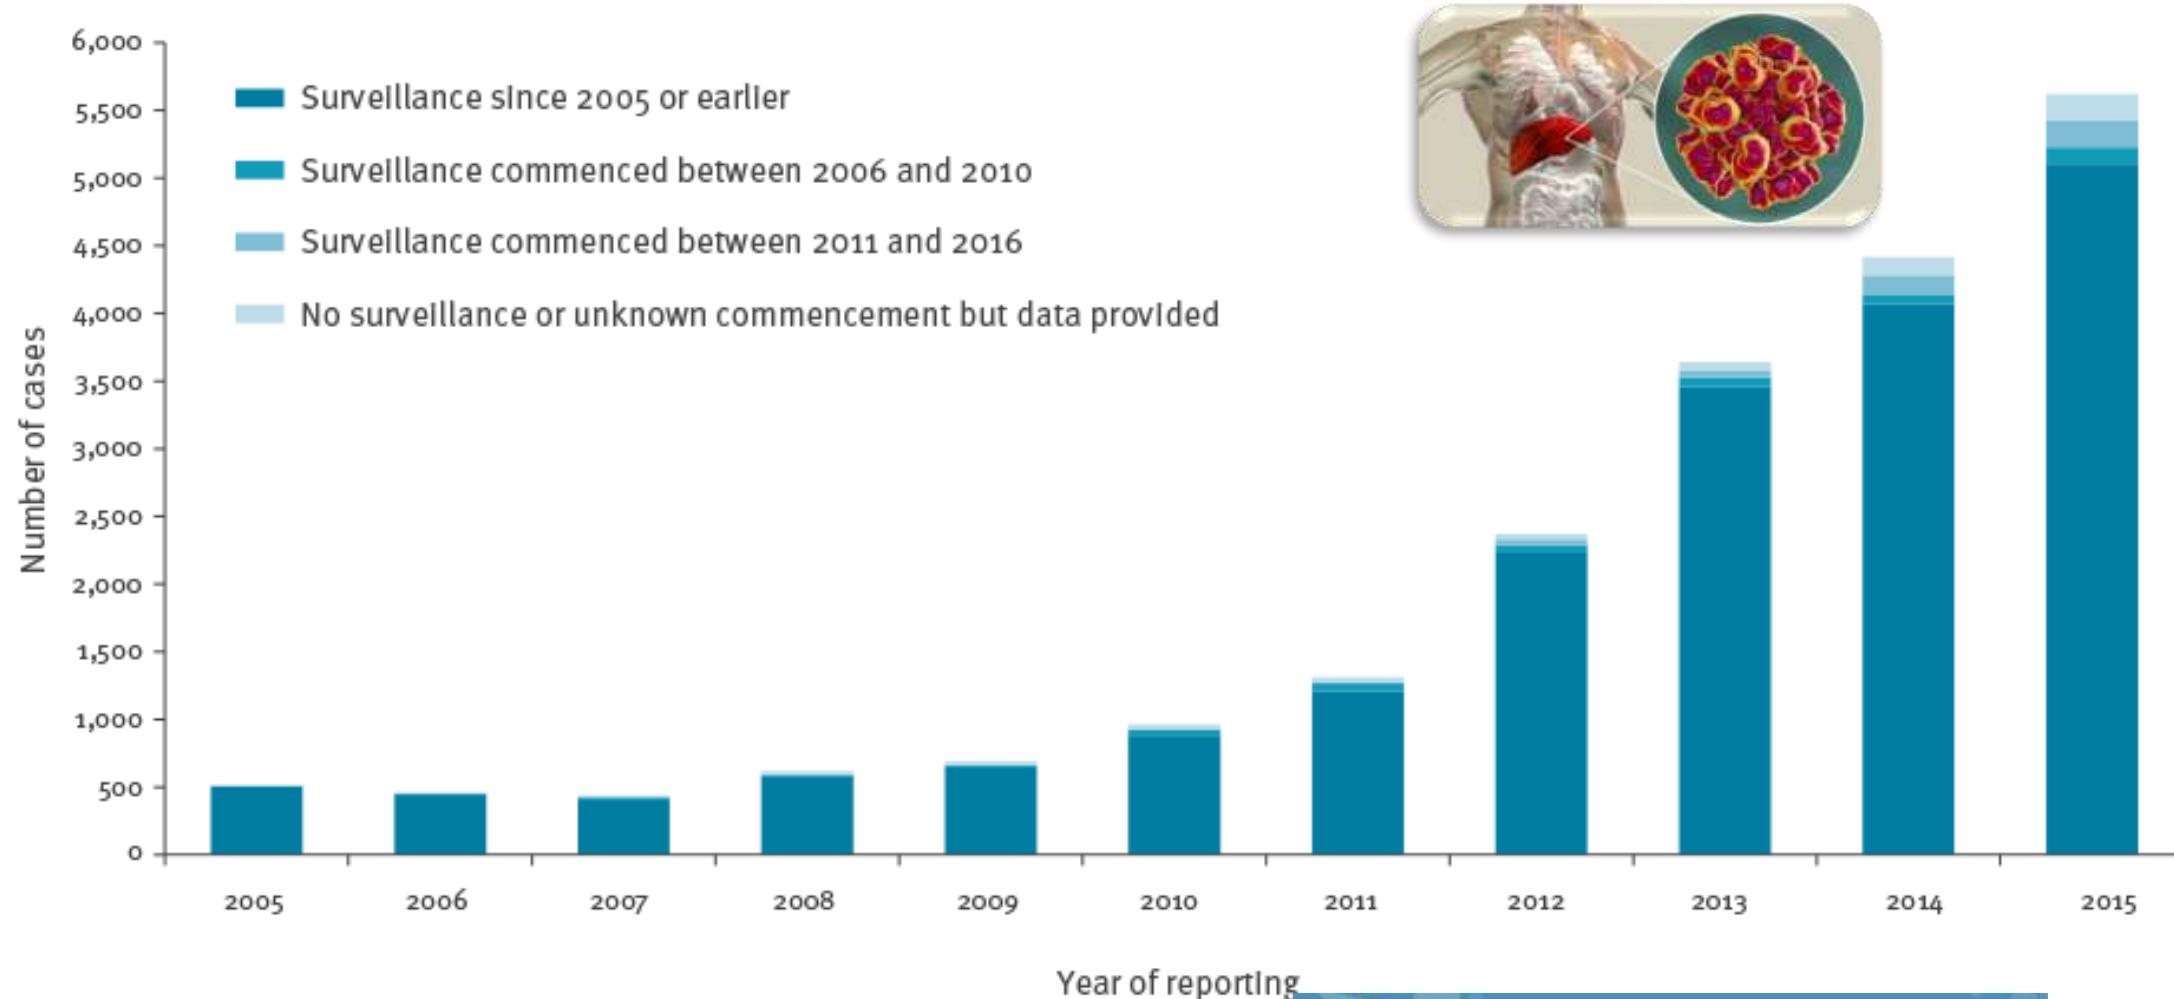

## Paslahepevirus

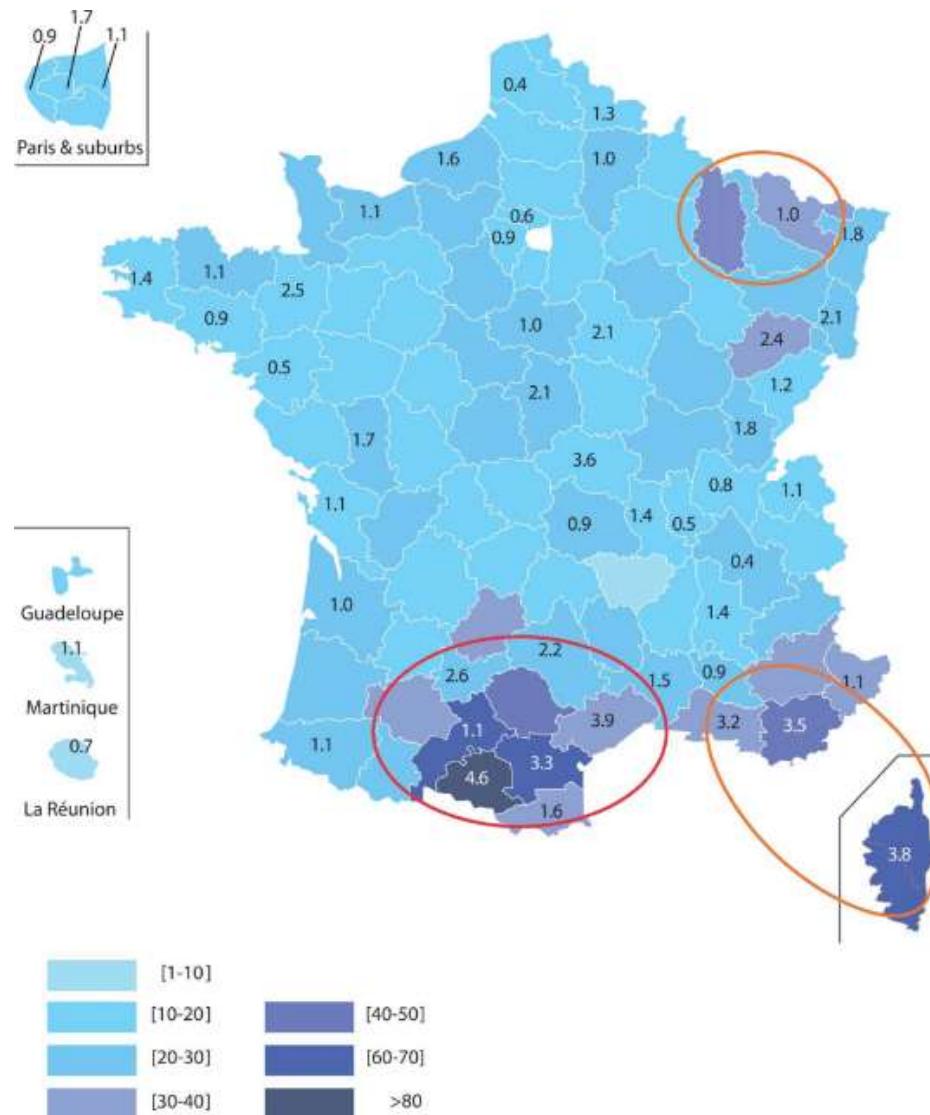

## Piscihepevirus

# HEV EPIDEMIOLOGY IN HUMANS

Reported number of cases of hepatitis E virus infection by year of notification and year of surveillance commencement, 22 European Union/European Economic Area (EU/EEA) countries, 2005–2015

# HEV seroprevalence French population: 22,4%

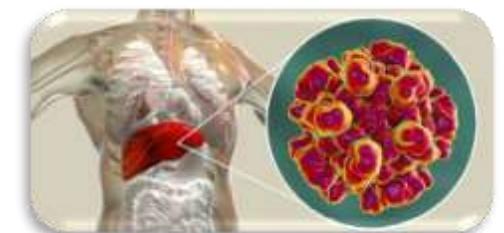

- ✓ Zoonotic HEV infection is an emerging health problem in France

- 9 cases recorded in 2002 vs **2292 in 2019 (CNR HEV)**
- Seroprevalence: 22,4% (*Mansuy et al, 2016*)

- ✓ Haute Loire : 8%

- ✓ 3 hyperendemic regions:

- Ariège : 86,4%
- Corse >60%
- Northeast

