HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

JN15 – Digital Twins for Assessing, Managing, and Improving the R³ of Critical Systems

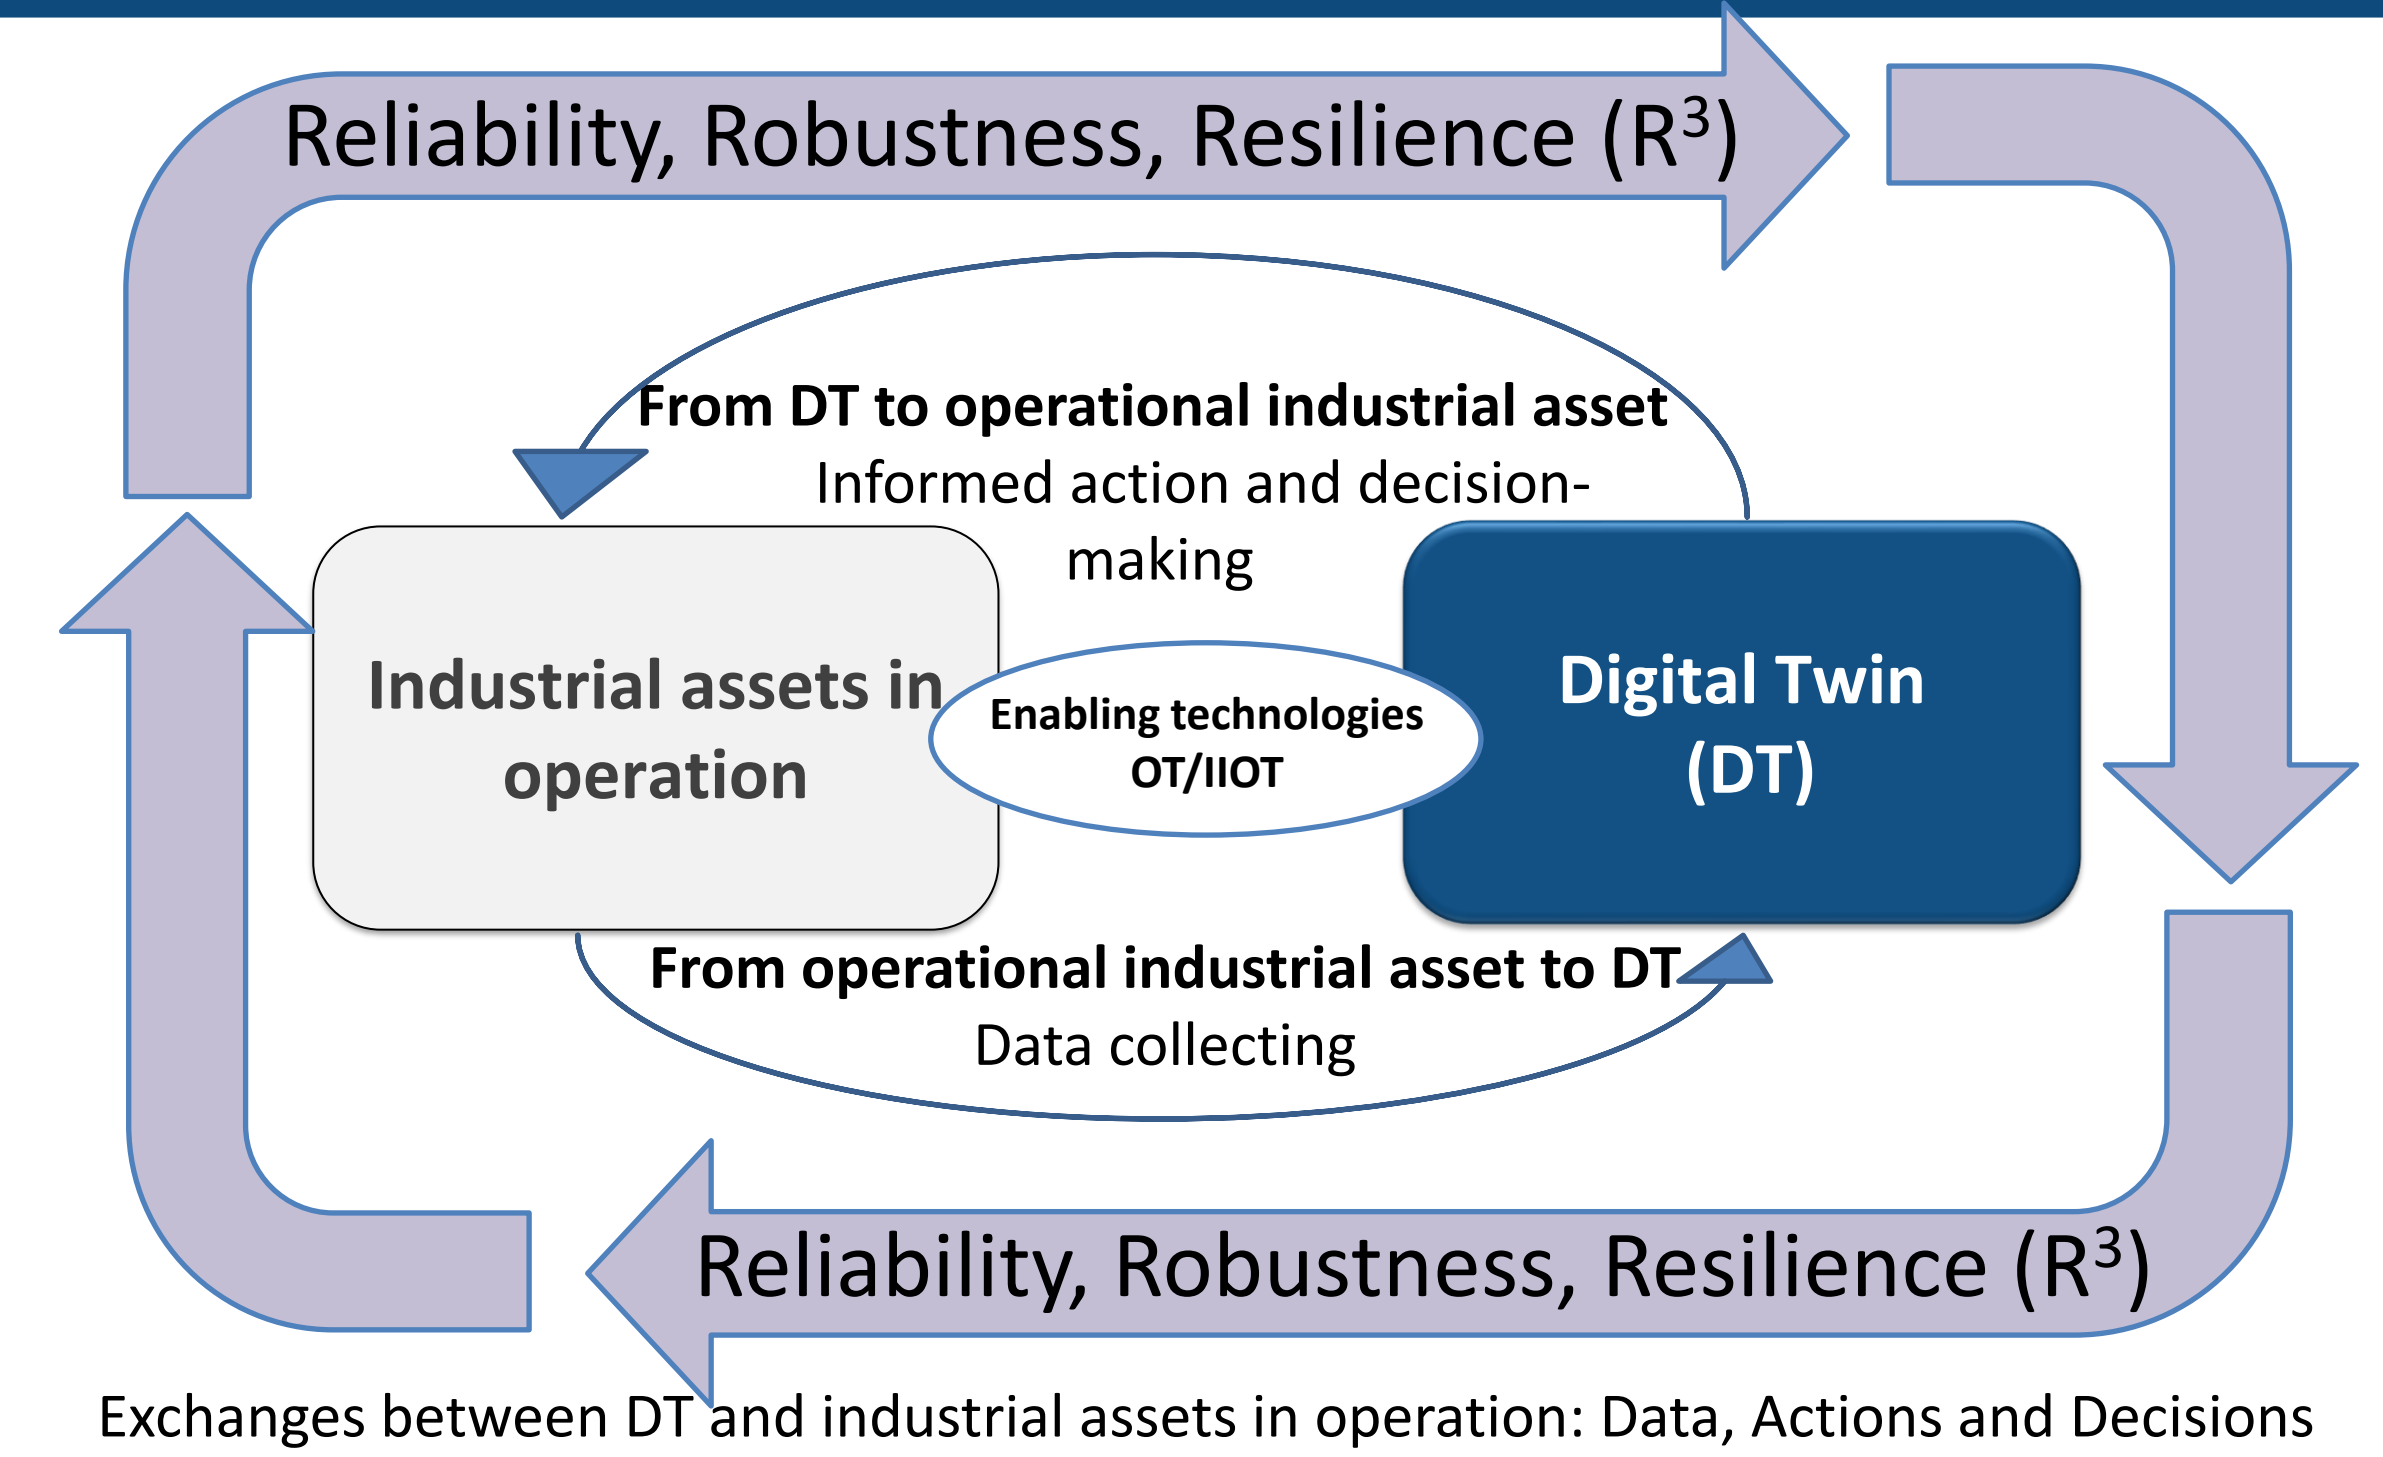

