

Legends (appendixes) *Quantifying physician's bias to terminate resuscitation. The TERMINATOR Study*

Figures

- Figure 3: Distribution of scaled residuals after quantile normalization. The black line corresponds to an ideal normal distribution and the histogram to the repartition observed.

Tables

- Table 3: Odds-ratio of random effect depending on chosen fixed factors.
- Table 4: Concurrent models. Conditional R^2 gives the overall performance of the model.
- Table 5: Coefficients value with or without quadratic terms for continuous values.
