About me

Ludovic Moncla

- Associate professor in Computer Science at INSA Lyon & LIRIS
- NLP, GIS, Digital Humanities

Current PhD students

- **Alice Brenon** (Feb. 2021-): Methods and tools for geographic discourse analysis
- **Yassir Lairgi** (Dec. 2023-): Large Language Models, Knowledge Graphs and Dynamic Graph Neural Networks for competitive intelligence (*industrial CIFRE agreement*)
- **Antoine Taroni** (Oct. 2024-): Interpretability of Large Language Models: towards a hybrid neuro-symbolic approach for the analysis of geographical discourse

Summary of the talk

1. The GeoEDdA dataset: A Gold Standard Dataset for Geo-semantic Annotation
2. BERT fine-tuning for NER
3. Few-shot prompting for NER
4. Perspectives: Knowledge Graph construction using LLMs

Summary of the talk

1. The GeoEDdA dataset: A Gold Standard Dataset for Geo-semantic Annotation
 - collaborative work with D. Vigier & K. McDonough
2. BERT fine-tuning for NER
3. Few-shot prompting for NER
4. Perspectives: Knowledge Graph construction using LLMs

A Gold Standard Dataset for Geo-semantic Annotation

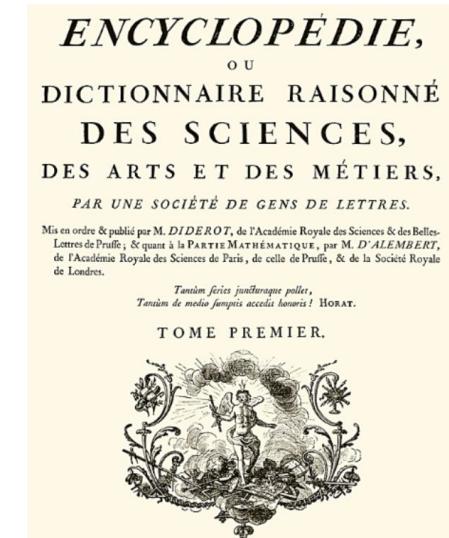

Introduction

Objectives

- Propose a methodology for building a gold standard dataset for geo-semantic annotation
 - Define an annotation schema that goes beyond standard NER
 - Experiment an active learning method for assisted corpus construction
- Train a first span categorization model

Dataset

- Diderot & d'Alembert, eds., Encyclopédie
 - ARTFL Project (<https://artfl-project.uchicago.edu/>)
 - 74,000 articles

A Gold Standard Dataset for Geo-semantic Annotation

GLASCOW

GLASCOW, *Glarona, (Géog.)* ville d'Ecosse dans la province de Clydale, avec une célèbre université; elle étoit autrefois archi-épiscopale : la cathédrale subsiste encore, & c'est un beau morceau d'Architecture. On appelle Glasgow *le paradis d'Ecosse*. Il s'y fait un grand commerce, à cause de son port & de son havre ; elle est sur la Clyde, à quatre lieues S. O. de Dumbarton, quatorze O. d'Edimbourg, six de Sterling, cent-quatorze N. O. de Londres. *Longit. 13. 36. latit. 56. 20.*²

Cette ville a produit plusieurs gens éminens dans les Sciences ; je n'en nommerai que deux qui se présentent à ma mémoire, Cameron & Spootswood. Le premier s'est distingué par ses *remarques sur le nouveau testament*, qui sont également savantes & judicieuses ; il mourut à Montauban vers l'an 1625 à quarante-six ans. Spootswood devint archevêque de Saint André, & primat de toute l'Ecosse : il couronna Charles I. en 1633, fut lord chancelier, & mourut en 1639, âgé de soixante-quatorze ans. On a de lui une *histoire ecclésiastique d'Ecosse* fort estimée ; elle s'étend depuis l'an 203 de J. C. jusqu'en 1624. (D. J.)

