Spatial Ontology and Typology

## Outline

1. Methodology and data
a. SpOTy Project
b. Burmese data
2. Burmese morphosyntactic devices used to express Goal and Source grounds
3. The Asymmetry hypothesis in Goal and Source expressions
4. Asymmetry in Burmese

## 1. Methodology and data SpOTy Project

- Projet SpOTy (Spatial Ontology and Typology, Labex ASLAN, Université de Lyon, 2020-2024)
- Aim of the project:
- Typology of Motion expression
- Ontology of spatial relations (cross-connected network)
- Web application: incremental database and SPARQL/Sparnatural query tool
- Database:
- 67 languages ( 20 phyla)
- Genetically, geographically, and typologically diverse
- However: sample is not balanced

Spatial Ontology and Typology

## 1. Methodology and data Data collected

- For this presentation specifically:
- Central Burma variety of Burmese
- Collected in Yangon (Burma) between 2008 and 2010
- Video stimulus Trajectoire, designed to elicit descriptions of motion events (Ishibashi et al. 2006, Vuillermet \& Kopecka 2019), but also Frog Story (Mayer 1969) and narratives

Trajectoire: Woman runs away from tree coming

Trajectoire: Woman exits cave ascends stairs going_away

## Outline

## 1. Methodology and data

2. Burmese morphosyntactic devices used to express Goal and Source grounds
a. About the Burmese language
b. Spontaneous motion event in Burmese
3. The Asymmetry hypothesis in Goal and Source expressions
4. Asymmetry in Burmese

## 2. Burmese Morphosyntactic devices used to express Goal and Source grounds About the Burmese language

- National language of Myanmar (Burma). Native language of $2 / 3$ of the population ( $\pm 35 \mathrm{M}$ )
- Phonological features (cf. MSEA languages): complex vowel system, tone system, restricted set of final consonants
- Tendency to monosyllabicity, non-inflectional language (analytic), widespread compounding
- Optionality (pragmatically-driven) of many grammatical categories (grammatical tense, personal marking...)
- (SO)V language, postpositions

pyiN ${ }^{2} \quad \mathrm{pe}^{3} \quad$ laiß $=m \varepsilon^{2}$
$\mathrm{V}_{\mathrm{H}}$ : fix $\quad \mathrm{V}_{\text {AUx }}$ :BENEF ASP:terminative=IRR
'(I) will fix (it) for (you)....'

## 2. Burmese Morphosyntactic devices used to express Goal and Source grounds

## About the Burmese language

- Grammatical features
- ...
- (SO)V language, postpositions
- Serial verb constructions (SVC)
 də.mya ${ }^{1}$-twe ${ }^{2}$ Өəna? =nc ${ }^{1} \quad$ pip $\quad$ pye $^{3}=t \varepsilon^{2}$ bandit -PL gun =with shoot, throw run =REAL 'The bandits shot with their guns and ran.'
- 'Directional' SVC $\Leftrightarrow$ includes at least one path verb

| kao ${ }^{2} \mathrm{ma}^{2} \mathrm{le}^{3}$ | $\mathrm{gu}^{2}$ | $t^{\text {h }} \varepsilon^{3}$ | $=k a^{1} . n e^{2}$ | $t^{\text {h }} \mathbf{w}$ ¢? | $\theta w a^{3}$ | $=t \varepsilon^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| young.woman | cave | interior | =ABL | go.out | go/cFG | REAL |

'A young lady goes out from the cave [away from the deictic center].'

## 2. Burmese Morphosyntactic devices used to express Goal and Source grounds Spontaneous motion event in Burmese

- Spontaneous Motion : "Spontaneous motion refers to an event that semantically encode a figure (F) moving (path) from a ground (Source) to another ground (Goal) in a certain manner (manner/ caused)" (Talmy 1972:1, also 2000)
- Burmese Ground expression in spontaneous motion events:
- Bare noun (no post-positiion, no relator noun)
- Noun and postposition
- Noun and relator noun
- Noun and both relator noun and postposition

## 2. Burmese Morphosyntactic devices used to express Goal and Source grounds <br> Spontaneous motion event in Burmese

- Burmese postpositions:

 $\operatorname{piN}^{2} \mid \varepsilon^{2}-k a N^{3}-\mathrm{ce}^{2}=k a^{11} \quad \mathrm{gu}^{2} \quad \mathrm{t}^{\mathrm{h}} \varepsilon^{3}=k o^{2} \quad \mathrm{wiN}^{2} \quad \theta \mathrm{wa}^{3}=t \varepsilon^{2}$
sea-shore-origin=ABL cave interior=ALL enter go=REAL
'(She) went into the cave from the sea shore [away form the deictic center].'