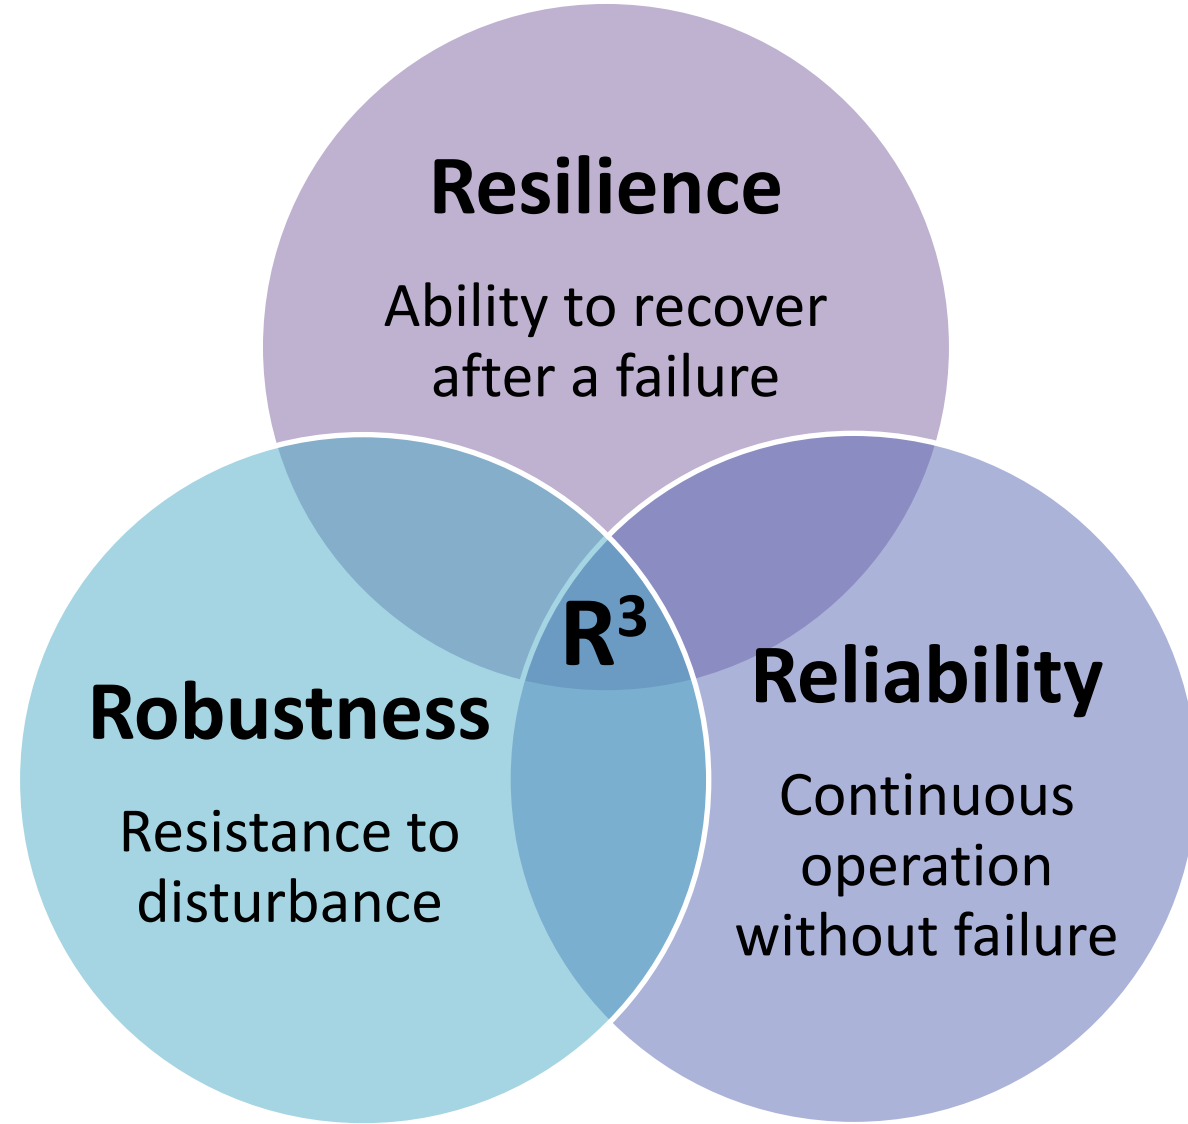

Dynamic Uncertainty Management in Digital Twin Engineering for Enhancing the Robustness and Resilience of Industrial Systems