A Gold Standard Dataset for Geo-semantic Annotation

Structure: headword & domain-mark

GLASCOW, Glarona, (Geog.) city of Scotland in the province of Clydale, with a famous university; it was formerly archi-episcopal:

Head

Domain-mark

the cathedral still survives, & it is a beautiful piece of Architecture. Glasgow is called the paradise of Scotland. There is a great deal of trade there, because of its port and harbour; it is on the Clyde, four leagues south-west of Dumbarton fourteen west of Edinburgh, six of Sterling, one hundred and fourteen N. W. of London. Longit. 13. 36. latit. 56. 20. This town has produced several eminent people in Science; I will name only two who stand out in my memory, Cameron & Spootswood. The former distinguished himself by his remarks on the New Testament, which are equally learned and judicious; he died in Montauban around the year 1625 at the age of forty-six. Spootswood became archbishop of Saint Andrew, and primate of all Scotland: he crowned Charles I. in 1633, was Lord Chancellor, and died in 1639, aged seventy-four. He is the author of a highly esteemed ecclesiastical history of Scotland, which extends from 203 A.D. to 1624 (D. J.).

A Gold Standard Dataset for Geo-semantic Annotation

Annotation schema

Active learning for dataset labeling

Semi-automatic annotation

- First, manual annotation of few samples (around 40 paragraphs):
 - Number of spans: NP-Spatial: 147, ENE-Spatial: 89, NC-Spatial: 72, Relation: 62, Latlong: 16, NP-Person: 16, NC-Person: 8, ENE-Person: 5, NP-Misc: 3, ENE-Misc: 2
 - Precision: **73.86**, Recall: **58.56**, F-score: **65.33** (*on a very small test set*)
- Then, the active learning loop:
 - Train spaCy spancat model (with Prodigy)
 - Evaluate model
 - Correct predicted annotations on new paragraphs

The screenshot shows a sentence from a document: "ILLESCAS, (Géog.) petite ville d'Espagne, dans la nouvelle Castille, à six lieues au sud de Madrid." Below the sentence, several spans are highlighted with colored bars: a blue bar for the Head, a green bar for Domain-mar, a purple bar for NC-Spatial, a yellow bar for NP-Spatial, a red bar for Relation, another yellow bar for NP-Spatial, and a green bar for ENE-Spatial. At the bottom, there are four buttons: a green checkmark, a red X, a grey circle, and a grey arrow pointing left.

Summary of the talk

1. The GeoEDdA dataset: A Gold Standard Dataset for Geo-semantic Annotation
2. BERT fine-tuning for NER
3. Few-shot prompting for NER
 - collaborative work with H. Zeghidi (Master's intern)
4. Perspectives: Knowledge Graph construction using LLMs

Few-shot prompting for NER

- How effective are few-shot learning techniques with LLMs for performing NER tasks?

Our proposal

- Evaluate few-shot prompting
- With predefined JSON-format output
- Experiment both span and token-based annotations

Few-shot prompting for NER

- A preliminary experiment reveals that LLMs struggle to accurately retrieve or calculate token or span positions from raw input text.
- Although the output format was correct, the generated position values were inaccurate, resembling hallucinations or random numbers rather than referring to actual token positions.
- We propose a solution that includes tokenization information, specifically, token position details for span detection, within the input data.

Few-shot prompting for NER

Prompt part 1: description of the task and tagset

You are an expert in Natural Language Processing. Your task is to identify common Named Entities (NER) in a given text.

The possible common Named Entities (NER) types are exclusively: (Domain-mark, Head, NC-Person, NC-Spatial, NP-Misc, NP-Person, NP-Spatial, Relation)

:

1.Domain-mark: words indicating the knowledge domain (usually after the head and between parenthesis) such as 'Géog., Géog. mod., Géog. anc., Géogr., ist. nat., Gram., Géogr. anc., Jurisprud., Géog. anc. & mod., Gramm., Geog.'