## 2．Burmese Morphosyntactic devices used to express Goal and Source grounds Spontaneous motion event in Burmese

－Burmese Relator Noun（RN）：
$>$ Configurational information about the Ground，topological features
$>9$ RNs found in our data

Table 1b：
Burmese Relator Nouns
found in motion events

| Relator nouns |  |  |
| :---: | :---: | :---: |
| $0{ }^{\circ}$ | $\mathrm{t}^{\text {h }} \varepsilon^{3}$ | interior |
| करण | pJ ${ }^{2}$ | top |
| бъวை์ | Paכ？ | bottom |
| 6 ช（Øर์。） | $c^{\text {h }} \mathrm{e}^{2}\left(\mathrm{yiN}^{3}\right)$ | foot，origin |
| ๑0 | $s^{\text {h }}{ }^{2}$ | place，in presence of |
| つर्ष | b ¢？ | direction |
| 6ทิ。 | Se ${ }^{1}$ | front |
| $0{ }^{0}$ | sa？ | edge |
| 65\％ | $\mathrm{be}^{3}$ | side |

## Outline

Spatial Ontology and Typology

## 1. Methodology and data

2. Burmese morphosyntactic devices used to express Goal and Source grounds
3. The Asymmetry hypothesis in Goal and Source expressions
a. Cognitive hypothesis
b. Linguistic realization of the asymmetry
4. (A)symmetry in Burmese

## 3. The Asymmetry hypothesis between the expressions of Source and Goal and its linguistic realization <br> Cognitive Hypothesis

- Differences and similarities in verbalization between the starting point (Source) and the endpoint (Goal) when describing a path followed by a Figure
- The Goal is cognitively more prominent (more salient)
- The Goal is favored over the expression of the Source in the descriptions of motion events
(Ikegami 1987, Bourdin 1997, Kopecka \& Ishibashi 2011, Kopecka \& Vuillermet 2021)

## 3. The Asymmetry hypothesis between the expressions of Source and Goal and its linguistic realization <br> Linguistic realization of the asymmetry

## (A) Semantic Asymmetry

- Conflation : tendendy to encode Goal (allative) and Location (essive/locative) in the same morpheme. Conflation of Location and Source is rare.
(Creissels 2008)

Catalan :
LOC-ALL conflation
(Creissels 2006: 20)
(5) a. Els hem trobat / enviat a la botiga O3PL AUX.S1PL find / send LOC/ALL DEF.F.SG shop 'We found / sent them at / to the shop'
b. Vénen de la botiga come.S3PL ABL DEF.F.SG shop
'They are coming from the shop'

## 3. The Asymmetry hypothesis between the expressions of Source and Goal and its linguistic realization <br> Linguistic realization of the asymmetry

## (A) Semantic Asymmetry

- Greater semantic granularity: more morphemes for Goal-encoding than Source-encoding. (Bourdin 1997:190)

Table 2: Motionencoding prepositions in Central Thai

| \# of forms | Forms | Orientation |
| :---: | :---: | :---: |
| 6 | ยัง jan / สู่ sù: / ถึง thǔn / หา hǎ: ทาง $t^{\text {h }} a: \eta$ / จนถึง con. $t^{\text {h }}$ /ǔท | Allative, different meaning (to, up to, towards) and uses (places, objects, people) |
| 2 | จาก cà:k / แต่ tદ̀: | Source |

## 3. The Asymmetry hypothesis between the expressions of Source and Goal and its linguistic realization <br> Linguistic realization of the asymmetry

## (B)Marphosyntactic asymmetry

- Goals markers are morphologically less complex (Kopecka \& Vuillermet 2021:10)

French: complexity of
Source markers
(Creissels 2006: 22)
(6) a. Je vais chez mon oncle S1SG go AT.HOME.OF my uncle 'I am going to my uncle's.'

| b. Je viens | de | chez | mon | oncle |
| :--- | :--- | :--- | :--- | :--- |
| SISG come | ABL | AT.HOME.OF my | uncle |  |

'I am coming from my uncle's.'

## 3. The Asymmetry hypothesis between the expressions of Source and Goal and its linguistic realization <br> Linguistic realization of the asymmetry

## (B)Morphosyntactic asymmetry

- Encoding of Goal is more straightforward: Goal markers may be optional

Stieng (Austro-Asiatic, Cambodia):
optionality of the Goal preposition
(Bon 2014:551)
(7)

| a. sədian lap di ga:h |  |
| :--- | :--- |
| person enter to forest |  |
|  | 'The person enters (to) the forest.' |

b. sədian lap $\varnothing$ ga:h
person enter $\varnothing$ forest
'The person enters the forest.'

