HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

¹GenOuest, University of Rennes, INRIA, CNRS, IRISA, Rennes, France, ² CNRS, Institut Français de Bioinformatique, IFB-Core, UAR 3601, 91000, Evry, France

EuroScienceGateway Project Context

Facilitating access to computing and storage infrastructures across Europe in line with the needs of researchers in multiple scientific fields (Biodiversity, Astronomy, Climate and Material Science)

The GenOuest platform, in close collaboration with the Institut Français de Bioinformatique (IFB), is developing the national UseGalaxy.fr server by implementing technologies that enable interoperability between the infrastructures available throughout Europe. An ESG goal is to enhance maturity of 6 national Galaxy servers, including UseGalaxy.fr (TRL-9).

galaxyproject.org/projects/esg

Galaxy: an accessible web portal for FAIR data analysis

Common set of tools and workflows, connection to Pulsar endpoints, shared reference data and Apptainer images (CVMFS), federated login, ...

Local scheduling system

Local scheduling system

Message Queuing System

CernVM File System (CVMFS) distributed file system for sharing:

- Reference Data (genomes and indices)
- Tool containers (Biocontainers)

Remote scheduling system

Virtual Galaxy Compute Nodes

boot from VGCN images

Standard image including everything required components to run Galaxy jobs

pulsar, docker, singularity, autofs, CVMFS

github.com/usegalaxy-eu/vgcn

PULSAR

Job execution with Pulsar

The task is launched from the graphical user interface, then the data is transferred to the IFB cluster. The destination of a pulsar can be configured within the Total Perspective Vortex plugin configuration. The results are sent to the graphical user interface.