2.Head: entry name at the beginning of the sentence and is almost always in uppercase such as 'Aire, Afrique, Aigle, ILLESCAS, MULHAUSEN, ADDA, SINTR u AKSTEDE, KEITH, CAÇERES, CARMAGNOLE, AGRIGNON, INSPRUCK'

3.NC-Person: a common noun that identifies a person such as 'M., roi, S., peuples, l'empereur, son fils, les habitans, prince, peuple, le roi, fils,

4.NC-Spatial: a common noun that identifies a spatial entity including natural features such as 'ville, petite ville, la riviere, la mer, royaume, la ville, l'île, cette ville, pays, la côte, riviere'

5.NP-Misc: a proper noun identifying entities not classified as spatial or person such as 'l'Eglise, grec, 1707, russe, Glaciale, Noire, romain, la nt, 1693, Sud, 1614'

6.NP-Person: a proper noun identifying the name of a person (person named entities) such as 'Ptolomée, Pline, Strabon, Euripide, les Romains, Pierre, urcs, Dieu, César, Antonin, les Espagnols'

7.NP-Spatial: a proper noun identifying the name of a place (spatial named entities) such as 'France, Allemagne, Italie, Espagne, Afrique, Asie, Pari ome, Russie, la Chine, l'Amérique méridionale'

8.Relation: spatial relation such as 'dans, sur, au, en, entre, près de, se jette dans, proche, par, vers, près du, jusqu'à, à l'orient'.

9.Latlong: geographic coordinates such as 'Long. 31. 58. lat. 40. 55, Long. 10. 27. lat. 43. 30, Long. 28. 14. lat. 51. 13, Long. 14. 46. lat. 56. 20 15, Long. 25. 20. lat. 44. 43, Lat. 19. 40, Long. selon Harris, 29. 16. 15. lat. 47. 15, Long. 14. 28. lat : 53. 50, Long. 57. lat. 38. 35, Long. 22. 11. 18. lat. 40. 41, Long. 27. 40. lat. 51. 50'.

Few-shot prompting for NER

Impact of the output format

Span-based evaluation

- Unusual issues compared to traditional NER arise as the output format is more complex than at the token level.
- The experiment confirmed the performance improvement between GPT versions:

	GPT-3.5	GPT-4o
Correct predicted spans (both boundaries and labels)	28%	49%
Partially correct (partial boundaries and correct labels)	13%	9%
Total	41%	58%

- Using GPT-3.5, some answers do not refer to the input document but rather to the example from the prompt.
- In very few cases, some answers do not strictly follow the predefined JSON output format and some token attributes may be missing (such as start, end, text, or label).

Few-shot prompting for NER

OpenAI GPTs

Token-based evaluation

Model	Precision	Recall	F1
GPT-3.5	0.81	0.36	0.50
GPT-4	0.75	0.62	0.67
GPT-4o	0.68	0.72	0.70
Fine-tuned BERT	0.93	0.94	0.93

Few-shot prompting for NER

What is the performance of “small” local LLMs

- Llama 3.1 - 8B (Meta),
- Phi3 mini - 4k (Microsoft),
- Gemma 2 - 9B (Google),
- Mistral v0.2 - 7B (MistralAI),
- Qwen 2 - 7B (Alibaba Group)

Experiments were conducted using LM Studio on two configurations: an Nvidia RTX 3500 ADA GPU and an Apple M1 Max with 32GB of RAM.

- Some LLMs provide the correct JSON output syntax but don’t really understand the defined set of labels.
- Others completely don’t understand the task and do anything or simply repeat the input sentence

Model RAM Usage 4.51 GB

System Prompt

You are an expert in Natural Language Processing. Your task is to identify common Named Entities (NER) in a given text. The possible common Named Entities (NER) types are exclusively: (Domain-mark, Head, NC-Person, NC-Spatial, NP-Misc, NP-Person, NP-Spatial, Relation) and can be described as: Domain-mark: an indicator of the knowledge domain (comes after the head and between parenthesis) such as 'Géog', 'Géog, mod', 'Géog, anc', 'Géogr', 'Géogr, mod.', 'Marine, Hist, nat, Gram, 'Géogr, anc., Jurisprud, 'Géogr, anc & mod, Gramm, 'Geog'. 2.Head: entry name at the beginning of the sentence and is almost always in uppercase 3.NC-Person: a common noun that identifies a person such as 'M', 'roi', 'S', 'peuples', 'l'empereur, son fils, les habitants, prince, people, le roi, fils, le P, habitants. 4.NC-Spatial: a common noun that identifies a

