Submitted on 7 Nov 2024

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Combined Computer Vision and SDR Transmission on Multicore CPUs

ADRIEN CASSAGNE*, ROMAIN TAJAN AND OLIVIER AUMAGE
* Sorbonne Université, CNRS, LIP6, F-75005, Paris, France

DEMONSTRATION OF A FULL DVB-S2 TRANSCIVER IN SOFTWARE WITH MOTION DETECTION

STREAMPU LANGUAGE & RUNTIME [2]

Domain Specific Embedded Language into C++: Core of the AFF3CT library

- Dedicated to **streaming applications**: Static dataflow graph (mainly)
- **Multithreaded runtime** based on portable C++11 threads
- Pipeline with $1 \rightarrow n$ and $n \rightarrow 1$ **efficient producer-consumer** implem
- **Simplified replication** of parallel stages

HARDWARE SPECIFICATIONS

2× **Minisforum Mercury EM780**

- AMD **Ryzen 7 7840U** CPU
 - 8 × Zen 4 core @ 3.3 GHz
 - TSMC **4nm** FinFET
 - Config. **15 W** to 28 W TDP
- 32 GB of LPDDR5 RAM
- Dimensions: **80×80×43 mm**

2× **Ettus Research USRP B200mini**

- Freq. range: **70 MHz – 6 GHz**
- Max 56 MHz instant. bandwidth
- Prog. Xilinx **Spartan-6** FPGA
- USB 3.0 data & bus-powered
- Dimensions: **83.3×50.8×8.4 mm**

