According the PhD work of Emilie Gouriveau and David Gocel-Chalté, and the postdoc of Hannes Knapp

"Biodiversity" Session

The Bitcherland

Castle of frankenstein

A open agricultural plateau on clay rich loamy soils on the East

A wooded low mountain range on sandy soils on the West

Semi-continental climate

≈600 km² with 35 000 inhabitants

Today → no large industries beside farming and forestry

Past → mining, metal and glass works, farming and forestry

Ancient human presence with local lordships and monasteries

"Biodiversity" Session

Territorial stakes about social-ecological system

FR4100212 - LANDES ET TOURBIÈRES DU CAMP MILITAIRE DE BITCHE

FR4112006 - FORÊTS, ROCHERS ET ÉTANGS DU PAYS DE BITCHE

Réserve Naturelle ROCHERS ET TOURBIÈRES DU PAYS DE BITCHE

RBI du Rothenbruch
Office National des Forêts

"Biodiversity" Session

=> Aims to study the **disruptions** that have occurred in the territory, while measuring the capacities and strategies for human and ecosystem **resilience** at the scale of the local **social-ecological system**

This transformation must be examined particularly closely given that, from a historical point of view, **land-use planning** has been based on the **extraction and management of natural resources** (by industrial players and farmers/farm labourers) and on the control of space (by the military)

Visit of Kaiser Wilhelm II of Germany in 1903

"Biodiversity" Session

General aim => Acquiring and setting up a **knowledge base** (i.e., socle de connaissance) about the origin(s) and trajectory(ies) of the biodiversity in the territory

=> various tools and indicators used in a complementarity to reconstruct images of the past biodiversity and of various socio-ecosystems of the Pays de Bitche, such as peat bogs, forests, and agricultural areas

= **Interdisciplinary and multi-site approach**

"Biodiversity" Session

Robin, 2021. Revue forestière française

Methods

Various “paleo-works” have been realized to reconstruct the **past links between human and their environments**, related to the **use of natural resources** (soil, wood and water)

