

High resolution far-Infrared synchrotron spectroscopy  
of 2-furfural conformers: fundamental and hot bands analyses

Sathapana Chawananon, Manuel Goubet, Robert Georges, Anthony Roucou,  
Ikram Hadj Said, Mar 徽 Luisa Senent, Arnaud Cuisset and Pierre

Asselin

Table S1 : Line list of the ground and excited state rotational transitions of trans-2-furfural measured by Motiyenko et al., fitted globally with the rovibrational lines of vibrational states  $v_{27}=1$ ,  $v_{19}=1$ ,  $v_{26}=1$  and  $v_{25}=1$  measured in the present study.  $e''$  and  $e'$  are used as flags for the initial and final vibrational states of the transitions (ground state :0,  $v_{26}:1$ ,  $v_{19}:2$ ,  $v_{27}:3$ ,  $v_{25}:4$ ).

Table S2 : Line list of the ground and excited state rotational transitions of cis-2-furfural measured by Motiyenko et al., fitted globally with the rovibrational lines of the vibrational state  $v_{26}=1$  measured in the present study.  $e_l''$  and  $e_l'$  are used as flags for the initial and final vibrational states of the transitions (ground state :0,  $v_{26}:1$ ,  $v_{19}:2$ ,  $v_{27}:3$ ).