## 3. The Asymmetry hypothesis between the expressions of Source and Goal and its linguistic realization <br> Linguistic realization of the asymmetry

## (C) Syntatici Asymmetry

- Syntactic constraints on Goal / Source arguments. (Kopecka \& Vuillermet 2021)
(8) a. I climbed from my room up the ladder onto the room.
b. I climbed onto the room.
c. I climbed up the ladder
d. *I climbed from my room.

All these examples point in the same direction: from differences in the way languages express Source and Goal to a tendency to favor the Goal or the endpoint when expressing a motion event.

## Outline

1. Methodology and data
2. Burmese morphosyntactic devices used to express Goal and Source grounds
3. The Asymmetry hypothesis in Goal and Source expressions
4. Asymmetry in Burmese
a. Semantic asymmetry
b. Morphosyntactic asymmetry
c. Syntactic asymmetry

## 4. Asymmetry in Burmese <br> (A) Semantic asymmetry: Case conflation

- Locative postposition os ma² can be used with:
- Static Locative Ground
 kəle ${ }^{3}-$ twe $^{2} \quad$ kaN $^{3} c^{h} e^{2}=$ ma $^{2}$ gəza ${ }^{3} \quad n e^{2}=t \varepsilon^{2}$ child-PL shore=LOC play IPFV=REAL 'The children are playing at the beach.'
- Goal Ground

| P ${ }^{3}$ | to ${ }^{3}$ | sa = $=\mathrm{ma}^{2}$ | yaว $=$ t $\varepsilon^{1}$ | Pəkha2 | 1=Tっ1 ... |
| :---: | :---: | :---: | :---: | :---: | :---: |
| DEM | forest | edge=LOC | arrive=REAL | moment | fall=WHEN |

When he arrived at the edge of the forest,...

## 4. Asymmetry in Burmese (A) Semantic asymmetry: Put on / Take off

- In the clothing lexicon, verbs show more semantic granularity with 'put on' (Goal-oriented) than 'take off' (Source-oriented)

Table 3: Verbs for
'put on' and 'take off'

| Put on (Goal oriented) | Take off (Source oriented) |
| :---: | :---: |
| ®® si ${ }^{3}$ 'put on, wear (shoes, etc.)' | Əર્欠 $c^{h} u$ ? 'take off, remove' (shoes, clothes, hat, etc.) |
| ®র্ט sup 'put on (socks, gloves, mask, etc.)' |  |
| ๆ¢์ $y a N^{3}$ '(of monk) wear or put on robe' | G10¢ $p^{h}$ you? 'take off, uncouple, unhitch' |
| ¢̊ youN ' 'wear or put on (a cloak or robe)' |  |
| oof wup 'wear, put on' |  |
| $6000 \delta^{\circ} s^{h} a>N^{2}$ 'wear a hat' |  |
| U§ $p a N^{2}$ 'wear in the hair' |  |

## 4. Asymmetry in Burmese <br> (B) Morphosyntactic asymmetry: Inventory size

- More postpositions dedicated to Source than Goal:
- 1 Goal postposition
- 2 Source postpositions

Table 4: Postpositions used for Goal and Source Grounds

| Postposition | Meaning | \# of Goal | \# of Source |
| :---: | :---: | :---: | :---: |
| m6s kane ${ }^{2}$ | Ablative | - | 53 |
| $m k a^{1}$ | Ablative | - | 74 |
| ${ }_{1} \mathrm{mma}^{2}$ | Locative | 2 | - |
| $\mathrm{m}_{\mathrm{L}} \mathrm{ko}^{2}$ | Allative | 96 | - |

Asymmetric but in favor of Source (against general tendency)

## 4. Asymmetry in Burmese <br> (B) Morphosyntactic asymmetry: Inventory size

- However, no semantic distinction between the 2 Source postpositions

 young.woman one=CLF cave inside=ABL exit go=REAL 'A young woman goes out of a cave.'

young.woman one=CLF cave interior=ABL go.out go=REAL
'A young woman goes out of a cave.'

## Against general tendency

## 4. Asymmetry in Burmese (B) Morphosyntactic asymmetry: Optionality

- Out of 126 Goal expressions, 25 are not marked with a postposition $>$ Goal-marking is optional
- Source-marking is compulsory

## 4. Asymmetry in Burmese (B) Morphosyntactic asymmetry: Complexity

- Source marking is NOT fundamentally more complex than Goal marking

Table 5: Number of Source and Goal Grounds, according to the type of construction

| Construction | \# of Goal | \# of Source |
| :--- | :---: | :---: |
| Bare noun | 2 | - |
| N - Rel | 19 | - |
| N - Rel - Rel | 4 | - |
| N - PostP | 9 | 13 |
| N - Rel - Post | 85 | 109 |
| N - Rel - Rel - PostP | 7 | 13 |

As seen before, only Goals can appear without a postposition

Similar proportion of Goals and Sources for the three constructions involving postpositions

