HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Deep-sea benthic foraminiferal faunas and elemental composition to monitor ecosystem recovery after decades of bauxite residue disposal in Cassidaigne canyon (NW Mediterranean sea)

(3) Foraminiferal geochemistry

ACKNOWLEDGEMENT. We thank the authorities of Parc National des Calanques for the permission to collect samples in the Park, and the crew of R/V Antédon II and R/V Téthys II for successful sampling cruises. This study was funded by LabEx OT-Med and LabEx DRIIHM. P.Gély benefited from a TIGER (France 2030) scholarship.