COMPUTER VISION CHAIN

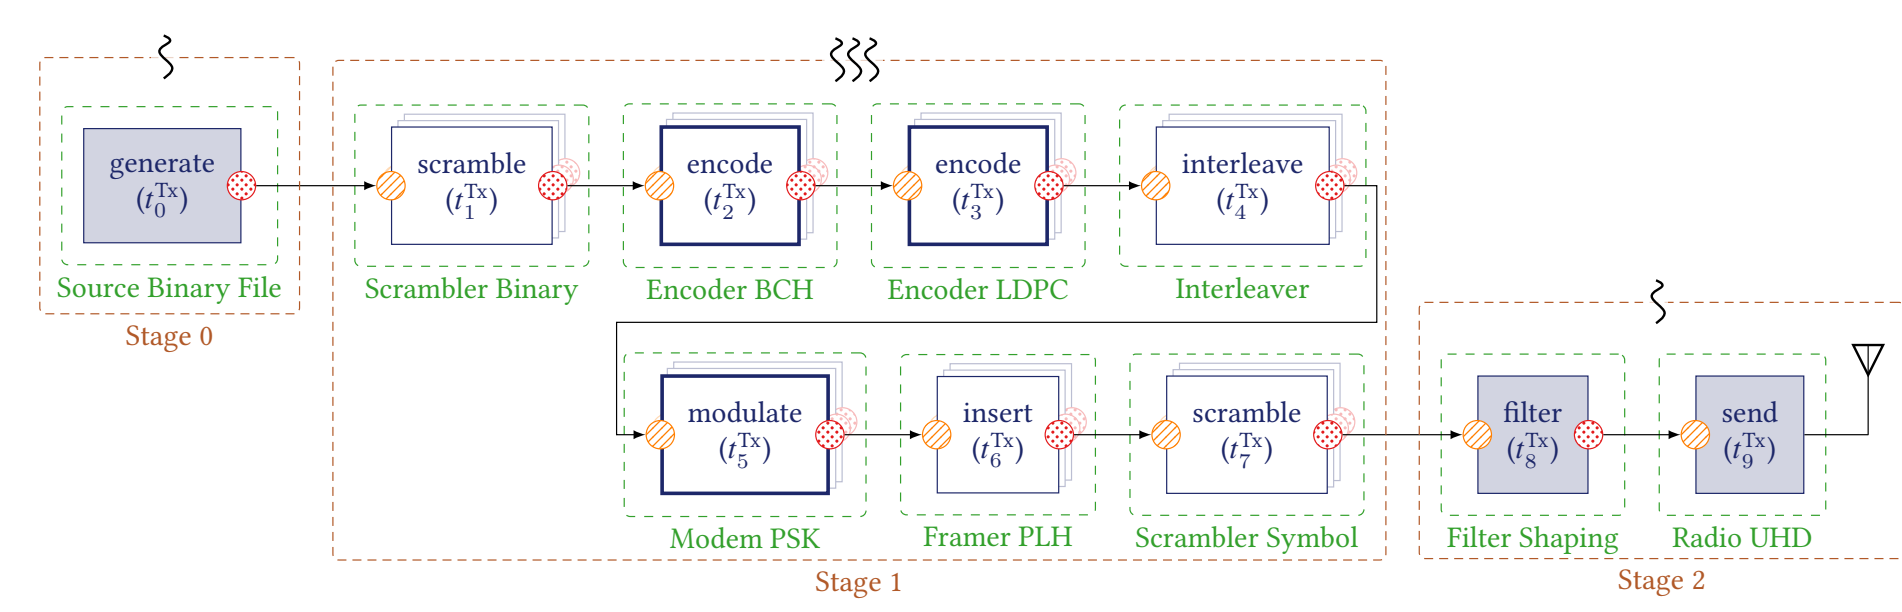

- Σ - Δ (t_1^1): Detects **pixels that moved between two consecutive frames**
 - Strong assumption: **Brightness is constant** and no camera movement
- **Connected-Component Labeling** (t_3^1) is the **most time-consuming part**
 - Efficient **Light Speed Labeling (LSL)** algorithm [3] is used