Bouthayna EL Bouzaidi Tiali ^{a,b}, Achraf Kallel ^a, Stephen Creff ^a, Nabil Anwer ^{a,b}

a: IRT SystemX, b: Laboratoire Universitaire de Recherche en Production Automatisée, ENS Paris-Saclay / Université Paris-Saclay

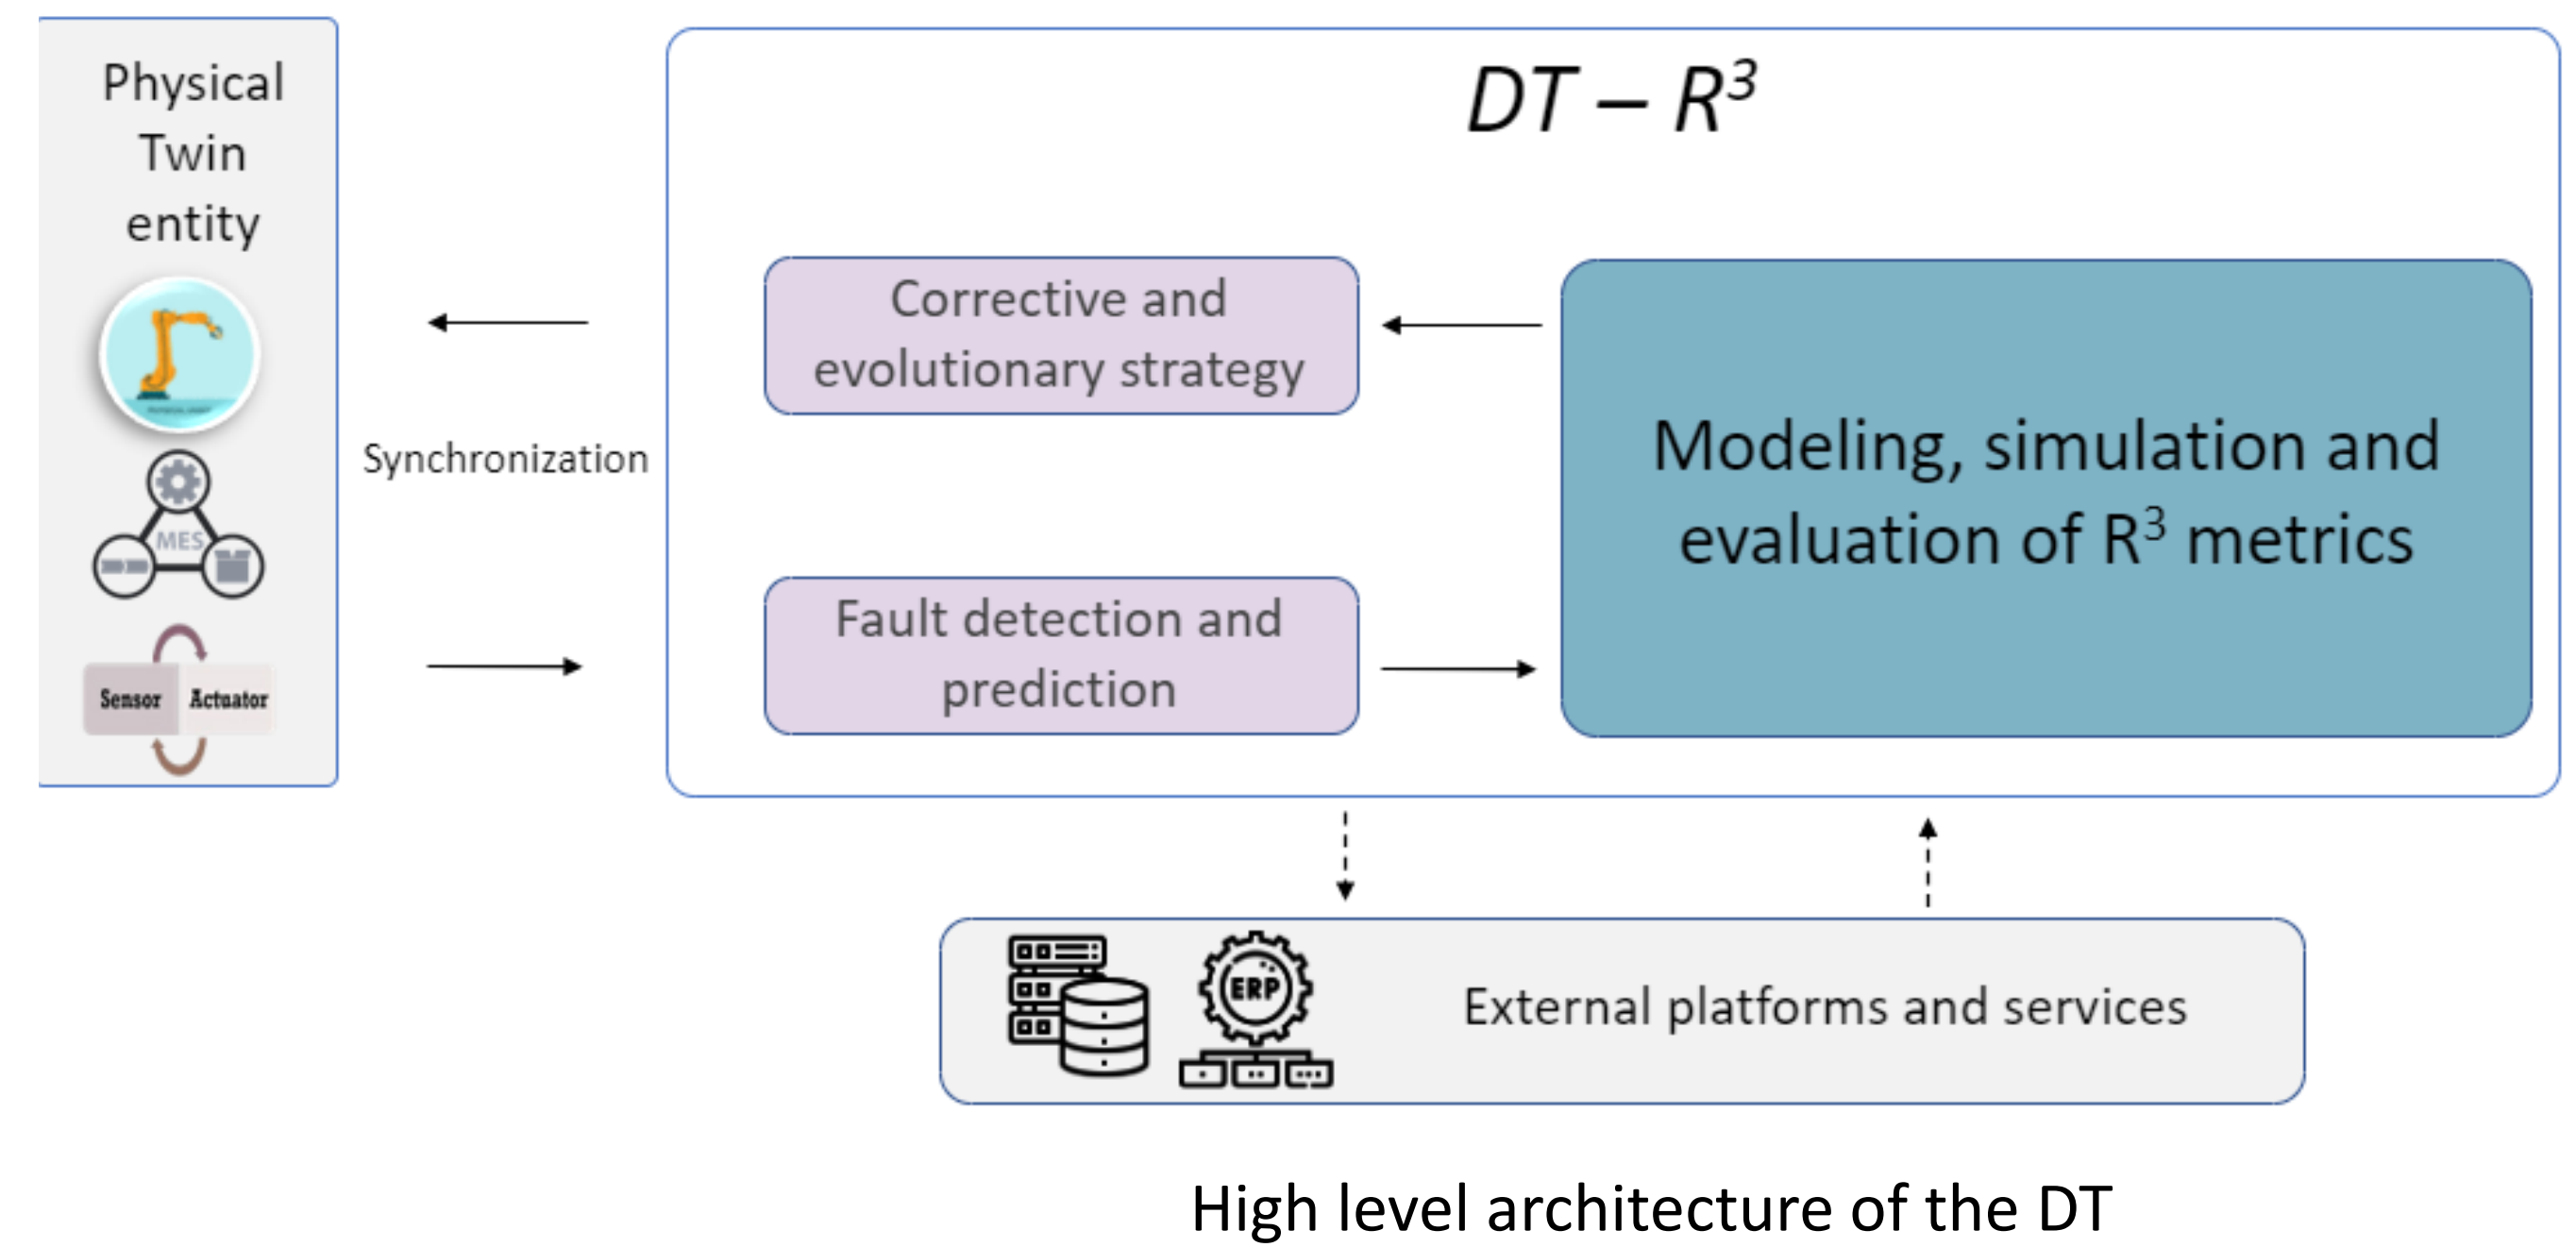

Context and objectives

Improving the R³: Reliability, Robustness and Resilience of Critical Systems.

Challenges

- Define R³ metrics for analysis and evaluation.
- Develop R³ KPIs.
- Identify the causes of deviations/degradations.
- Integrate the propagation of events/failures.
- Simulate disruptive/hostile events.
- Manage interoperability, uncertainty and risk.
- Implement DT-R³ for specific use cases.