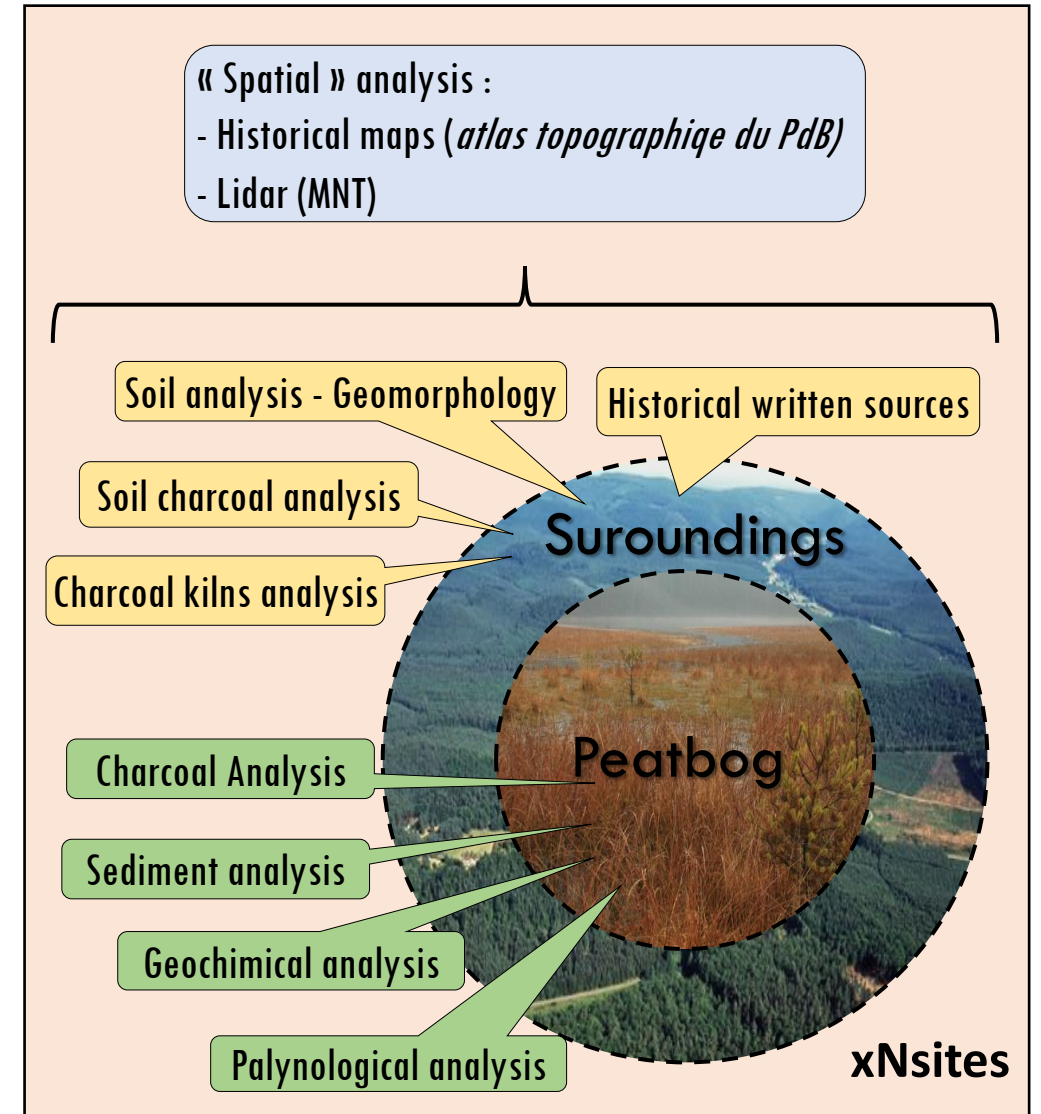

This interdisciplinary approach combines **environmental sciences and ecology**, such as palynology and anthracology, with **human sciences**, such as geoarchaeology and history

- > About ten OHM projects from 2016 to 2022
- > Five type of **indicator** and related approches :
 - **Pollens**
 - **Charcoals**
 - **Soils**
 - **Landforms**
 - **Historical written sources**

Paleoecology

Geography

"Biodiversity" Session

Origin(s) and retrospective trajectory(ies) of the biodiversity in the *Pays de Bitche*