COMPUTER VISION – MEASURED PERFORMANCE

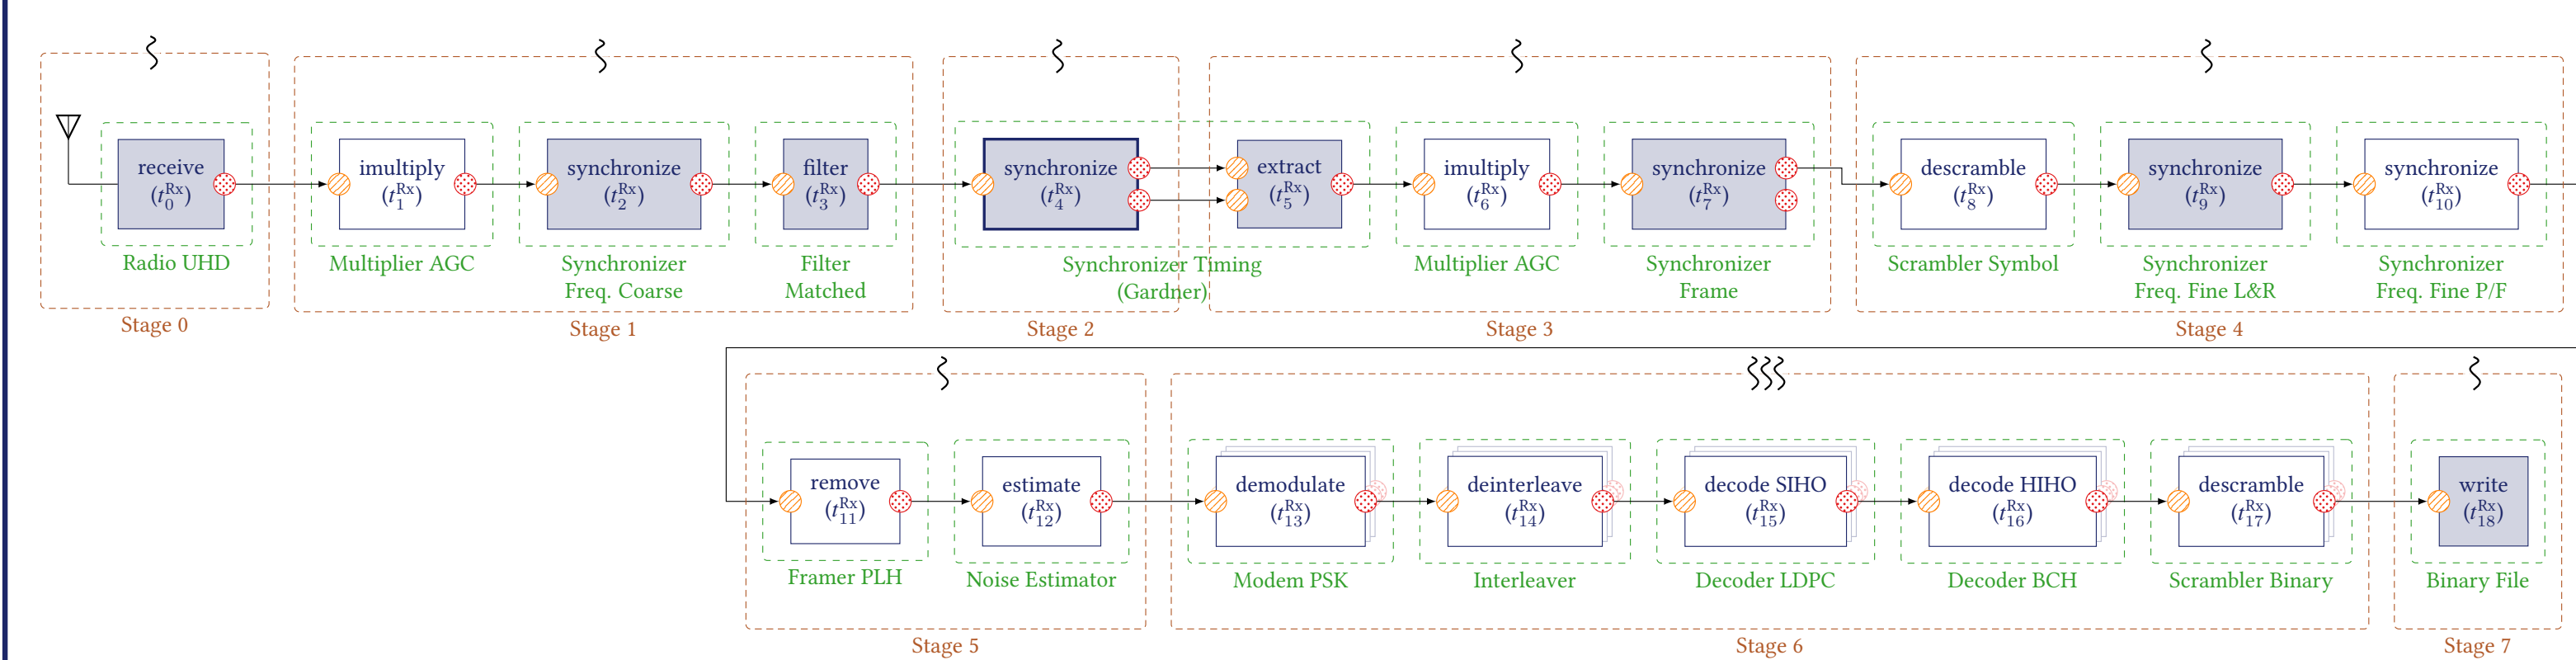

- Frame format: **1920×1080 pixels, 8-bit gray**
- Running on the AMD Ryzen 7 7840U
- Motion detection & object tracking **benefit from multicore CPUs** (without t_{10}^1 task)
 - Up to **148 FPS** on 8 cores
- **BUT the bottleneck is the video encoding**
 - SW enc. **limits to 67 FPS** (with t_{10}^1 task)
 - Idea: Use **HW video encoder** instead

DVB-S2 TRANSMITTER

- **DVB-S2 MODCODs** based on:
 - **BCH + LDPC ECCs** concat. ($N = 16740$)
 - **Phase-Shift Keying (PSK)** modulation
- Implementation over a **3-stage pipeline**
 - Vectorized with the **MIPP SIMD wrapper** [4] to guarantee **portability & efficiency**