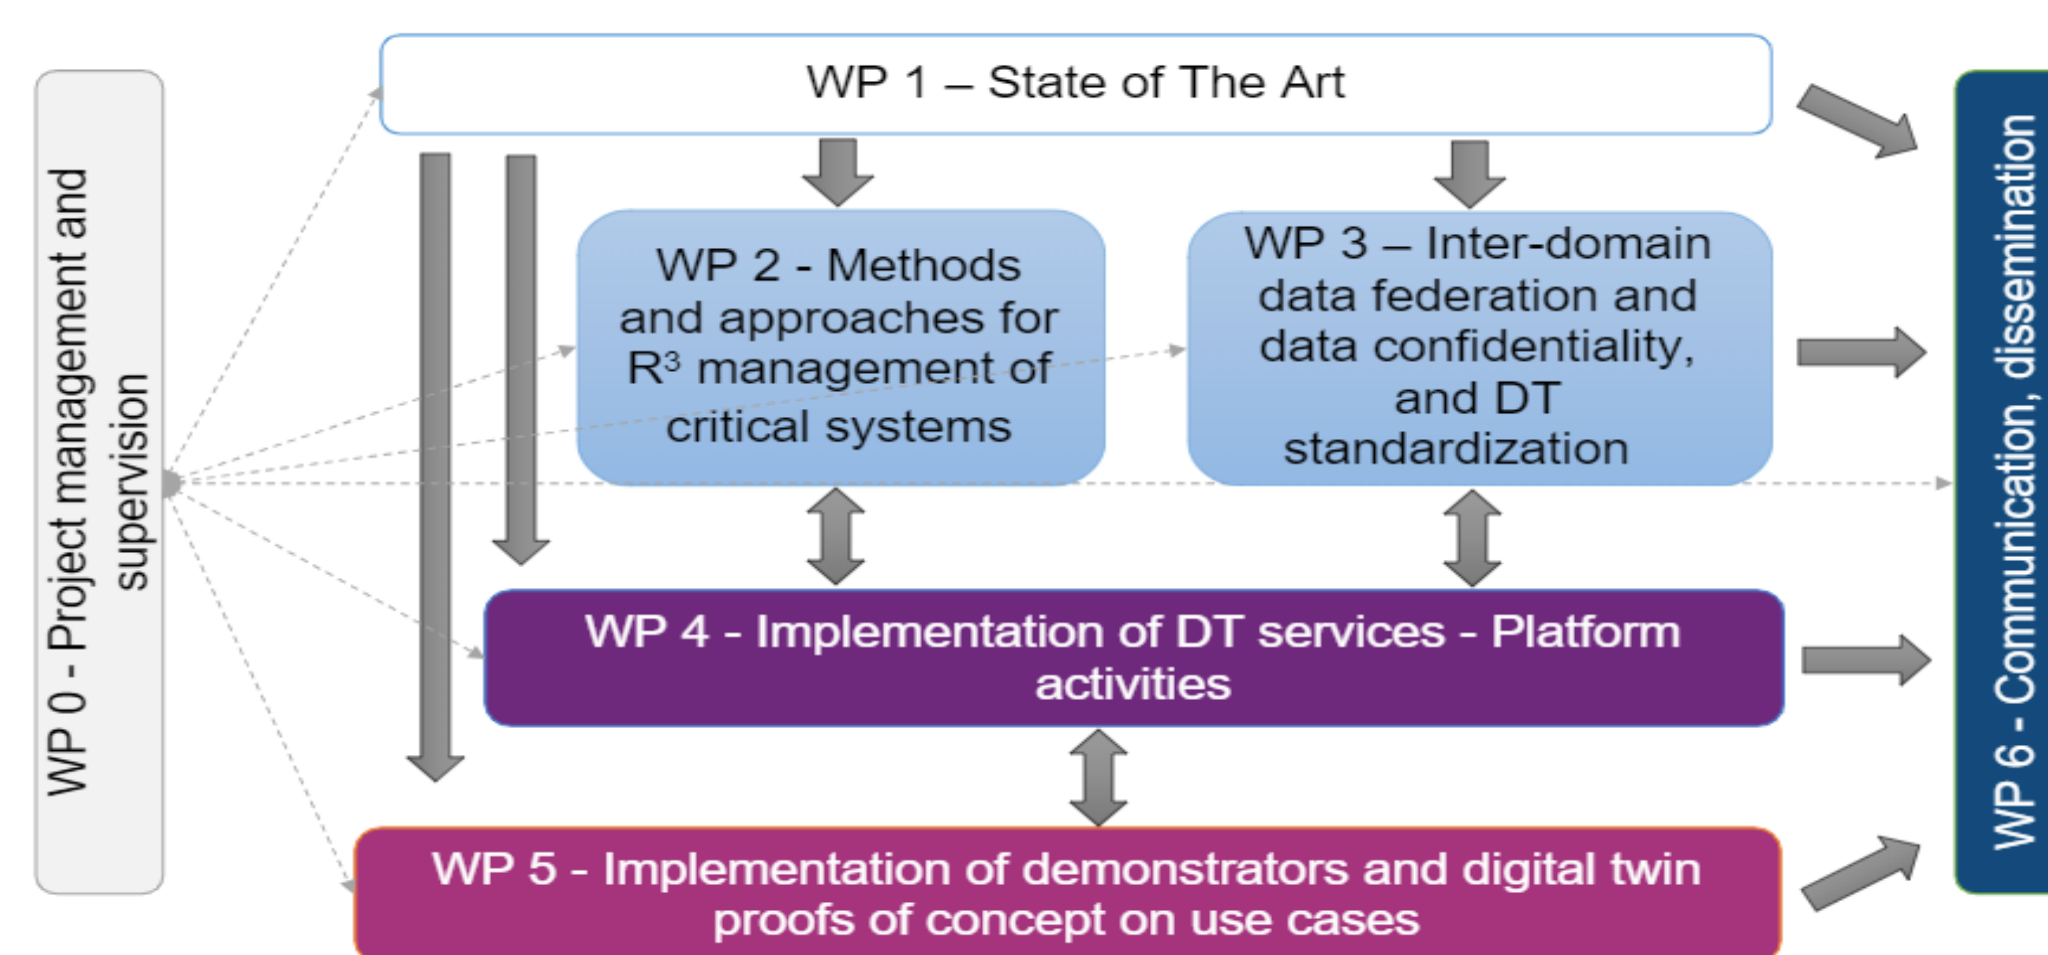

Project Details, Work Packages and Use Cases

Launch September 2024