Main results and insights

"Biodiversity" Session

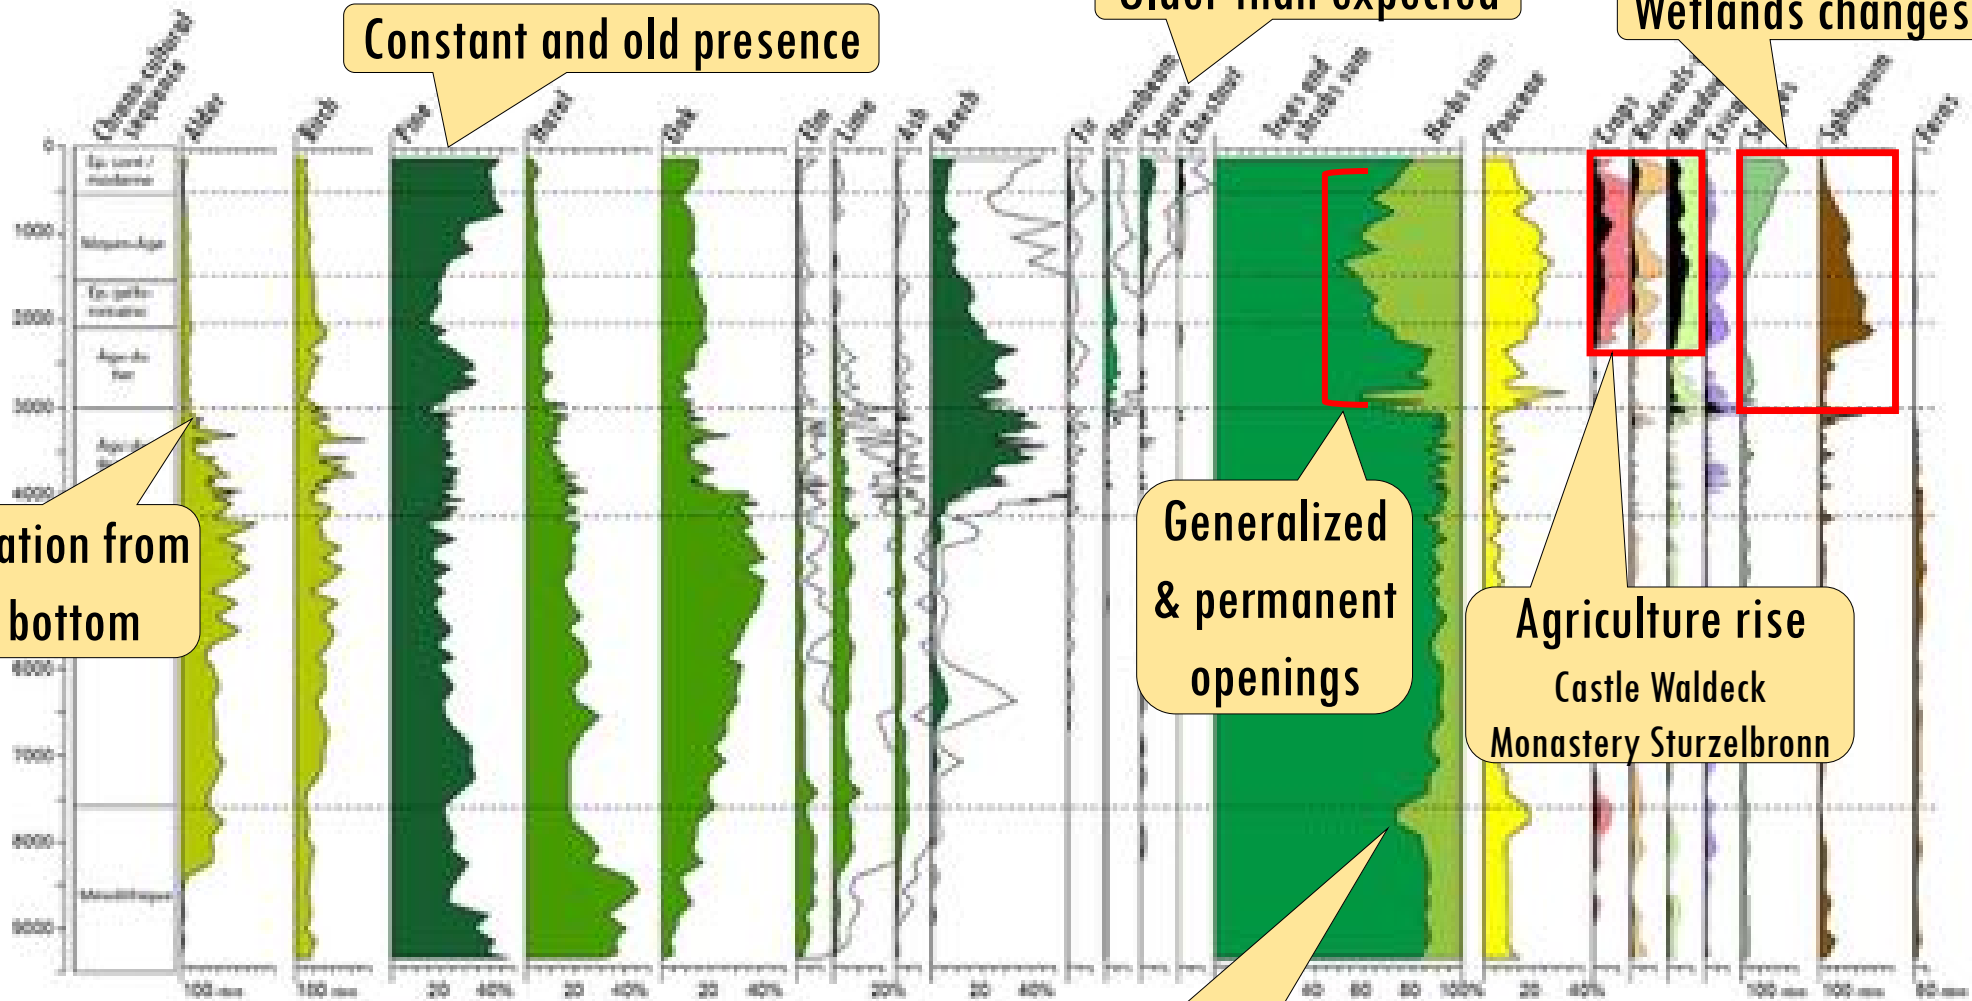

Main results and insights

Diagramme pollinique de la Horn représenté en âge (cal. BP).