## Symmetrig <br> (against genaral tendency)

## 4. Asymmetry in Burmese (B) Morphosyntactic asymmetry: Complexity

- We note that all Relational Nouns appears in both Goal and Source expressions

Table 6: Number of relator nouns occurring with Goals and Sources (only showing forms with at least 5 total occurrences)

| Postposition | Meaning | \# of Goal | \# of Source |
| :---: | :---: | :---: | :---: |
| $\infty \mathrm{t}^{\mathrm{h}} \varepsilon^{3}$ | Inside | 51 | 47 |
|  | Top | 17 | 27 |
| M0: cas | Between | 10 | 14 |
| ©ư sa? | Edge | 10 | 7 |
| $20 s^{\text {h }}{ }^{2}$ | Place, in presence of | 13 | 3 |
| 630ก์์ Paכ? | Underside | 3 | 11 |

## Symmetrig <br> (against genaral tendency)

## 4. Asymmetry in Burmese <br> (C) Syntactic asymmetry: Biclausal constructions

- Biclausal construction for Source expression
- Source is often expressed in a different, non-finite clause, in an iconic sequence
> Source is syntactically more complex than Goal

young.woman one-CLF tree foot=TOP stay=SUB.TIME lawn on=ALL run come=REAL
'A young woman comes running onto the lawn from the foot of the tree.'
(lit. 'having stayed at the foot of the tree, the young woman ran onto the lawn')

[kaכ $N^{2} m a^{1} l e^{3}$ tə-yaכ? $\left.g u^{2} \quad t^{h} \varepsilon^{3}=k a^{1} \quad n e^{2}=p y i^{3} t 0^{1}\right] \quad t^{h} w \varepsilon$ ? $l a^{2}=t \varepsilon^{2}$
young.woman one-CLF cave inside=ABL stay=SUB.TIME exit come=REAL

## 4. Asymmetry in Burmese <br> (C) Syntactic asymmetry: Constraints on arguments

- Syntactic constraint: Goal-oriented verbs may licence Source arguments
(13)

Verb oć wiN" 'enter':
$l u^{2} \quad$ tə-yaว? $\mathrm{gu}^{2} \quad \mathrm{t}^{\mathrm{h}} \varepsilon^{3}=k o^{2} \quad \mathrm{wiN}^{2} \quad \theta \mathrm{wa}^{3}=\mathrm{t} \varepsilon^{2}$
person one-CLF cave inside=ALL enter go=REAL
'A person went into the cave.'

$\mathrm{piN}^{2} \mid \varepsilon^{2}-k \mathrm{Na}^{3}-\mathrm{ce}^{2}=k a^{1} \quad \mathrm{gu}^{2} \quad \mathrm{t}^{\mathrm{h}} \varepsilon^{3}=k \mathrm{o}^{2} \quad \mathrm{wiN}^{2} \quad \theta \mathrm{wa}^{3}=\mathrm{t} \varepsilon^{2}$
sea-shore-origin=ABL cave interior=ALL enter go=REAL
'(She) went into the cave from the sea shore [away from the deictic center].'

With Source Ground

| PəpyiN $^{2}=k a^{1} n^{2}$ | wiN $^{2}$ | $\theta w a^{3}=t \varepsilon^{2}$ |
| :--- | :--- | :--- |
| outside=ABL | enter | go $=$ REAL |

She entered from the outside.'

## Symmetric

(against genearal tendency)

## Expression of Goal and Source in Burmese: Is there an asymmetry?

- Spatial symmetries:
- Source-marking is not more morphologically complex than Goal marking
- Goal-oriented Verbs may licence Goal and Source arguments

## 5. Conclusion

- Spatial asymmetries favoring Goals:
- Locative postposition can be used for Goal Grounds
- Goal markers are optional
- Source marking can be more syntactically complex than Goal marking, using biclausal constructions
- A spatial asymmetry favoring Source ?
- More postpositions are dedicated to Source: $k a^{1}$ and $k a^{1} n e^{2}$
- However, they convey the same meaning (true synonyms) and do not add any semantic granularity into the postpositional system

## 5. Conclusion

| Domain | Cross-linguistic tendency | Case of Burmese |
| :--- | :--- | :--- |
| Semantic | Conflation Locative-Allative rather <br> than Locative-Ablative | Locative postposition bs ma² can be used <br> for Goal Grounds |
|  | More semantic granularity for <br> Goal markers | No semantic granularity |
| Morphosyntactic | Goal marking is less complex | Goal markers are optional <br> More markers for Goals than <br> Sources |
| Verbs tend to allow for Goal <br> arguments but not Source <br> arguments | Goal markers are optional |  |
| Syntactic | Gore forms dedicated to Source markingMore complex syntax for Source <br> expression | Yes, with biclausal constructions Arguments licensed by |

## Thank you for your attention!