Durations 4 Years

Partners

Project activities

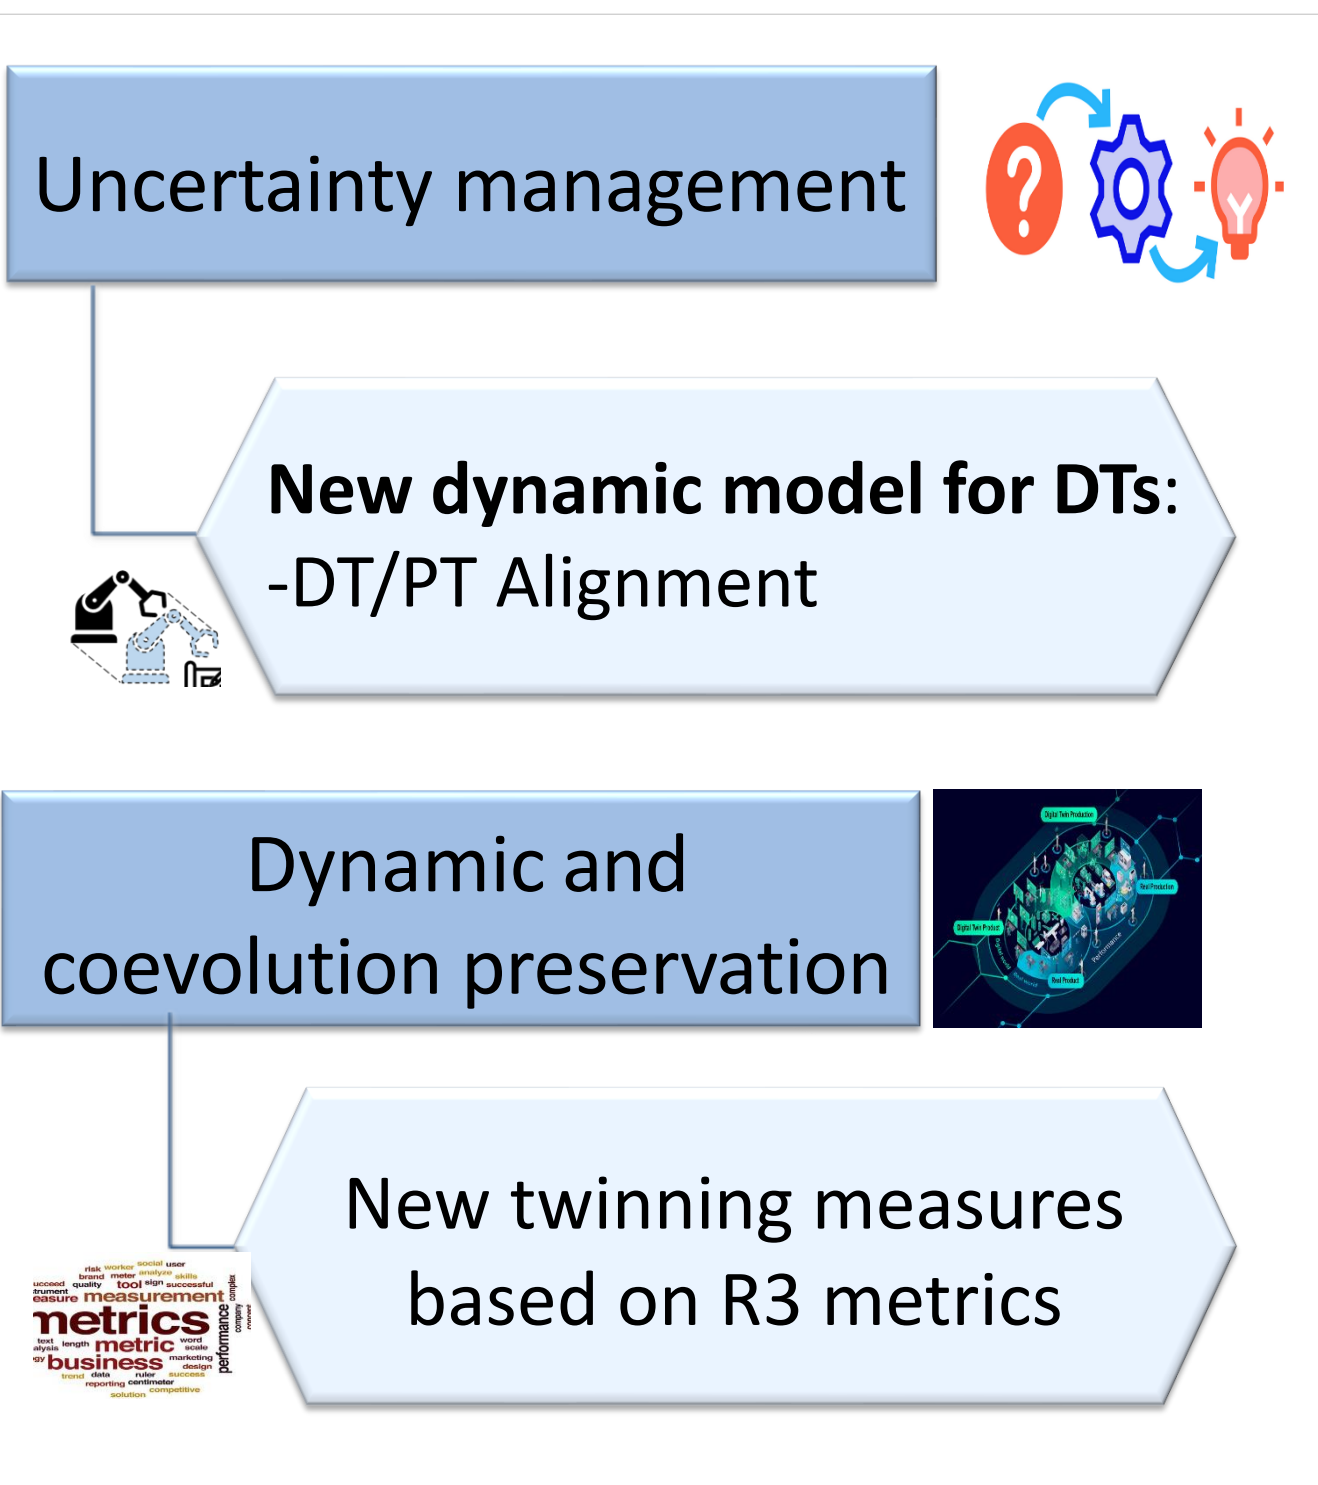

Use cases