Landscapes long term trajectories

Deforestation from valley bottom

Constant and old presence

Older than expected

Wetlands changes

Generalized & permanent openings

Agriculture rise
Castle Waldeck
Monastery Sturzelbronn

First human impact

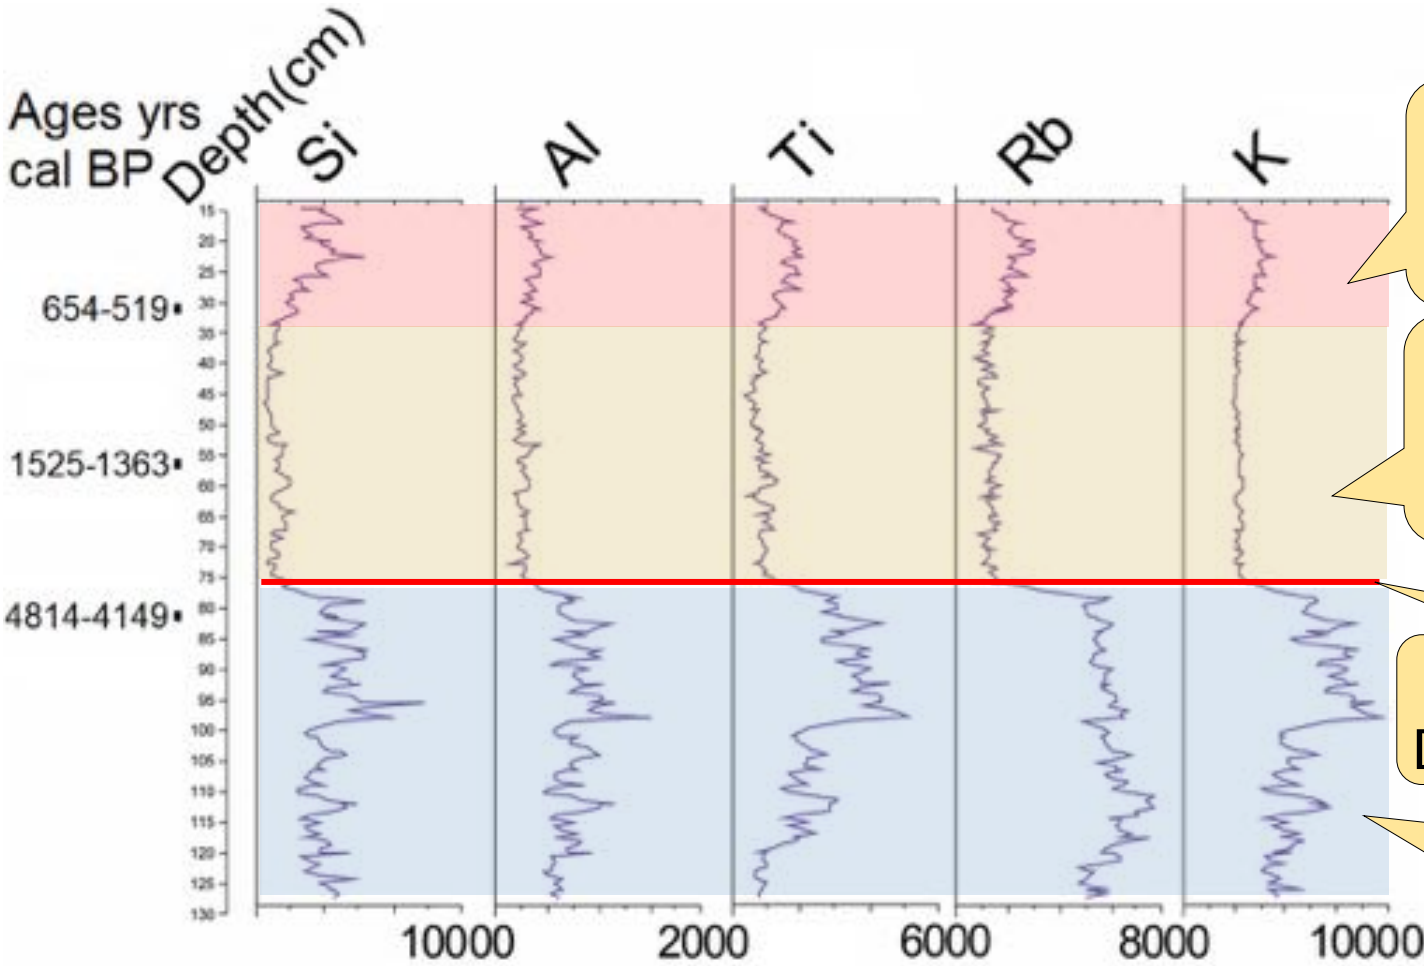

"Biodiversity" Session

Gouriveau et al. 2020. The Holocene

Main results and insights

↳ Wetland long term trajectories

Erosion increase
Deforestation intensification
due to local wood harvesting

Weak sediment accumulation
while agriculture rise at valley
bottom

Hydrological local changes
Deforestation at bottom valleys

High erosion due to
local deforestation

"Biodiversity" Session

Main results and insights

↳ Landscapes long term trajectories

Indexed charcoal signal from seven sequences from the Pays de Bitche

High regional fire activity

Woodlands opening thought man-made fire

First fire influx

"Biodiversity" Session

Origin(s) and retrospective trajectory(ies) of the biodiversity in the *Pays de Bitche*

Main results and insights

↳ Past land use: farming

Historical maps

Field observations

Lidar - MNT

Study area = area covered with LiDAR (app. 180km²)