Ongoing developments from EuroScienceGateway

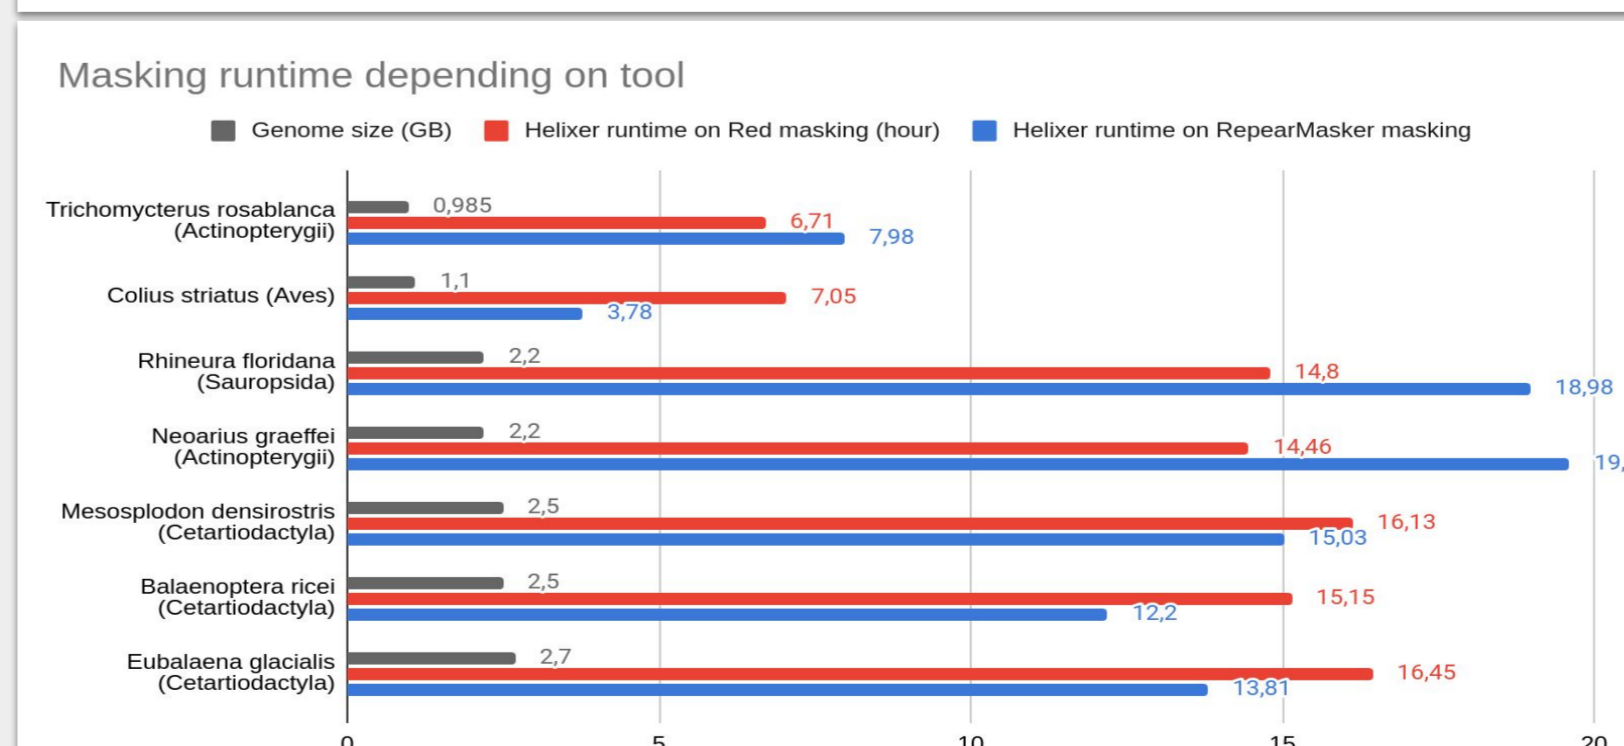

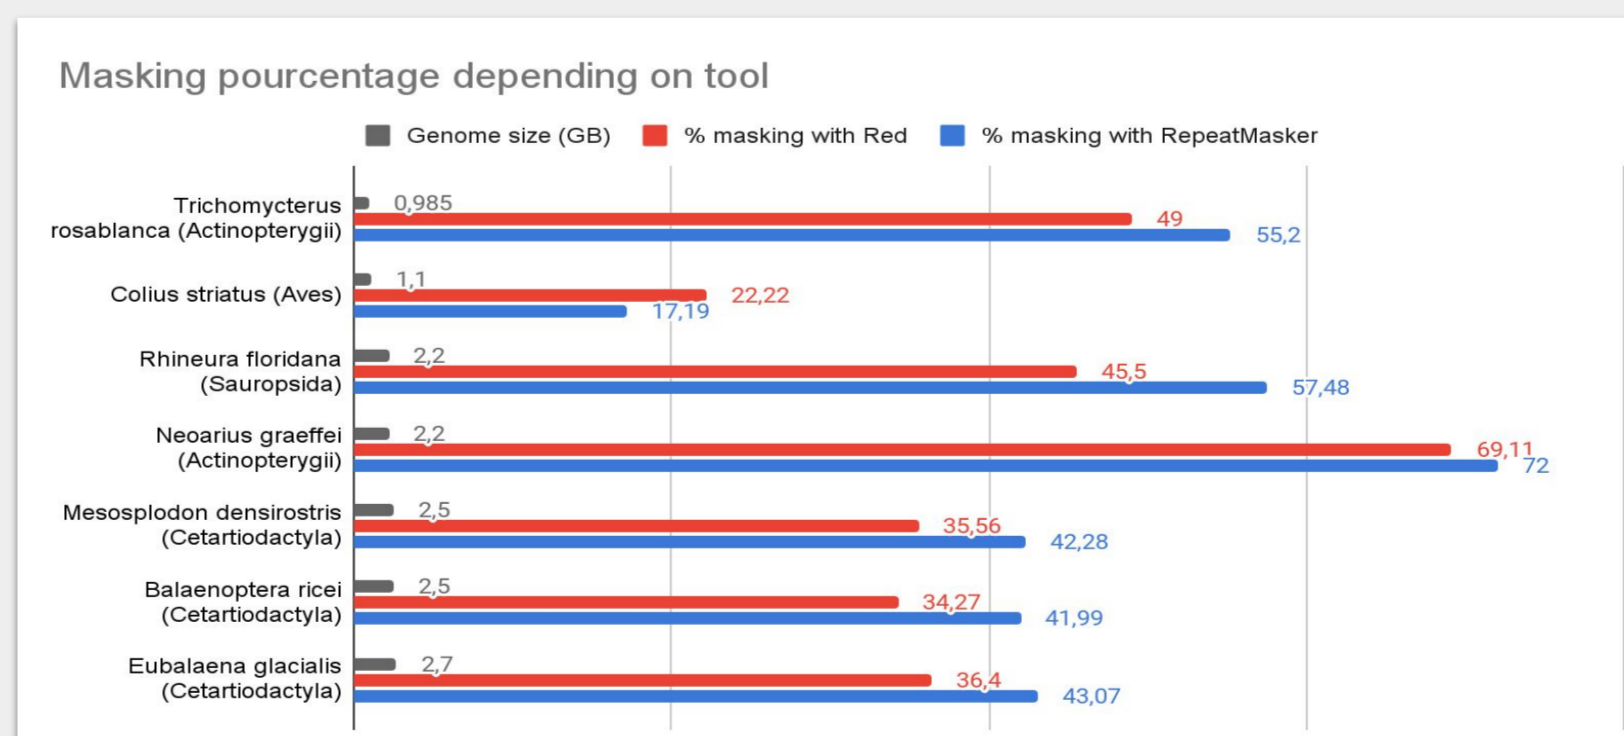

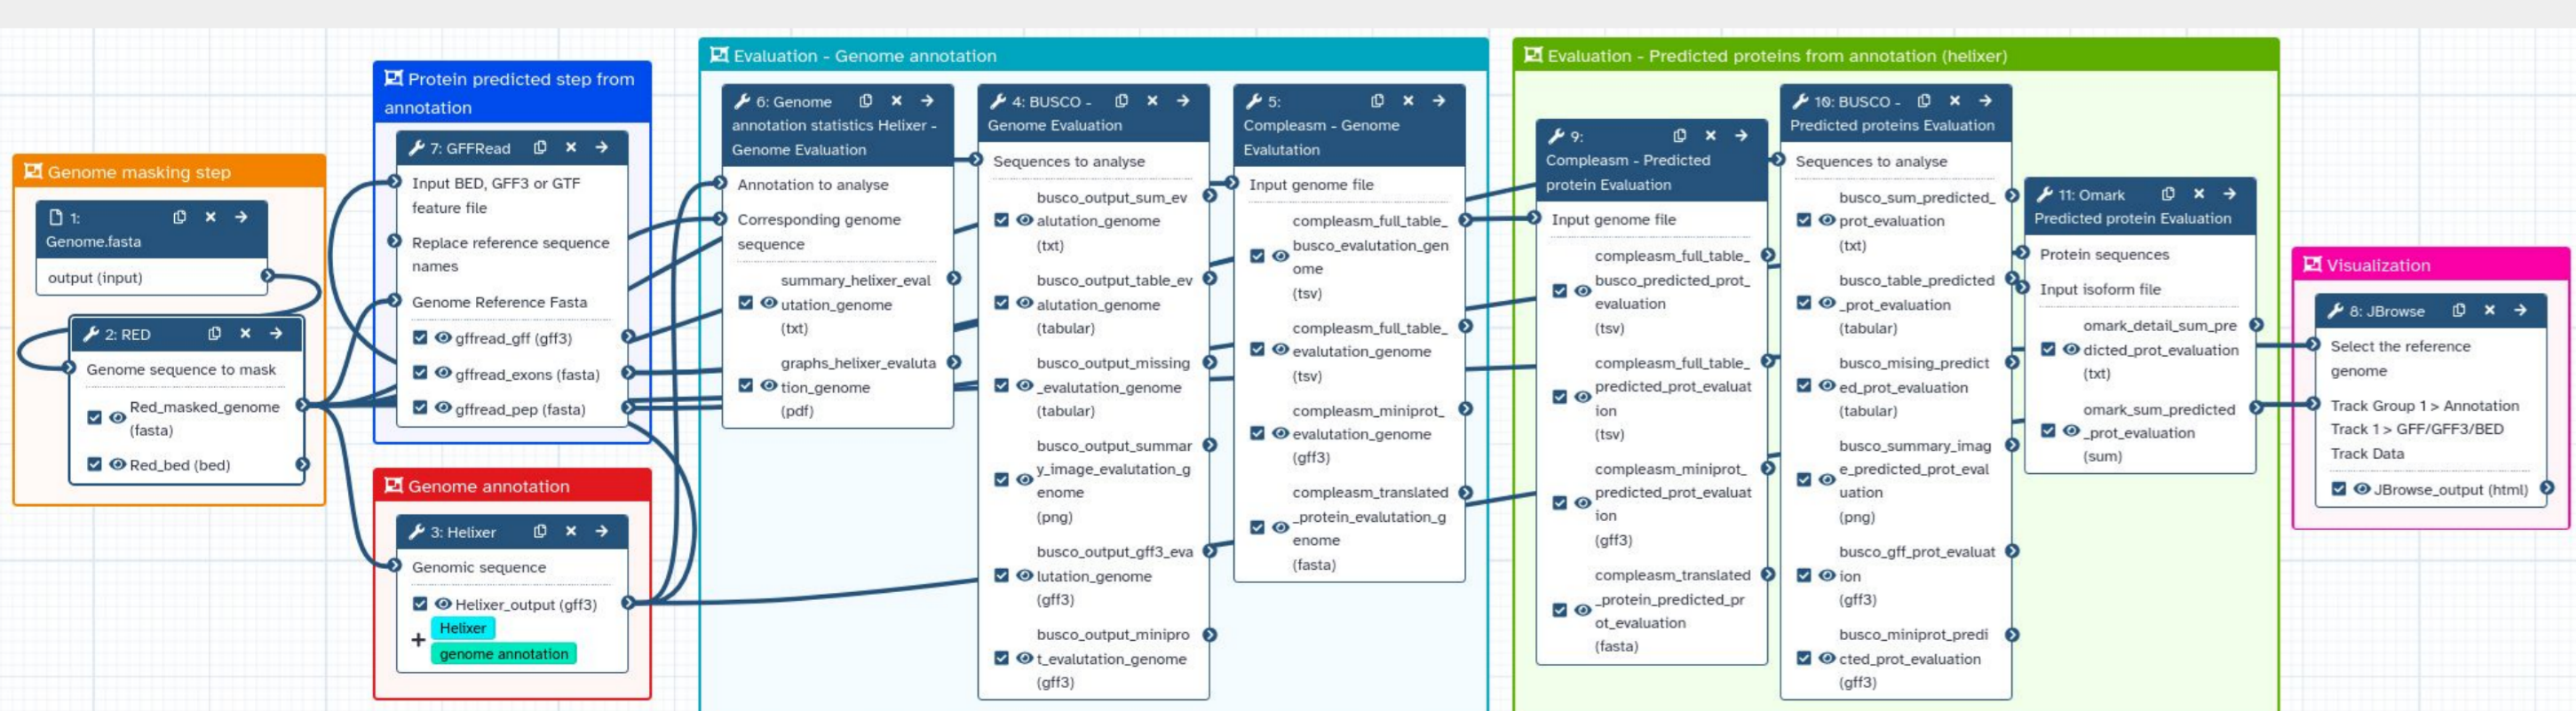

Allow users to integrate available external computing and storage resources on their Galaxy server:

- Bring Your Own Compute (BYOC): plug-in personal Pulsar endpoint
- Bring Your Own Storage (BYOS): plug-in remote storage (read and write)
- Manual selection of job destinations

Biodiversity use case: genome annotation

Large scale genome sequencing project
Earth BioGenome Project (EBP) : VGP, ERGA, ATLASea, ...
 Need for standard genome annotation procedures

- New Galaxy tools (Braker3, Helixer, Compleasm, OMark, ...)
- FAIR Workflows (workflowhub.eu/collections/13)
- Online training materials (training.galaxyproject.org/training-material)

Meta job scheduler to optimise the distribution of jobs, based on:

- Data locality (compute near data)
- Computing resources availability (GPU, CPU, memory)
- User preferences / quotas (computing costs)
- Carbon footprint (PUE, energy mix data, deferred execution)
