HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Background Antibiotic Microbial Resistance (AMR) is a major public health issue prioritized by international institutions. The ABRomics project is funded by the French Priority Plan on antibioresistance (2M€; 2021-2025). We developed a shared web platform to assist AMR surveillance across human and veterinary medicine, including environment and food isolates. It is made of:

- a repository of structured, interoperable, standardized and well-annotated multi-omics microbiological data from human, animal and environmental origins
- with an up-to-date arsenal of mathematical and bioinformatic tools to answer generic and specific research questions related to AMR

From Omics Workflows ...

Workflows here

Quality & Taxonomic assignment & Contamination Control

Assembly: Flye, Polypolish, QUAST, Bandage

AMR Gene Detection: Baktia, PlasmidFinder, ISEScan, IntegronFinder, AMRicate, AMRFinderPlus, StarAMR

Leveraging by a large community and a 43 teams consortium; **Our ambition** is to make ABRomics a major platform to scale up and improve surveillance and research on antibiotic resistance from a One Health perspective. For this, we will:

- Enrich the ABRomics AMR resources with the help and expertise of both the community and the consortium.
- Expand the catalogue of available analyses to more Omics data.

ABRomics consortium

- Effort at the national level : 43 research teams and platforms !
- Multidisciplinary consortium
- Includes all National Reference Centers (CNR) for antibiotic resistance
- Coordination by the French Institute for Bioinformatics (Claudine Médigue) and Institut Pasteur (Philippe Glaser)

Next steps !