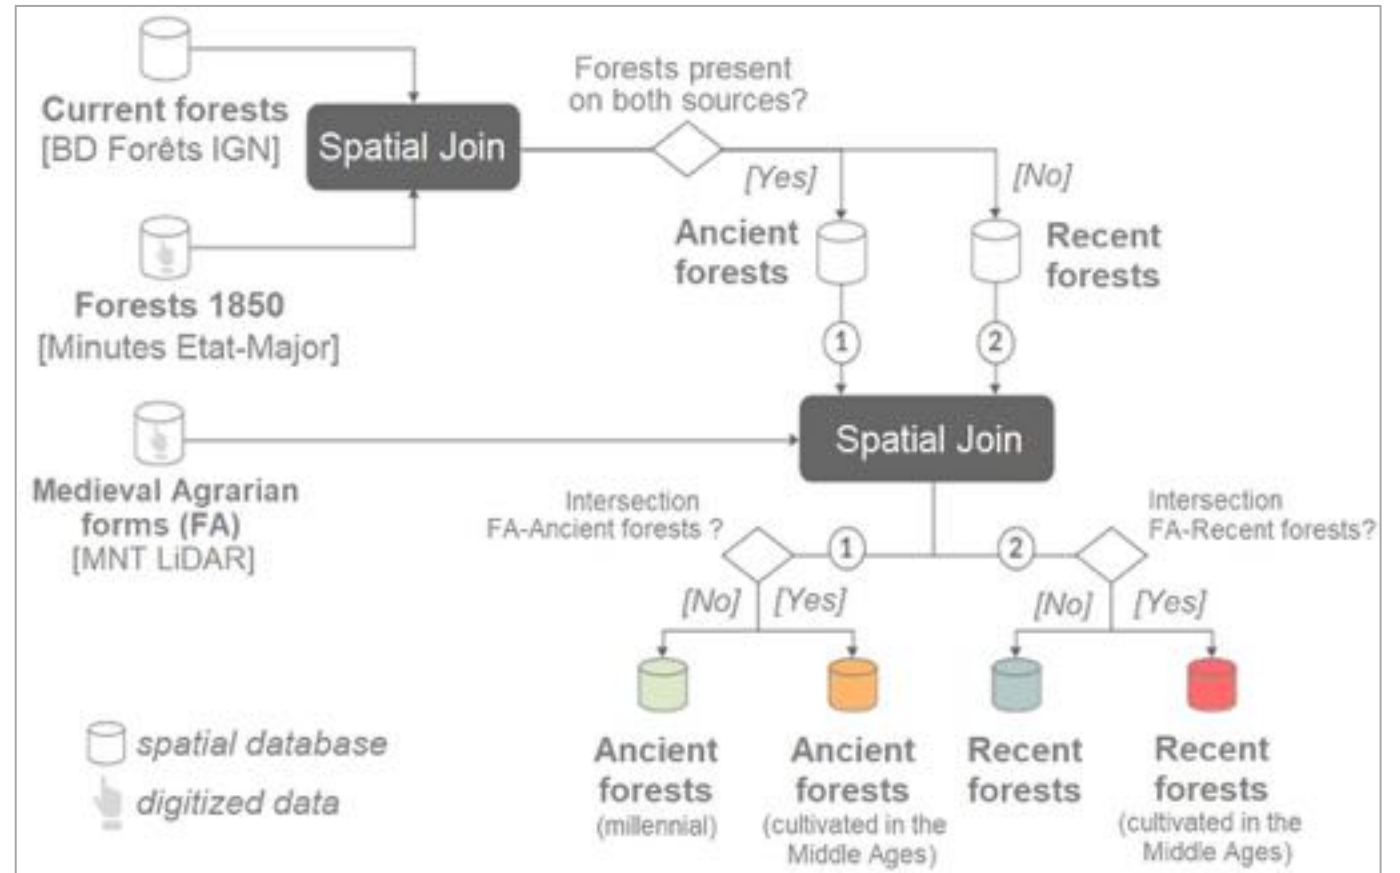

Diagram of reconstruction of temporal trajectories established from inherited agrarian forms (FA ; Herrault et al., according Duclos 2022)