- Prevalence RNA in blood donation: 1/2848 (Gallian et al, 2014)

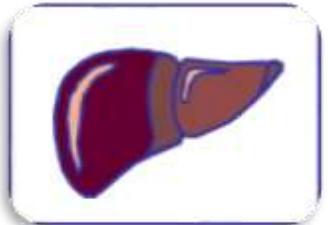

- Estimations:

- ✓ **60,000 acute cases/year**
- ✓ **500 hospitalization**
- ✓ **20 deaths**
- ✓ **75% foodborne**

*Van Cauteren et al, 2018*

# Sources/vehicles of HEV-3 and HEV-4: infected meat/food products

## ✓ Pork Liver contaminated with HEV : grocery stores, slaughterhouse

Europe, North America, Japan: 1.9% to **12,7%**

## ✓ Pork liver sausages contaminated with HEV

France ( <i>Pavio et al 2014</i> )	30% (confirmed cases HEV-3)
Germany ( <i>Szabo et al et al 2015</i> )	22%
Italy ( <i>Di Bartolo et al 2014</i> )	24%
Switzerland ( <i>Moor et al 2018</i> )	19%
The Netherland ( <i>Boxman, et al 2019</i> )	<b>70%</b>

## ✓ Pork sausages

UK ( <i>Berto et al 2012</i> )	10%
Germany ( <i>Szabo et al 2015</i> )	20%
Switzerland ( <i>Moor et al 2018</i> )	6%

# Sources/vehicles of HEV-3 and HEV-4: contact/environment

- ★ Swine Slurry
- ★ Slaughterhouse

- ❖ Personnel (hands), surfaces, utensiles (knife, hook), effluents, transportation vehicles

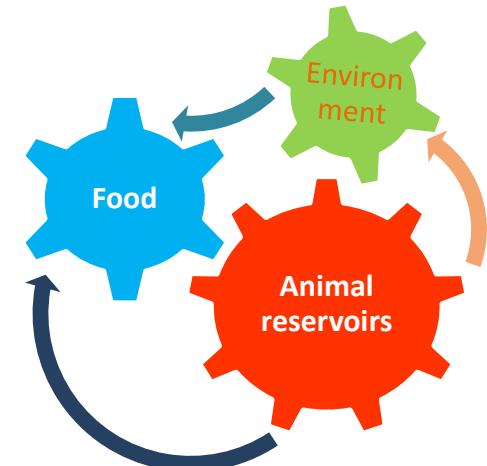

## ★ Waste Water Treatment Plant (Europe)

## ★ Surface water in non endemic region (The Netherlands)

## ★ Shell fish

- ❖ Corbicula Japonica, Japan
- ❖ Outbreak on Cruise Ship (Oyster HEV-3)
- ❖ Mussels up to 92% HEV RNA (UK)
- ❖ Bioaccumulation in Oyster

## ★ Soft fruits (strawberries and other berries)

## ★ Green leafy salads

## ★ Herb and Spices