Microsoft Phi 3 mini 4k

The screenshot shows the Imstudio-community AI interface. At the top, it displays 'RAM Usage 3.38 GB' and 'CPU: 0.00 %'. The title bar reads 'Imstudio-community • Phi 3 1 mini 4k instruct 3B Q4_K_M gguf'. Below the title bar are buttons for '+ New Chat (⌘N)', 'Export', and several model tags: 'Phi-3' (purple), '3B' (green), 'Q4_K_M' (blue) with an info icon, and 'GGUF' (purple). On the right, there are 'plaintext' and 'markdown' options. A large text area contains the following analysis:

Les informations données semblent décrites dans un format pré-agencé ou des annotations de texte, où les nombres sont associés à certains mots. Voici la traduction en français avec une interprétation possible basée sur le contexte historique et géographique :

Gènes (0) est une ville romaine située dans l'Italie actuelle (1). Elle était célèbre pour ses monuments architecturaux anciens, notamment les Gènes du Moyen Âge (2). Situées au centre de la région méditerranéenne d'Épire en Grèce antique, elles étaient un centre économique prospère avec une activité commerciale intense. La ville était également connue pour sa position stratégique entre le nord-ouest et le sud du pays (3).

Pendant les époques médiévale et moderne de Gènes, la cathédrale Sainte Marie a été l'un des monuments religieux emblématiques de la ville. Un autre monument notable était "la Maison d'Auguste" située sur le site antique du Palais Impérial (4).

En ce qui concerne les époques anciennes, Gènes avait une position stratégique significative en raison de sa situation géographique dans la plaine méditerranéenne. L'empereur Auguste a probablement établi son palais sur un site antique près du centre-ville (5).

Gènes était également célèbre pour ses édifices publics magnifiques et plusieurs palais importants existaient à cette époque, notamment ceux situés dans

Google Gemma 2 - 9B

The screenshot shows a dark-themed interface for the lmstudio-community platform. At the top, there's a header bar with 'RAM Usage 6.09 GB' and 'CPU: 0.00 %'. Below the header, the title 'lmstudio-community · gemma 2 it 9B Q4_K_M gguf' is displayed. The main content area contains a message from 'gemma2' (9B, Q4_K_M, 1, GGUF) to the user. The message text is as follows:

It looks like we have a bunch of coordinates, measurements, names, and some strange code snippets!

Let's break down what might be going on:

Possible Scenarios:

- **Mapping Project:** The coordinates could represent locations, landmarks, or boundaries on a map. The measurements might indicate distances between points, elevations, or sizes of geographical features.
- **Historical Research:** The names and dates might refer to historical figures, events, or places. The code snippets could be fragments of old maps, documents, or architectural plans.
- **Data Analysis:** The numbers and letters might represent data points being analyzed for patterns or trends.

Let's Decode Further:

To understand the context better, we need more information:

1. **What is the Source?** Where did this information come from? A book, a website, an archive?
2. **What is the Overall Topic?** Is it related to geography, history, art, science?
3. **Can you Provide More Context?** Any additional details about the surrounding text or the purpose of gathering this information would be helpful.

Let me know if you have any more clues, and I'll do my best to help decipher this intriguing puzzle!

At the bottom of the interface, there are two buttons: 'Regenerate' and 'Continue'.

This text appears to be describing the location and history of Genoa, a city in Italy. Here is a summary in English:

Genoa, located on the Italian Riviera, was an ancient wealthy city and the capital of the Republic of Genoa. Its exact origins are unknown but it is believed to have been founded by Janus, the two-faced Roman god. The city has been influential in Italy and Europe throughout history. It was a major commercial center, with many beautiful churches, public buildings, and palaces. Its location on the Mediterranean Sea made it an important trading port, and it was strategically situated between Milan, Turin, Parma, Florence, and Rome. The text mentions several famous historical figures associated with Genoa, including Salvego Cassini and the Grimaldi family.

The text also provides the latitude and longitude of Genoa as follows: 44°25' N, 8°31' E. This information could be useful for someone trying to locate Genoa on a map or using GPS coordinates. The text ends with a quote from Dante Alighieri's Divine Comedy, referencing Janus and the idea that Genoa has been an influential city throughout history.