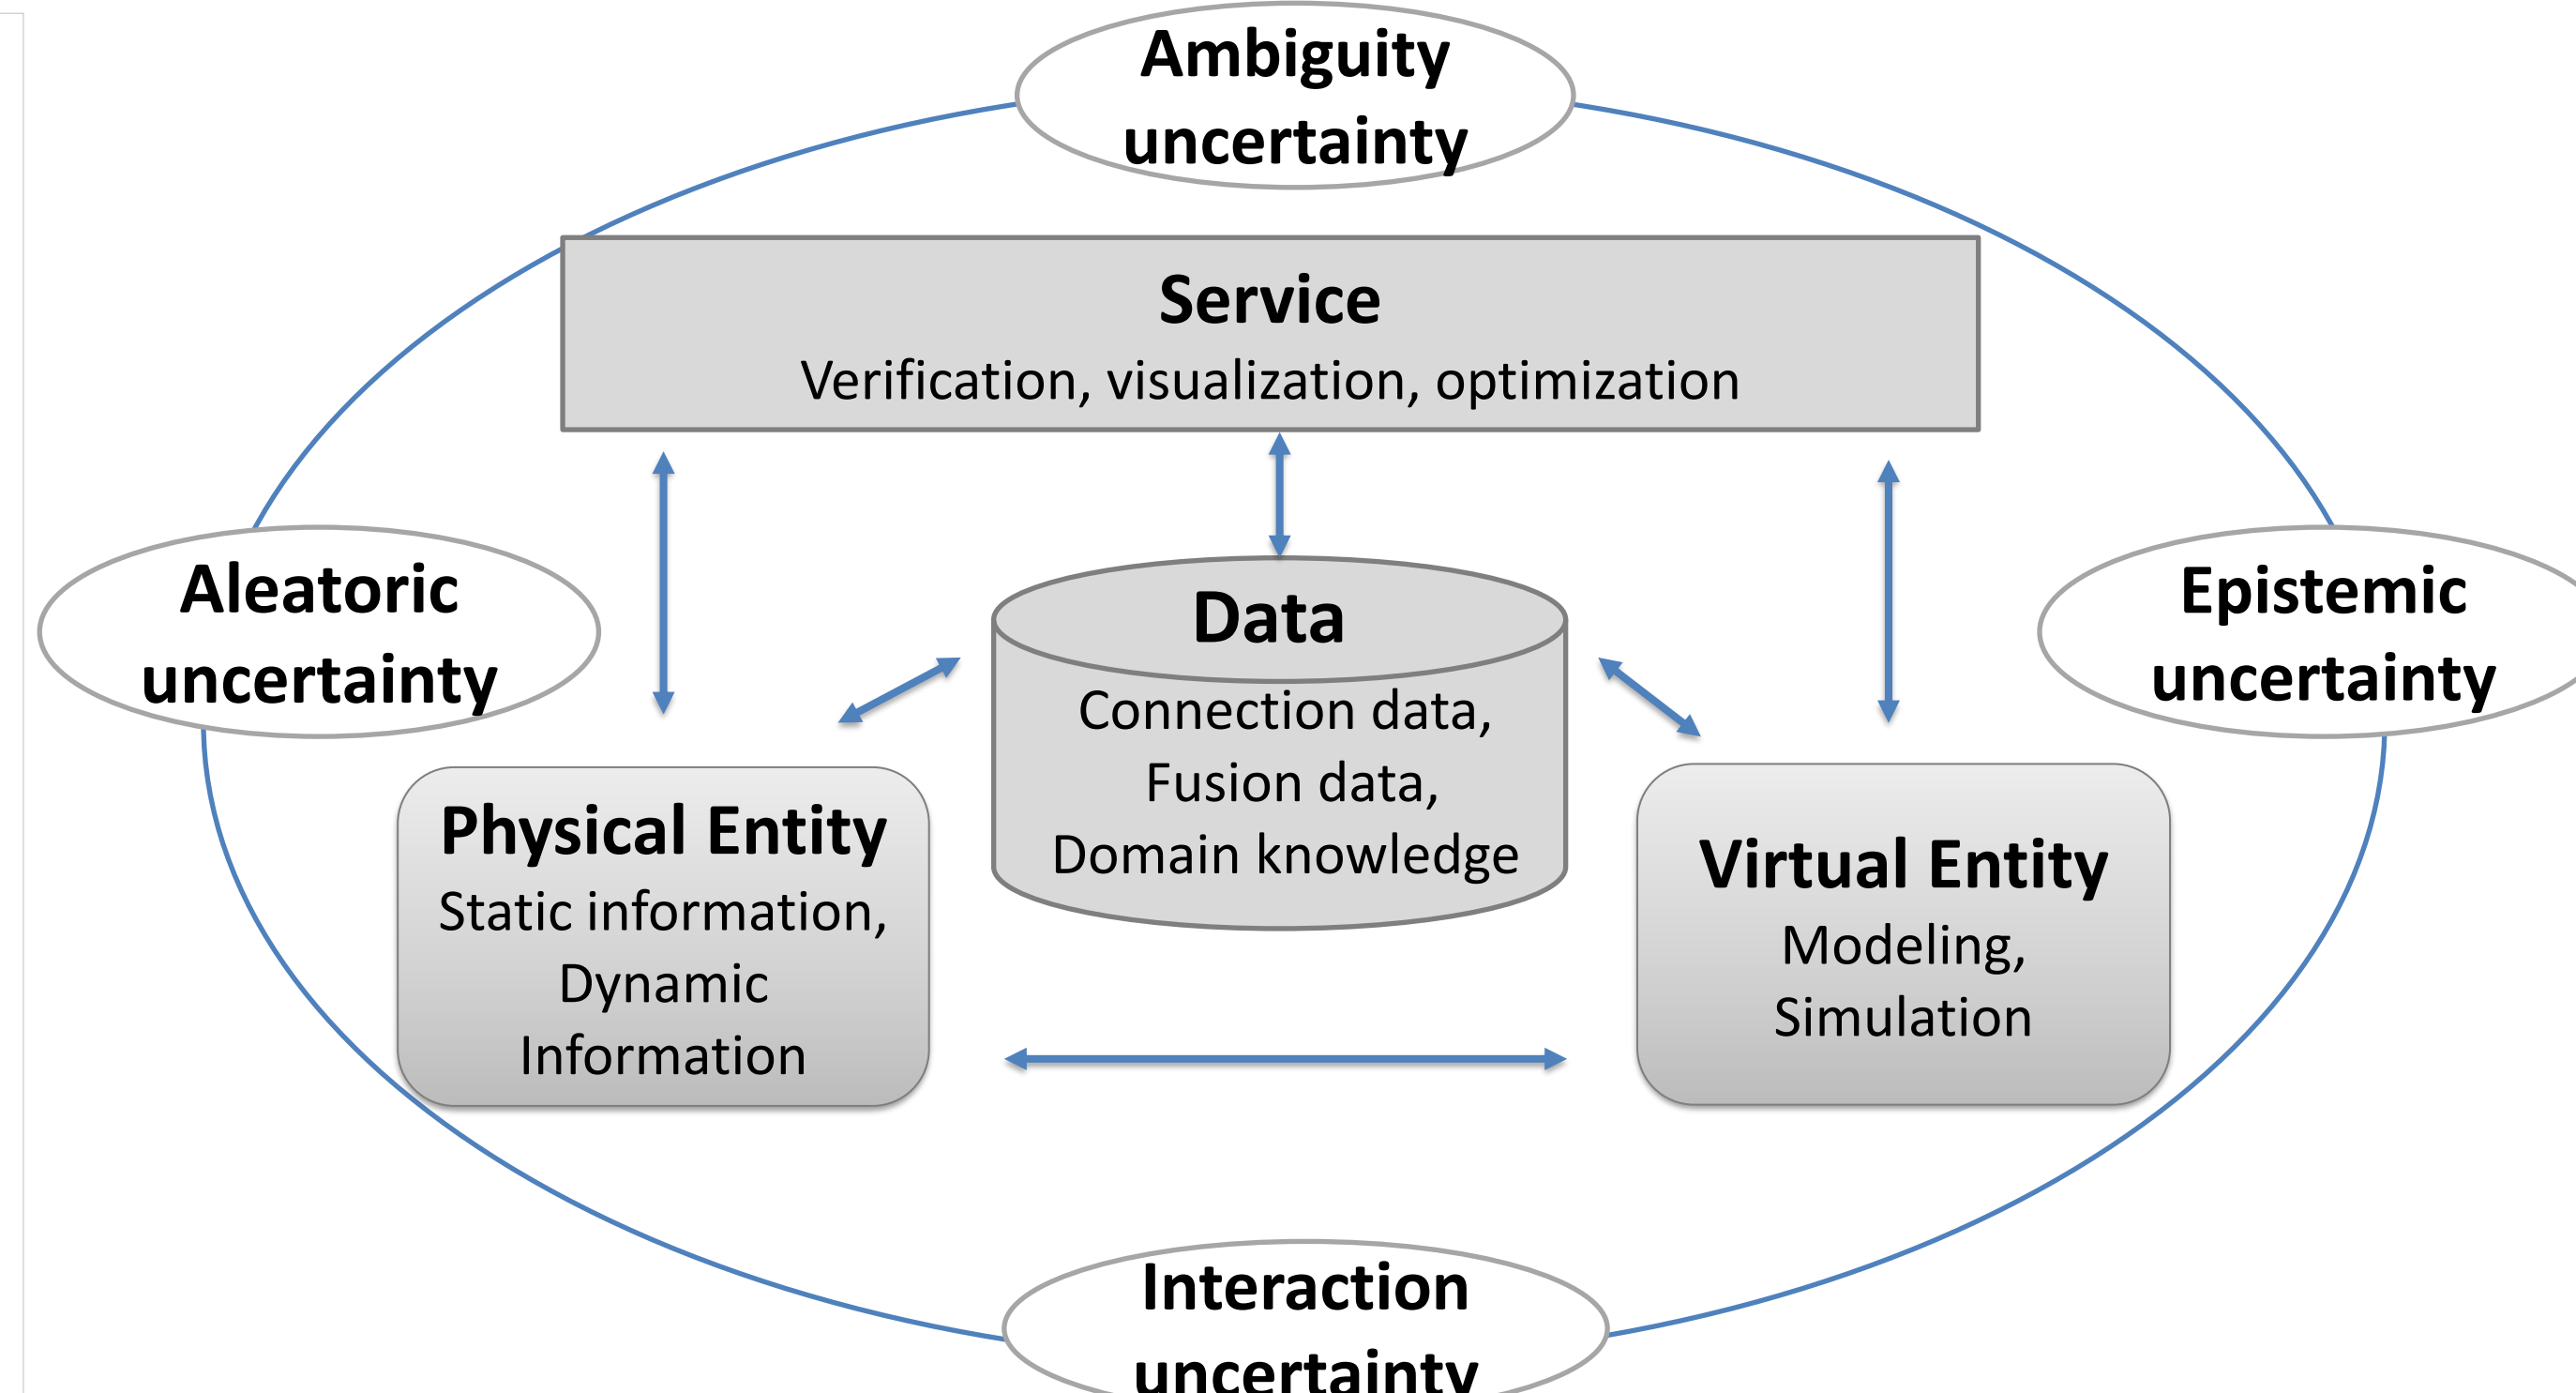

- DT for cyber resilience of critical system.
- DT for aircraft engine lifecycle.

