Submitted on 20 Jun 2024

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

A Unix competency framework for learning bioinformatics

Hélène Chiapello^{1,2}, Thomas Denecker¹, Lucie Khamvongsa Charbonnier¹, Pierre Poulain³, Denis Puthier⁴, Olivier Sand^{1,5}, Morgane Thomas-Chollier^{1,6} and Claire Toffano-Nioche⁷

Lille, CNRS, Inserm, CHU Lille, Institut Pasteur de Lille, US 41 - UAR 2014 - PLBS; 6 Institut de Biologie de l'ENS (IBENS), Département de biologie, École normale supérieure, CNRS, INSERM, Université PSL; 7 Université Paris-Saclay, CEA, CNRS, Institute for Integrative Biology of the Cell (I2BC).

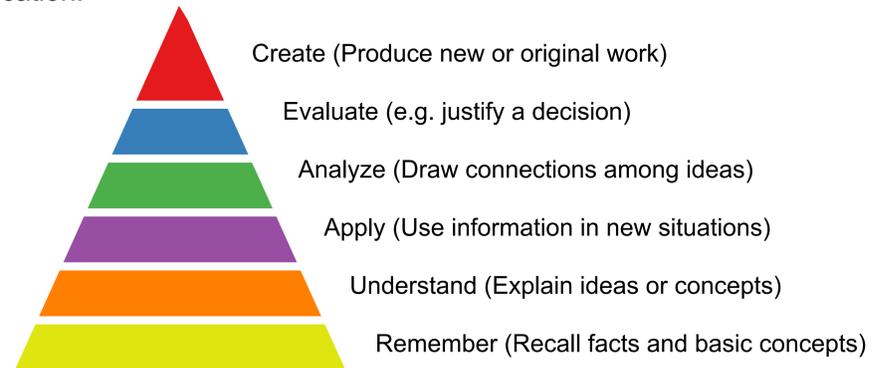

Introduction

- Bioinformatics relies on core tasks running on Unix computing infrastructures such as the IFB NNCR
- There is a need to correlate these bioinformatics tasks with required Unix skills (e.g., navigation, file manipulation, basic scripting, etc.)
- We propose a Unix competency framework that provides a thematic grouping and a rating system to classify the skills required (e.g., beginner, intermediate, advanced) using the Bloom taxonomy

Aim: formalise the competencies in Unix for bioinformatics, independtly of learning approach

The Bloom Taxonomy

- Bloom's taxonomy is a hierarchical classification of the key stages in the learning process. Today, it is used by trainers in professional development, particularly within instructional design strategies. Below is a diagram that summarizes the principle of this classification.

The competency framework

This version 1 presents four levels of competencies:

- U1** Terminal, shell and Unix command
- U2** Structure and operation of a command in the file system
- U3** Advanced exploration of the file system, and workspace
- U4** Motifs, redirection, pipe, flux

Download the competency framework
<https://zenodo.org/doi/10.5281/zenodo.12104693>

Terminal, shell and Unix command U1

- Explain the differences between a terminal and a shell
- Give examples of Unix shells
- Describe the three possible parts constituting the structure of a Unix command
- Explain the importance of space in a Unix command
- Name the command that displays the date
- Indicate the key to use to execute a command written in the terminal
- Name the command that displays the contents of a directory

Example for the first level

Associated pedagogical content : **sandbox.bio** server with 4 tutorials to learn the competency skills - **no installation required !**

sandbox.bio hosted by IFB

Basics of the Unix command line interface
 by French Institute of Bioinformatics

unix shell terminal

Welcome!

During this course, you will discover the Unix system and run some Bash commands.

Targeted audiences

- Bioinformatics teachers and trainers**
 - evaluate Unix skills of their students/trainees before a bioinformatics course/hand-on session
 - clarify the Unix pre-requisites for a course/training
- Bioinformatics students, learners and trainees**
 - help them to evaluate their level and learning needs
- Biologists, researchers unfamiliar with Unix** and command line usage
 - inform and encourage them to acquire core graduated Unix competencies

We encourage all bioinformatics learners and users to assess their current Unix skills using the matrix

Use cases

- Example for trainers and teachers (ex. EBAll training)**

Prerequisites/Before training

Biologist who does not use the command line

Unix U1 U2 U3 U4
 ✓

Learning outcomes/After training

Biologists who can construct a command line

Unix U1 U2 U3 U4
 ✓ ✓ ✓

- Example for trainees and students**

Evolution of a student's skills during his university studies

Unix	U1	U2	U3	U4	U5	U6	U7
Early in L3	✓	✗	✗	✗	✗	✗	✗
Early in M1	✓	✓	✓	✗	✗	✗	✗
Early in M2	✓	✓	✓	✓	✓	✓	✗