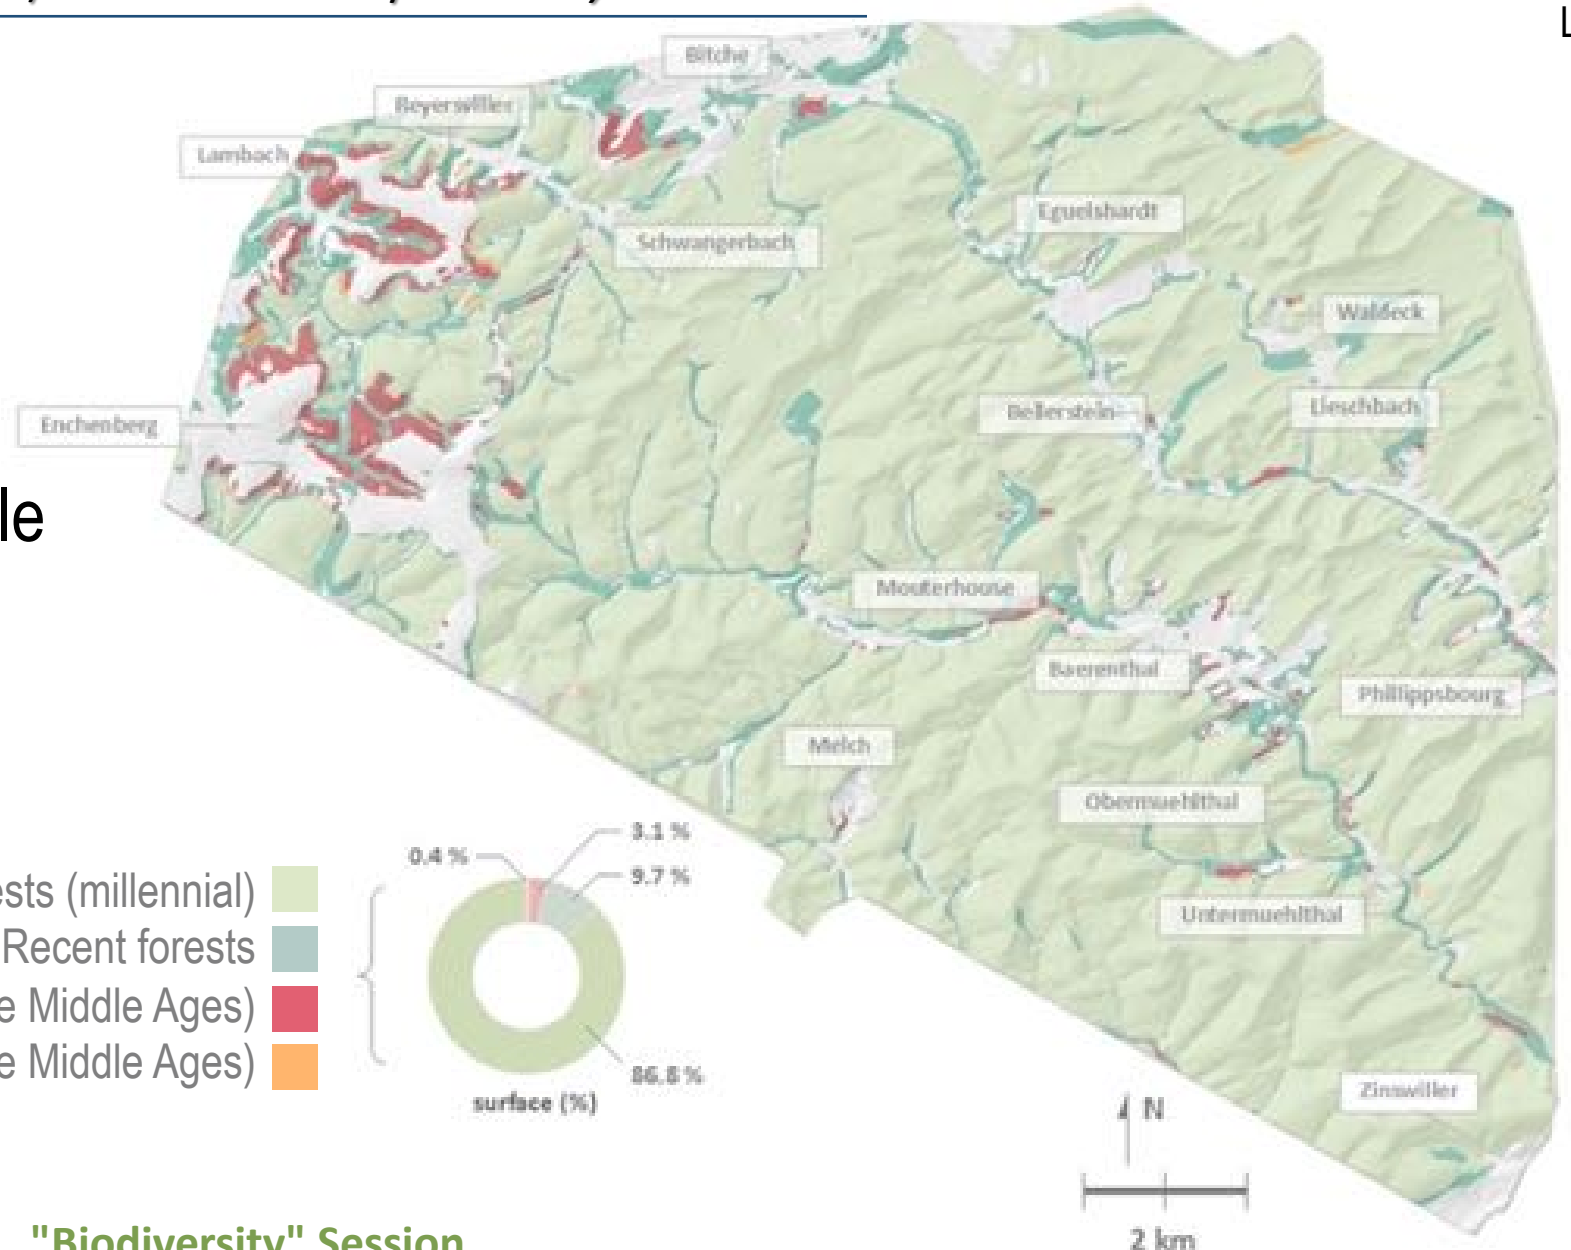

"Biodiversity" Session

Main results and insights

↳ Past land use: farming

Forest trajectories of the study area* from the Middle Ages to the present day

(Herrault et al., according Duclos 2022)

"Biodiversity" Session

Main results and insights
↳ Forests trajectories

Wood resources exploited for foundries and glassworks particularly from 1760 onwards => According Historical written sources and historical maps

« atlas topographique du Pays de Bitche » 1758

Historical harvest record : Same area in 1762 & 1763

=> Gathering data relating to 415 coppices with standards and 340 000 trees earmarked to be cut down **between 1762 and 1785**

Main results and insights

↳ Forests trajectories

Wood resources exploited for foundries and glassworks particularly from 1760 onwards => According Historical written sources and historical maps

« atlas topographique du Pays de Bitche » 1758

Historical harvest record : Same area in 1762 & 1763

=> Gathering data relating to 415 coppices with standards and 340 000 trees earmarked to be cut down **between 1762 and 1785**

"Biodiversity" Session

Investigation of different components of past landscape => **structuring current landscapes**

Investigation of different components of past landscape => **structuring current landscapes**

Territory having its own, specific, trajectory, with **local ecosystems changes related to human activities** having significant impacts since the Bronze Age, and even more since the Middle Ages

Ecosystems mosaic development during Middle Ages = **Biodiversity maintaining** at the territory scale, but with possible high anthropic pressure locally

Investigation of different components of past landscape => **structuring current landscapes**

Territory having its own, specific, trajectory, with **local ecosystems changes related to human activities** having significant impacts since the Bronze Age, and even more since the Middle Ages

Socio-ecosystems as identity of the territory, established after a local **long term Human-Environment interactions**

Ecosystems mosaic development during Middle Ages = **Biodiversity maintaining** at the territory scale, but with possible high anthropic pressure locally

Mosaic still present today = **legacy of the human imprint** on the Pays de Bitche

Investigation of different components of past landscape => **structuring current landscapes**

Territory having its own, specific, trajectory, with **local ecosystems changes related to human activities** having significant impacts since the Bronze Age, and even more since the Middle Ages

Socio-ecosystems as identity of the territory, established after a local **long term Human-Environment interactions**

Ecosystems mosaic development during Middle Ages = **Biodiversity maintaining** at the territory scale, but with possible high anthropic pressure locally

Mosaic still present today = **legacy of the human imprint** on the Pays de Bitche

= **Management practises in the territory**, such as maintaining pastoralism in wet meadows (program "le paysage a du goût"), forest conservation, wetland restoration, but also forestry, or even the military activities, **are consistent with the long term landscape dynamics** observed in our studies