Dynamic Uncertainty Management in Digital Twin Engineering: Enhancing the Robustness and Resilience of Industrial Systems

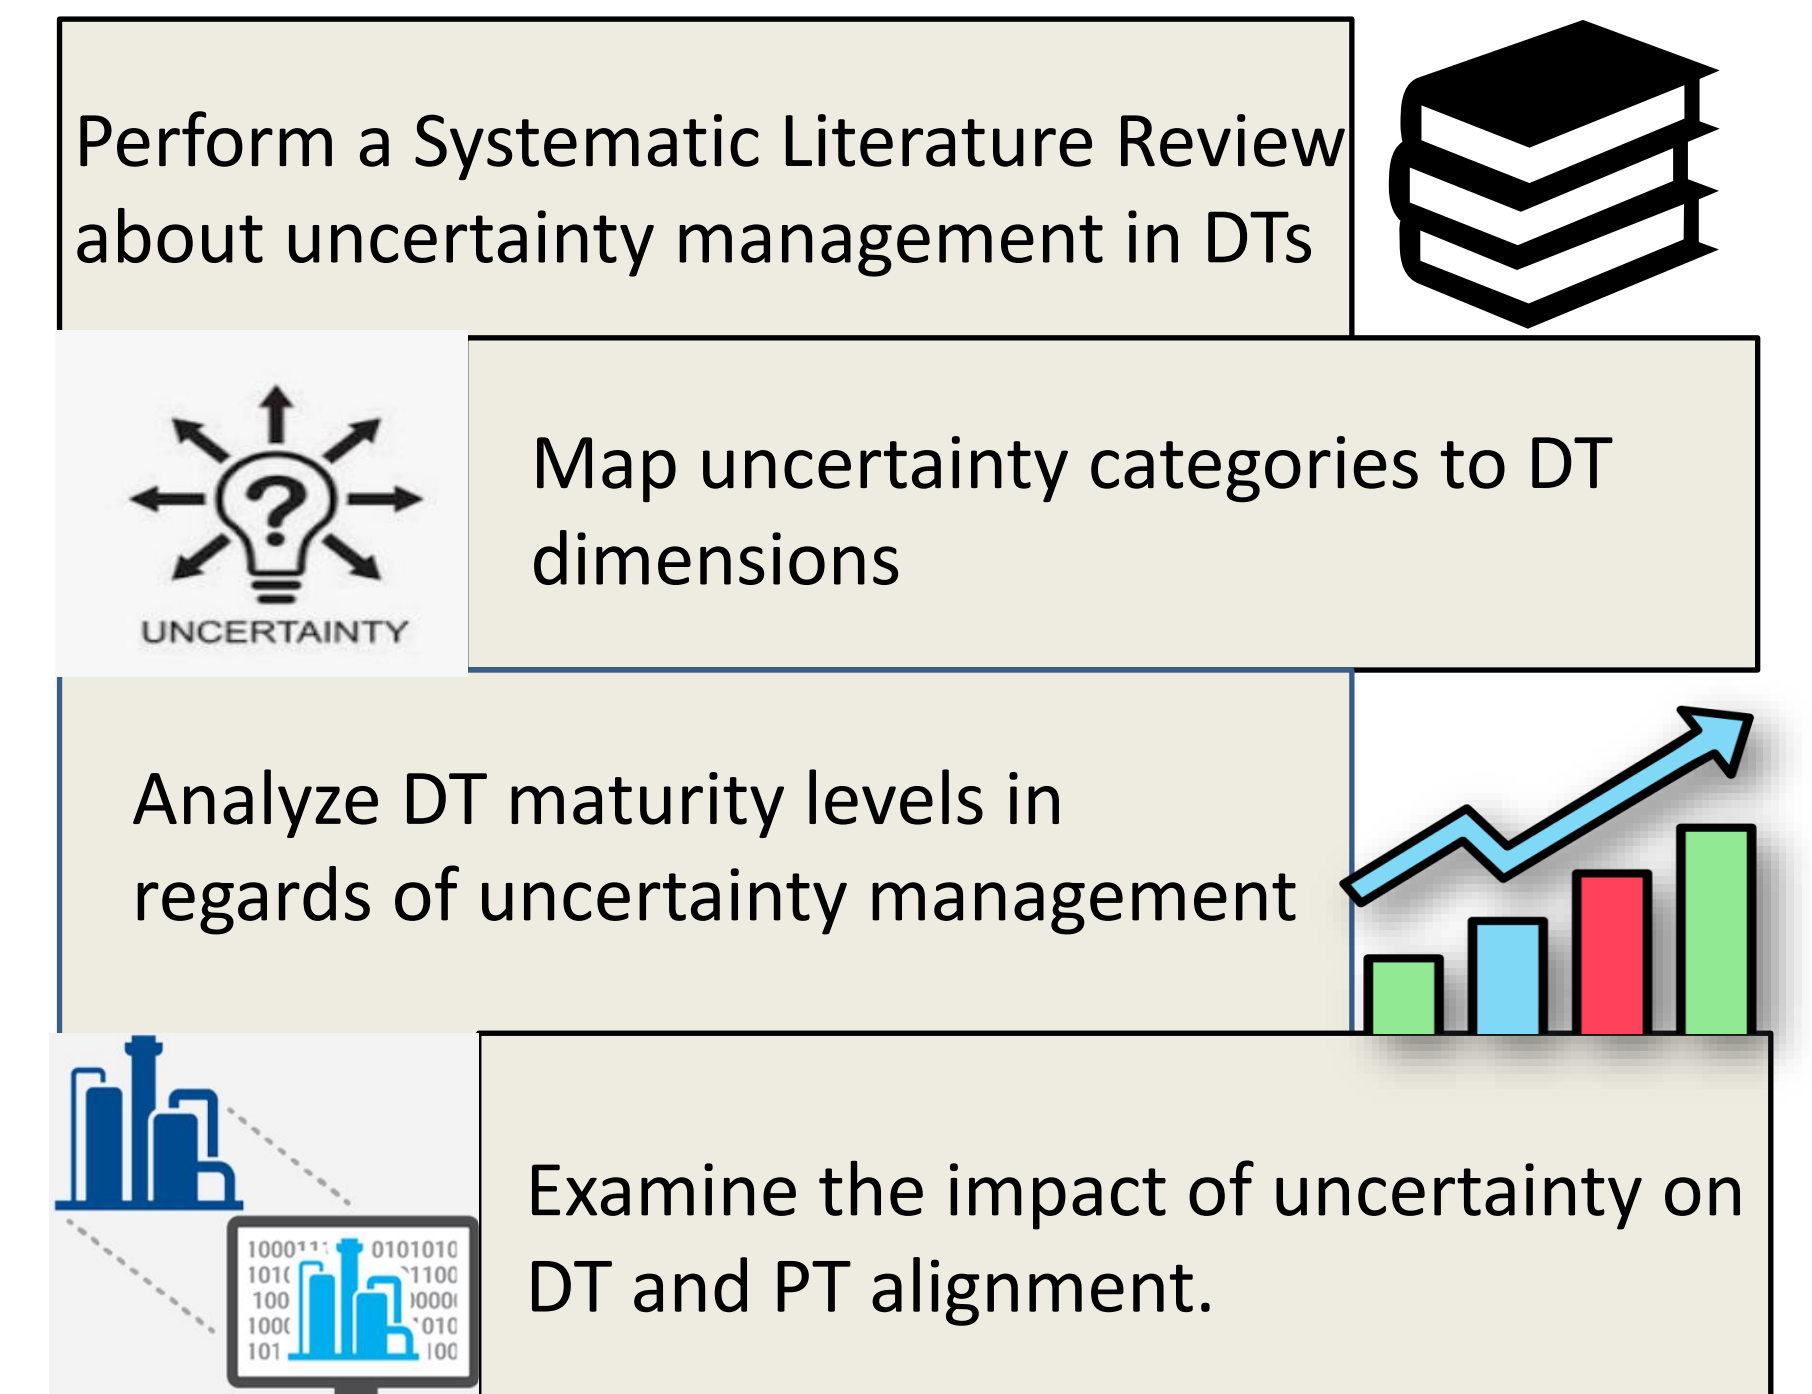

Why ?

What ?

How?

This work has been supported by the French government under the "France 2030" program, as part of the SystemX Technological Research Institute within the JN15 project