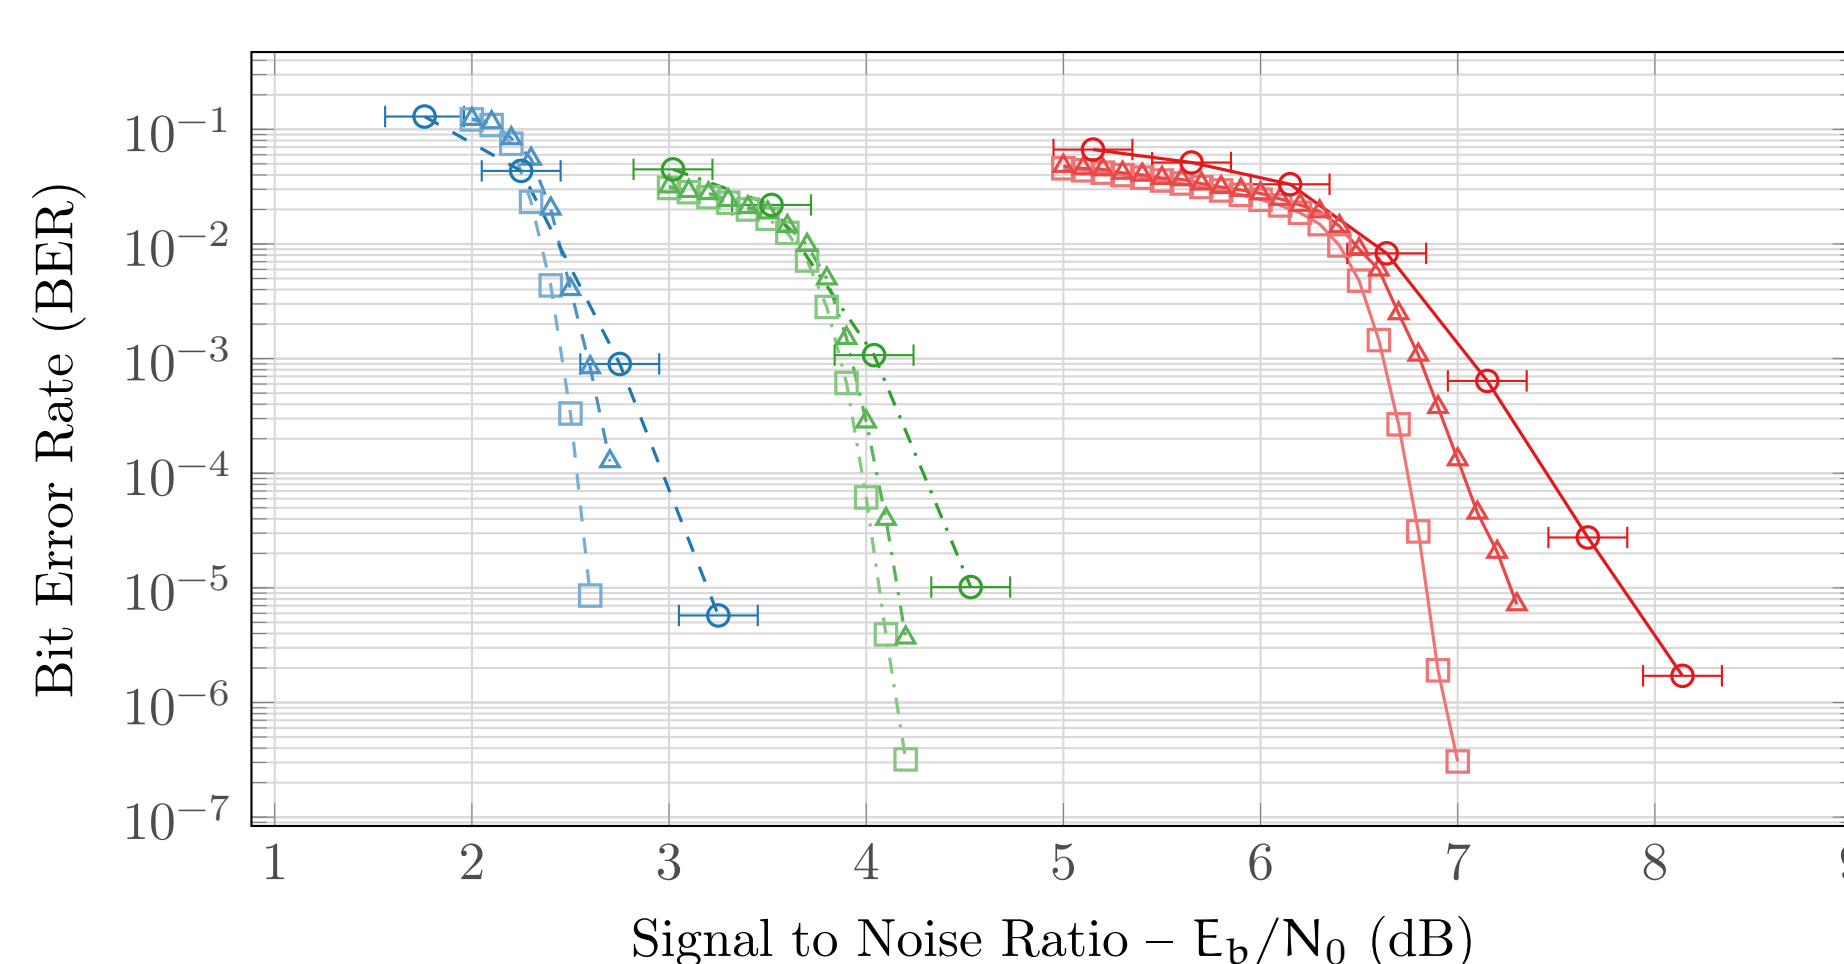

DVB-S2 RECEIVER – TRANSMISSION PHASE

- n -stage pipeline
- **Automatic scheduling with OTAC** [5]
- **Sync. timing** (t_4^{Rx}) is the **limiting task**

DVB-S2 RECEIVER – MEASURED PERFORMANCE

Configuration	Information Throughput (Mb/s)								Latency (ms)			
	Sequential				Parallelized with STREAMPU							
	Xeon	ThunderX2	M1 Ultra	Ryzen 7	Xeon	ThunderX2	M1 Ultra	Ryzen 7	Xeon	ThunderX2	M1 Ultra	Ryzen 7
MODCOD 1	3.4	1.0	5.9	8.5	37	19	33	37	–	37	6.3	8.8
MODCOD 2	4.1	1.4	7.0	11.6	55	28	51	55	56	41	8.0	9.6
MODCOD 3	4.0	1.1	5.6	12.0	80	42	71	71	–	51	10.1	9.3

Configuration	AWGN	AWGN+	Real
MODCOD 1, QPSK, R = 3/5	—□—	—△—	—○—
MODCOD 2, QPSK, R = 8/9	—□—	—△—	—○—
MODCOD 3, 8-PSK, R = 8/9	—□—	—△—	—○—

- **Portable implem.** on x86 & ARM CPUs
- **SDR flexibility:** Multiple MODCODs
- Up to **80 Mb/s** on Intel Xeon Platinum 8168
